STOCKMARKETS

SP500 Outlook: Bullish. Invalidation: 6720. Support: 6820. Resistance: 7050. Target: 6980-7000.

As the index has moved higher, we warned that an Ending Diagonal may be forming. While the warning levels for the Bulls remain at **6904, 6878, 6844, 6824, and 6720**, we wanted to show what such a diagonal, barring any extensions, would look like using our trusted line chart. Note that the index has followed the dotted arrows, in place for about 5 months now. Besides, such a path shows that we can't account for every daily scribble, but that we can account for the general path. Focus is always on that.

NDX Outlook: Bullish. Invalidation: 24648. Support: 25350. Resistance: 25830. Target: 26680-28140.

See our article from today: <https://www.investing.com/analysis/nasdaq-100-holds-its-bull-path-as-elliott-waves-target-one-more-upswing-200672865>

SOX Outlook: Bullish. Invalidation: 6680. Support: 7100. Resistance: 8000. Target: 8250+/-250

As the index has moved higher, we warned that an Ending Diagonal may be forming, resulting in an overlapping rally to the lower end of the target zone (~8825), with even a pullback to ~7200 totally being OK. While the warning levels for the Bulls remain at **7521**, **7415**, **7286**, **7082**, and **6680**, we wanted to show what such a diagonal, barring any extensions, could look like.

DOW Outlook: Bullish. **Invalidation:** 45728. **Support:** 48500. **Resistance:** 50030. **Target:** 49250-54000

W-vii may have topped today, but there's no overall change in "the ideal target remains at \$49250-49750, with the possibility of \$ 52-54K." Thus, the Bulls' warning levels remain at **48923, 48449, 47853, 47462, 47049**.

CRYPTO CURRENCIES

BTC Outlook: Bearish. Invalidation: 103552. Support: 87+-1K Resistance: 94500. Target: ~72K

As you know, at this stage, and as in 2015, see below, we can't rule out a lower low near the upper end of long-term support (\$69-73K) this year before Bitcoin really takes off.

How can we resolve that lower low? By playing devil's advocate, as today, a complex flat W-iv may have topped. See on the left.

Yes, we still cannot entirely rule out an intermediate-term bearish resolution before the next Bull kicks in.

If this is the case, with confirmation below 84K, we'll look for 72-75K as the next rally's starting point.

GOLD, MINERS & OIL

GLD Outlook: Bullish. Invalidation: 368.52. Support: 396. Resistance: 415. Target: 434+

Our primary expectation remains that the **W-v** is underway, contingent on GLD holding above the Bulls' warning levels shown on the daily chart at **414.75**, **408.83**, **396.25**, **384.01**, and **368.52**. Note that the trend remains 100% bullish in the short term, as price is above the 10d, 20d, 50d, and 200d SMAs, which are bullishly stacked, and all are above the Ichimoku cloud. But potential negative divergence in the daily RSI5 and MACD is now building, which can help forecast the completion of the **W-v**.

GDXJ Outlook: Bullish. Invalidation: 102. Support: 115.25. Resistance: 122. Target: 126-129

GDXJ should still be in its 9th wave, ideally to 126-129, contingent on holding the critical warning levels (3rd and 4th) at: **118.11, 115.39, 110.04**, and **102.04**.

TRADING IS BORING – JUST THE RULES, MA’AM*

- Short-term results are (more) random than intermediate- to long-term. Focus accordingly.
- An "edge" appears only through repetition.
- Thus, a trader's job is not to win, but to relentlessly repeat the same actions.
- Therefore, a trader doesn't wait for opportunities driven by the urge and desire to trade.
- Your responsibility is to follow the rules, and nothing more.
 - Thus, you act only because
 - *"The opportunity has arrived,"*
 - *"It's the rule,"*
 - *"There is no choice but to act."*
- You don't have the authority to decide *"whether or not to follow that rule."*
- Avoid setting a daily profit target.
 - It is irrelevant to you and beyond your control.
- If you are going to reflect, focus on failing to follow the rules. That will teach you!
- A trading system with a 50-50 win/loss ratio (WLR) and a 2-1 win/loss percentage (%), WLP) is still more effective than one with a 90-10 (WLR) and a 1-5 (WLP).
 - It's not about how many trades you win.
 - It's about cutting losers and allowing winners to run.

Did you make a “good trade” today? Well, kudos to you, but if you only looked at the trade’s profit to decide whether it was good, you did it all wrong. Specifically, your P/L has nothing to do with that assessment. A profit gained by breaking your rules is the worst trade because it creates a false sense of success in your mind. Conversely, a loss that occurs while perfectly following your rules is a valuable learning experience that helps build a long-term edge.

Unless you can accept this, you haven't truly started trading.

Lastly, the 1st rule in trading is to always minimize your losses! Profits are secondary... Know the difference.

**NOT TRADING ADVICE

*BACKTESTED TRADING SYSTEM PERFORMANCES

Our new trading systems work best by applying the compounding principle, which involves reinvesting some or all of your profits in the next trade. The more you compound, the better the returns will be. Please review the table below. All the data for each ETF, CRYPTO, and almost every MAG7+ STOCK is also available [here](#).

Please do not trade positions bought without the system's signals using the system's trading signals. Additionally, please refrain from entering a position when the trade is already in progress; wait for a new trading signal.

These systems operate entirely independently of our analyses. Do not try to combine or correlate them. They track prices and their trends based on several parameters that trigger buy, sell, or hold signals through if/then conditions. Sometimes our analysis is correct while the system is wrong, or vice versa. Or both can be right or wrong. Therefore, these systems complement our analyses and represent the ultimate trading experience: simply execute the signal. Refer to the previous page for what trading really is: a mindless, boring process of execution. Nothing more, nothing less.

The code for these trading systems is available for purchase. Please contact us for pricing details. It is written in Pine Script and can be directly integrated into TradingView, Alpaca, or Interactive Brokers (IBKR), allowing it to manage all your trading needs. Any AI, such as GROK or ChatGPT, can quickly modify the code to another language if necessary.
