## SP500

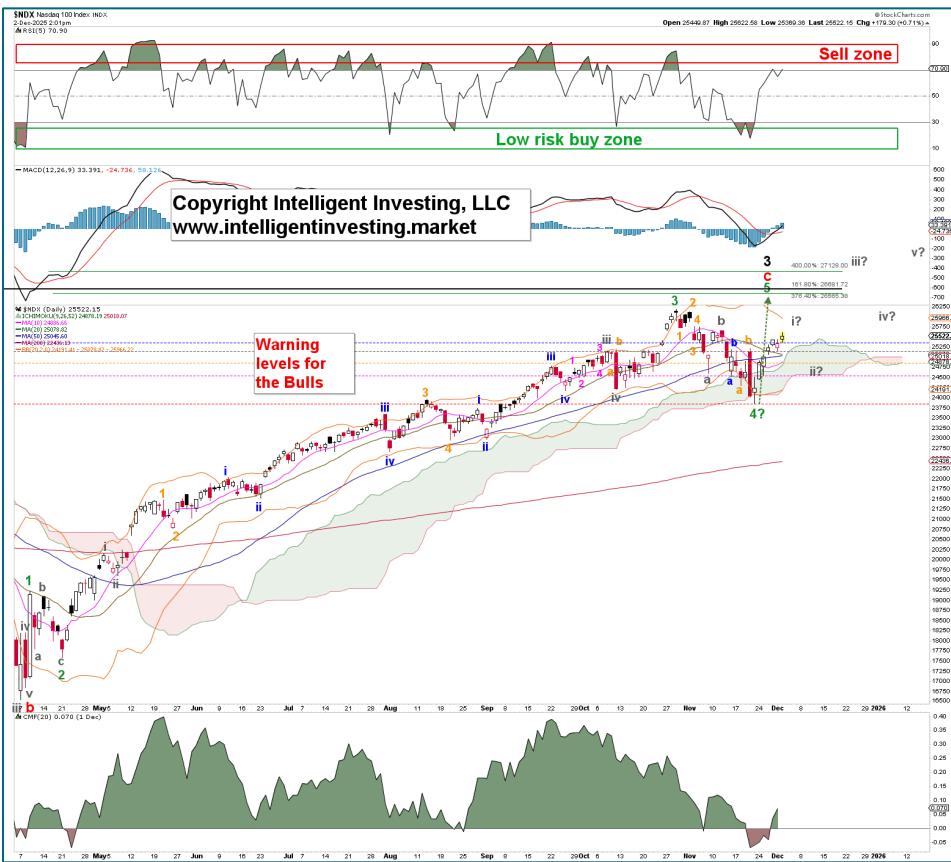

Continued upside = no change from last week, and our primary view remains correct until proven otherwise, in that the **W-5** to 7210+ is underway. The Bull's warning levels remain at: **6819, 6765, 6659, 6521**.

Meanwhile, the hourly chart now has enough scribbles to detail the current advance. See below. It follows that the 3<sup>rd</sup> of the 3<sup>rd</sup> wave recently topped, right at the 161.80% extension of the (blue) 1<sup>st</sup> wave, measured from the (blue) 2<sup>nd</sup> wave's low.

The question is whether the current rally, which clearly looks impulsive, will be the entire **W-5** or only **W-i** of **W-5**. TBD. For now, we expect the current sideways, triangle-like price action (blue **W-iv**) to resolve higher, ideally to 6885+/-15, followed by the orange **W-4** to ideally 6805+/-20, and a final **W-5** to ideally 6940+/-20, possibly as high as 7040+/-20. In the latter case, the index will have come close to the ideal 7120 target for the (much) larger black **W-4**.

The Bull's warning levels for the short-term are set at: **6800, 6738, 6660, 6597**, and **6521**. Note that we now have four warning levels, reducing the odds of continued upside by 20% for each breached level

# NASDAQ100

Continued upside = No change from last week, and the primary view remains that the **W-5** to 26800+ is underway. The Bull's warning levels are raised to: **25369**, **25158**, **24873**, **24542**, and **23854**.

The question is whether the current rally, which clearly looks impulsive, will be the entire **W-5** or only **W-i** of **W-5**. TBD.

Meanwhile, the hourly chart now has enough scribbles to detail the current advance. See below. It follows that the 3<sup>rd</sup> of the 3<sup>rd</sup> wave recently topped, right at the 161.80% extension of the (blue) 1<sup>st</sup> wave, measured from the (blue) 2<sup>nd</sup> wave's low.

For now, we expect an ending diagonal-like advance for the blue **W-v** to ideally ~26635, followed by the orange **W-4** to ideally 25300+/-100, and a final **W-5** to complete **W-iii** at ideally 25900+/-100, etc. The ideal **W-v** target zone is \$26500+/250, which will get the index close to the ideal ~26800 target for the (much) larger black **W-4**.

The Bull's warning levels for the short-term are set at: **25443**, **25158**, **24542**, **24214**, and **23854**.

Note that we now have four warning levels, reducing the odds of continued upside by 20% for each breached level.

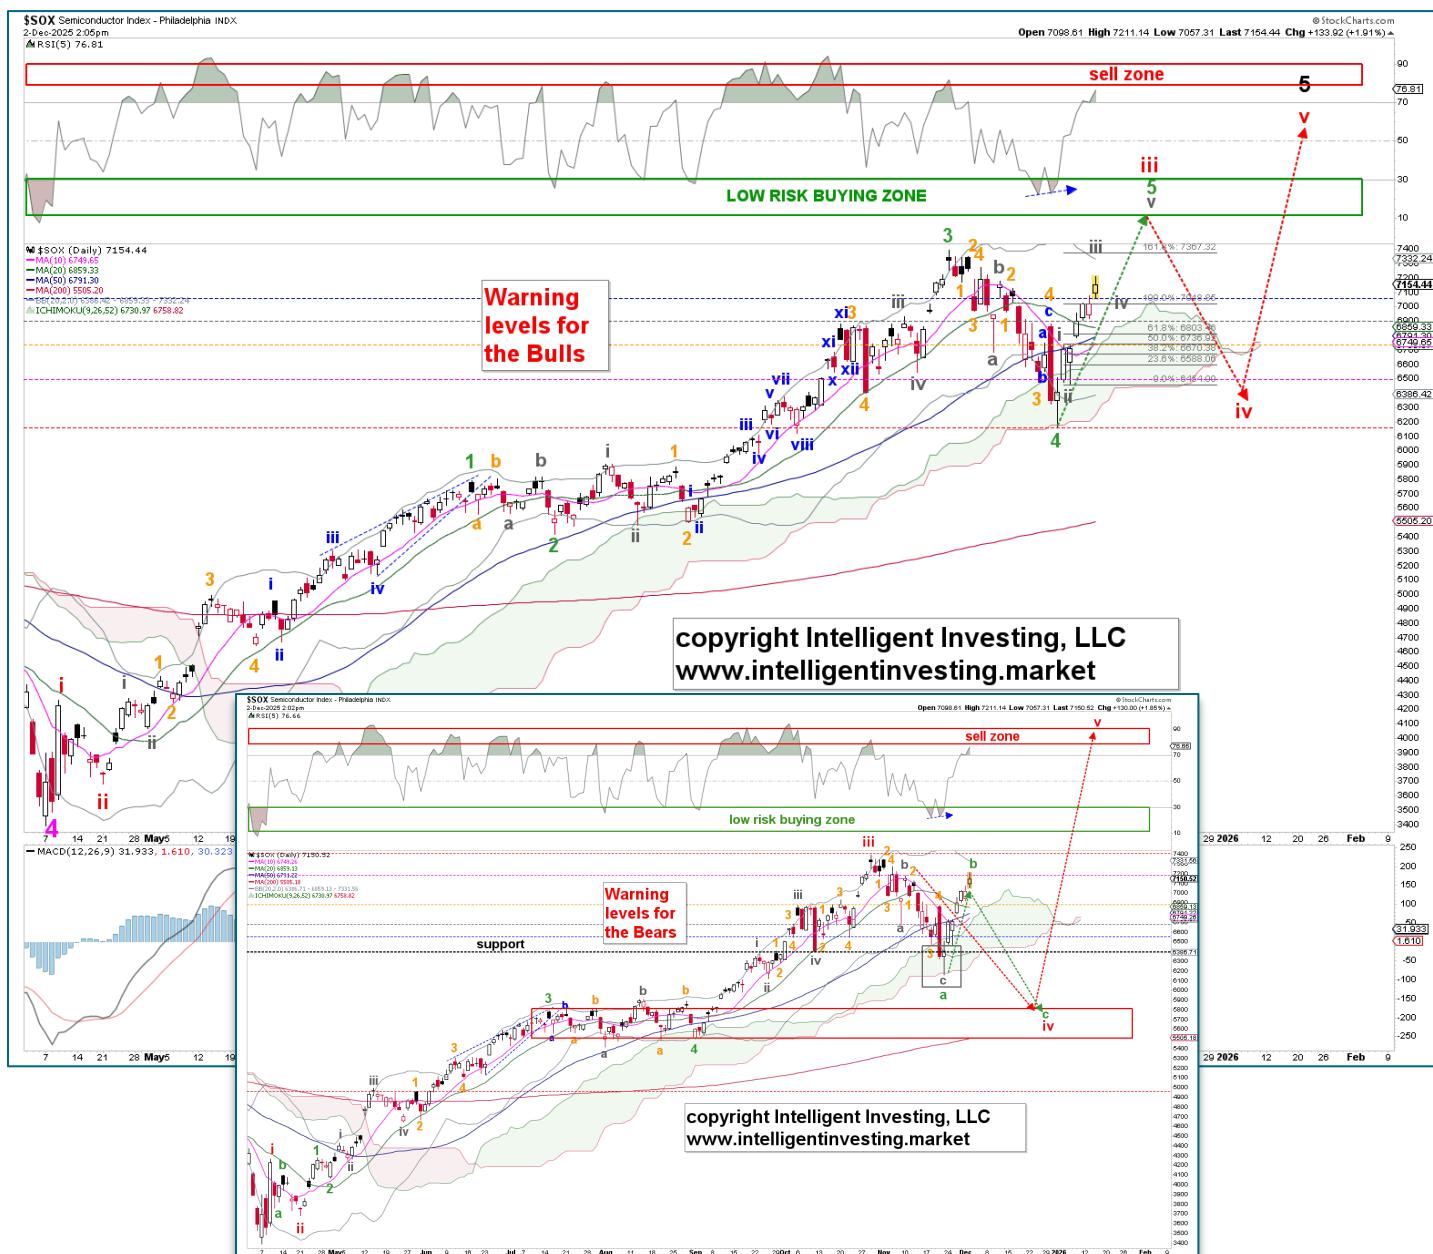

## SEMICONDUCTORS

As the index rose sharply as expected last week, the ongoing price increase further favors the W-5 over the W-b rally. Last week, their chances were 50/50; yesterday, 60/40; and today, 70/30. Therefore, our preferred scenario remains the 5th wave, targeting approximately 7500, ideally following the textbook impulse pattern shown below.

This also shows that swing traders should have gone long last week, regardless of the two options, because both pointed higher. Don't worry about the possible C-wave; that's what the warning levels will handle. Also, the index's RSI5 clearly bottomed in the low-risk buy zone last week. So, we must buy. Trading follows the process and triggers—nothing else. It's completely binary: if/then. *"If the RSI5 is in the low-risk buy zone, we buy. If the RSI5 is in the sell zone, we sell. If price drops below warning level X, we also sell."* That's all there is to it. These EW counts aren't confusing; they simply show the two options, while clearly well-defined trade triggers were always present.

Thus, the warning levels for the Bears remain at: **6551, 6688, 6882, 7178, 7392**. And due to the continued rally, the warning levels for the Bulls are now raised to **7057, 6907, 6730, 6457** and **6160**.

# CRYPTO CURRENCIES

## BITCOIN

When financial markets start to reach their bottom or peak, the common question is: *Will there be one more decline or another rise?* It's rarely straightforward. That's why we often say the risk/reward favors potential gains for the former and risk for the latter. E.g., yesterday we signed off with "Thus, either EW count, with the Bullish resolution to new ATHs preferred, look for higher prices soon. Great risk-reward for those who have patience." It also means staying flexible with buying and selling strategies while adhering to the process, as at this last stage, things can change more quickly than when the trend is steady.

Take the "low risk buy zone," for example; it has performed very well so far. Thus, as our preferred long-term view, this is considered part of a larger 4th wave (and in yesterday's update, we showed the many issues with "THE" top), which may have ended at the recent low, as BTC came close to several important Fib-extension levels. Meanwhile, the indicators are turning back up (blue arrows): bullish. Therefore, a new impulse, as shown, CAN be underway contingent on the following warning levels: **90083**, **88529**, **90381**, **83828**, and **80562**.

The alternative is an ongoing, protracted **W-iv**, ideally to 96870-102360, contingent on BTC holding below 103552, especially. This would make the **W-ii** and **W-**

**iv** more proportionate in time and price. Besides, C-waves most often comprise five waves. The warning levels for the Bears are: **89289**, **93116**, **103552**, **116395**, and **124532**.

# ETHEREUM

The short-term EW count had been adjusted to a gray **W-iii, iv, v** scenario, like we are tracking for BTC, with now the possibility of a more protracted **W-iv**, with **W-c** of **W-iv** underway, which should remain below **3546**. Above it, the odds increase that the red **W-b** is underway. Thus, the warning levels for the bears are set at: **3059, 3546, 4253, 4758, and 4955**.

The other option is that the **W-a** ended, as there are enough waves in place to consider it complete, although the final **W-iv** is very brief (1 day) vs a multi-week **W-ii...** Thus, contingent on the following warning levels for the bulls, we can allow the **W-b** to unfold.

**2963, 2856, 2799, 2719, and 2621.**

Note, both options look for higher prices.

# GOLD, MINERS & OIL

## GOLD

No changes from yesterday. "Since 4<sup>th</sup> waves are often the most complex patterns of all five waves in an impulse, we're not too surprised that the current price action is less compliant as well. Our primary POV remains on an ongoing 4<sup>th</sup> wave, and since 4<sup>th</sup> waves often are flats (3-3-5) or triangles (3-3-3), we're going with the flat. With **W-b** still considered as underway, while a break below last week's low will be a good sign that the green **W-c** is underway."

# GDX & GDXJ

A break above yesterday's high increases the odds for the impulse even more, whereas a break below the gray warning levels increases the odds for the W-b.

**GDX 81.77, 78.55, 76.86, 72.45.**  
**GDXJ 106.28, 101.48, 98.97, 92.66.**

A break above yesterday's high increases the odds for the impulse even more, whereas a break below the gray warning levels increases the odds for the W-b.

## TRADING IS BORING – JUST THE RULES, MA’AM\*

- Short-term results are (more) random than intermediate- to long-term. Focus accordingly.
- An "edge" appears only through repetition.
- Thus, a trader's job is not to win, but to relentlessly repeat the same actions.
- Therefore, a trader doesn't wait for opportunities driven by the urge and desire to trade.
- Your responsibility is to follow the rules, and nothing more.
  - Thus, you act only because
    - *"The opportunity has arrived,"*
    - *"It's the rule,"*
    - *"There is no choice but to act."*
- You don't have the authority to decide *"whether or not to follow that rule."*
- Avoid setting a daily profit target.
  - It is irrelevant to you and beyond your control.
- If you are going to reflect, focus on failing to follow the rules. That will teach you!
- A trading system with a 50-50 win/loss ratio (WLR) and a 2-1 win/loss percentage (%), WLP) is still more effective than one with a 90-10 (WLR) and a 1-5 (WLP).
  - It's not about how many trades you win.
  - It's about cutting losers and allowing winners to run.

Did you make a “good trade” today? Well, kudos to you, but if you only looked at the trade’s profit to decide whether it was good, you did it all wrong. Specifically, your P/L has nothing to do with that assessment. A profit gained by breaking your rules is the worst trade because it creates a false sense of success in your mind. Conversely, a loss that occurs while perfectly following your rules is a valuable learning experience that helps build a long-term edge.

Unless you can accept this, you haven't truly started trading.

Lastly, the 1<sup>st</sup> rule in trading is to always minimize your losses! Profits are secondary... Know the difference.

## \*BACKTESTED TRADING SYSTEM PERFORMANCES

Our new trading systems work best by applying the compounding principle, which involves reinvesting some or all of your profits in the next trade. The more you compound, the better the returns will be. Please review the table below. All the data for each ETF, CRYPTO, and almost every MAG7+ STOCK is also available [here](#).

Please do not trade positions bought without the system's signals using the system's trading signals. Additionally, please refrain from entering a position when the trade is already in progress; wait for a new trading signal.

These systems operate entirely independently of our analyses. Do not try to combine or correlate them. They track prices and their trends based on several parameters that trigger buy, sell, or hold signals through if/then conditions. Sometimes our analysis is correct while the system is wrong, or vice versa. Or both can be right or wrong. Therefore, these systems complement our analyses and represent the ultimate trading experience: simply execute the signal. Refer to the previous page for what trading really is: a mindless, boring process of execution. Nothing more, nothing less.

The code for these trading systems is available for purchase. Please contact us for pricing details. It is written in Pine Script and can be directly integrated into TradingView, Alpaca, or Interactive Brokers (IBKR), allowing it to manage all your trading needs. Any AI, such as GROK or ChatGPT, can quickly modify the code to another language if necessary.
