STOCKMARKETS

Not much happened today. Instead of filling pages with empty content, we're sharing a few key indices to explain our perspectives (SPX, NAS = NDX, SMLL = DOW). Looking into 2026, we're considering seasonality and the Pi Cycle. The former, for mid-term election years, peaks around April 18 (2026), while the latter projects a peak around April 28, 2026. Coincidence? Time will tell, but it's worth watching.

SP500

We can still count the current decline from last week's high as part of the gray **W-iv** and **W-v**, ideally to 6930-7010, which can still happen, barring any unforeseen extensions. The Bulls' warning levels for the short-term remain at **6827**, **6799**, **6738**, **6659**, and **6596**. Note that we now have five warning levels, reducing the odds of continued upside by 20% for each breached level. We won't get too concerned about the uptrend until the orange level is broken.

NASDAQ = NDX

On Friday, we discussed the possibility of subdividing W-5, as detailed further in the NAS below. Essentially, if the November low holds, we can allow this to happen, also considering several factors (the short-term can be counted as five waves up: see Friday's update for the NDX, the NYAD hit a new ATH last week, seasonality is bullish into EOY, seasonality and Pi Cycle (see page 2), etc.). If the indexes remain above their orange warning levels each day, we can remain bullish: **23435**, **23110**, **22587**, **22273**, and **21898**. Note that we now have five warning levels, each reducing the odds of continued upside by 20% when breached. We won't become too worried about the uptrend until the orange level is broken. If they don't hold, we must reconsider whether the larger Third wave has already topped (see Friday's update).

SMALL CAPS = DOW

These two indices have moved in unison more than any of the others, so let's stick with the Bullish outlook we have for the SMLL, as 'our primary view remains that the **W-5** to 1575+/-50 is underway,' was and still is 100% correct. With today's price action, we can now start to count the price action in more detail, suggesting the index is in the orange **W-4** of the gray **W-iii** of the green **W-5**, contingent on holding above the Bulls' warning levels set at **1509**, **1488**, **1456**, **1430**, and **1369**.

Note that we now have five warning levels, reducing the odds of continued upside by 20% for each breached level. We won't get too concerned about the uptrend until the orange level is broken.

CRYPTO CURRENCIES

BITCOIN & BITO

On Friday, we cited BITO to indicate that the final 4th and 5th waves of this decline are likely wrapping up. And the past 2-3 days have added to that scenario. Thus, our preferred POV is that for BTC, the **W-v** of **W-c** of **W-iv** is most likely underway, with an ideal target of \$77-80K before we see at least a rally to \$105,000 +/- 5,000.

Positive divergence is building on all the technical indicators, like what we saw in March-April (see the BITO chart's red boxes). C-waves most often move in five waves, thus this final 5th wave matches that general scenario very well. Why do we say *"at least a rally to \$105,000 +/- 5,000"*? Because, albeit unorthodox, the Bull market may have ended this year. That's our alternative scenario.

Meanwhile, Fidelity released its 2026 outlook; see [here](#). While somewhat vague as usual, it correctly identifies the recent three 4-year cycles. But that doesn't mean they continue (when everyone has recognized the obvious, the market often becomes less obvious... It would be too easy otherwise, wouldn't it?!) Besides, the last paragraph says it best: *"However, on a very long-term time horizon, I do not think you can ever be late to bitcoin if you are thinking of it as a store of value. If the hard supply cap remains in place, every purchase of bitcoin is putting your labor or savings into something that won't lose value due to inflation resulting from government monetary policy."*

ETHEREUM

The price action over the last 4 days is now adding further weight to the **W-iv, v** scenario (see the chart below), which is now even more favored than on Friday, and as such, it's the only one we're going to show until proven otherwise. Thus, as stated last week, "we prefer Option 1: "a more protracted **W-iv**, with **W-c** of **W-iv** underway, which should remain below **3546**. Above it, the odds increase that the red **W-b** is underway. The warning levels for the bears remain at **3059, 3546, 4253, 4758, 4955**."

It certainly looks like it needs a lower low, after a complex 4th wave, to around \$11.75-11.10 for the final 5th wave of this decline.

The first option indicates that the October decline (green **W-1**) may have been a leading diagonal. Thus, we get five waves down and must therefore expect three waves back up to ideally the red **W-b** target zone (\$19 ± 1.5).

The other option is a continued rally well above the October highs, as we noted in earlier updates.

Thus, both options target the same lower price to complete the current decline at around \$ 11.50, before we see a solid rally. Hence, one doesn't need to be confused by both options, as both are looking for higher prices soon. It will then most likely depend on Bitcoin: new ATHs (\$164K+) or only a bounce (4-year cycle ended)? TBD. But the focus is first on \$11.50, followed by at least \$18-20.

GOLD, MINERS & OIL

BRENT (OIL)

Remains in a solid downtrend, with its price below its declining 10d, 20d, 50d, and 200d SMAs, as well as below its Ichimoku Cloud. Did we mention it is still firmly within its downtrend channel? Meanwhile, the 10d < 20d < 50d < 200d. A 100% bearish trend. One only needs to look at these factors to see there are no signs of a bottom, and we can go back to bed. We won't get excited until, ideally, \$45 is hit or the trend changes to Bullish.

GDX

The Bullish EW count, as featured on the GDX chart, continues, and the **W-iii** of **W-5** has topped. **W-iv** to ideally \$82+/-1 is now underway, before **W-v** kicks it to \$92+/-1, all contingent on the ETF staying above its warning levels: **83.94**, **80.54**, **79.07**, **76.86**, and **72.45**.

TRADING IS BORING – JUST THE RULES, MA'AM*

- Short-term results are (more) random than intermediate- to long-term. Focus accordingly.
- An "edge" appears only through repetition.
- Thus, a trader's job is not to win, but to relentlessly repeat the same actions.
- Therefore, a trader doesn't wait for opportunities driven by the urge and desire to trade.
- Your responsibility is to follow the rules, and nothing more.
 - Thus, you act only because
 - *"The opportunity has arrived,"*
 - *"It's the rule,"*
 - *"There is no choice but to act."*
- You don't have the authority to decide *"whether or not to follow that rule."*
- Avoid setting a daily profit target.
 - It is irrelevant to you and beyond your control.
- If you are going to reflect, focus on failing to follow the rules. That will teach you!
- A trading system with a 50-50 win/loss ratio (WLR) and a 2-1 win/loss percentage (% WLP) is still more effective than one with a 90-10 (WLR) and a 1-5 (WLP).
 - It's not about how many trades you win.
 - It's about cutting losers and allowing winners to run.

Did you make a "good trade" today? Well, kudos to you, but if you only looked at the trade's profit to decide whether it was good, you did it all wrong. Specifically, your P/L has nothing to do with that assessment. A profit gained by breaking your rules is the worst trade because it creates a false sense of success in your mind. Conversely, a loss that occurs while perfectly following your rules is a valuable learning experience that helps build a long-term edge.

Unless you can accept this, you haven't truly started trading.

Lastly, the 1st rule in trading is to always minimize your losses! Profits are secondary... Know the difference.

*BACKTESTED TRADING SYSTEM PERFORMANCES

Our new trading systems work best by applying the compounding principle, which involves reinvesting some or all of your profits in the next trade. The more you compound, the better the returns will be. Please review the table below. All the data for each ETF, CRYPTO, and almost every MAG7+ STOCK is also available [here](#).

Please do not trade positions bought without the system's signals using the system's trading signals. Additionally, please refrain from entering a position when the trade is already in progress; wait for a new trading signal.

These systems operate entirely independently of our analyses. Do not try to combine or correlate them. They track prices and their trends based on several parameters that trigger buy, sell, or hold signals through if/then conditions. Sometimes our analysis is correct while the system is wrong, or vice versa. Or both can be right or wrong. Therefore, these systems complement our analyses and represent the ultimate trading experience: simply execute the signal. Refer to the previous page for what trading really is: a mindless, boring process of execution. Nothing more, nothing less.

The code for these trading systems is available for purchase. Please contact us for pricing details. It is written in Pine Script and can be directly integrated into TradingView, Alpaca, or Interactive Brokers (IBKR), allowing it to manage all your trading needs. Any AI, such as GROK or ChatGPT, can quickly modify the code to another language if necessary.
