SP500 Outlook: Bullish. Invalidation: 6720. Support: 6820. Resistance: 7050. Target: 6980-7000.

Tomorrow's anticipated Supreme Court decision about the legality of Trump's tariffs will likely set the stage for either the ED or the impulse. Regardless of the outcome, our warning levels indicate whether yesterday's high was it for W-3. Meanwhile, the NYAD made a new ATH today... see page 7. That's bullish.

Warning levels for the Bulls

Copyright Intelligent Investing, LLC
www.intelligentinvesting.market

Therefore, the Bulls' warning levels on the 65-minute chart remain at **25512**, **25366**, **25266**, **25086**, and **24648**

SOX Outlook: Bullish. Invalidation: 6680. Support: 7100. Resistance: 8000. Target: 8250+/-250

Today's additional pullback adds weight to the evidence supporting what currently counts as the best **W-4**. See below. Meanwhile the warning levels for the Bulls remain at **7521**, **7415**, **7286**, **7082**, and **6680**, and as stated before "Here, the standard impulse pattern is shown; however, **W-5** can also develop into an overlapping ending diagonal, resulting in an overlapping rally to the lower end of the target zone (~8825), with even a pullback to ~7200 totally being OK. For now, we have no indication that this will occur."

That pullback to about 7200 would then be **W-b** of **W-iii**, and Tuesday's all-time high would then be **W-a** of **W-iii**.

DOW Outlook: Bullish. Invalidation: 45728. Support: 48500. Resistance: 49500. Target: 49250-54000

With today's reversal, it appears most likely that the **W-vii** did not top, as we suggested yesterday (*may have topped today*), but that it is subdividing into another leg higher (**W-c** of **W-vii**). In that case, yesterday's high was **W-a** of **W-vii** and today's low **W-b** of **W-vii**.

Regardless, there's still no overall change in "the ideal target remains at \$49250-49750, with the possibility of \$ 52-54K." Thus, the Bulls' warning levels remain at **48923**, **48449**, **47853**, **47462**, **47049**.

With the index unable to even close below the 1st level yesterday, we still have not even the slightest indication of a top (**W-3**), and with the index above its rising SMAs and Ichimoku Cloud, which are 100% bullishly stacked (10>20>50>200), we must continue to look for higher prices until proven otherwise. Meanwhile, the NYAD made a new ATH. See page 7. That's also bullish

SMALL Outlook: Bullish. Invalidation: 1364. Support: 1490. Resistance: 1540. Target: 1750+/-50

Today's continued upside, in line with our expectations, places more weight on the **W-iii** scenario, and our ideal upside target remains at 1750 ± 50. The Bulls' warning levels are slightly adjusted to **1504**, **1486**, **1465**, **1430**, and **1364** because we reached the new high we wanted to see "before raising them." Thus, so far, so good! 😊 The index and our EWP remain on track.

MARKETBREADTH Outlook: Bullish.

The most critical market breadth indicator, the NYAD, reached a new ATH today. The green arrow indicates the indicator continues to make higher highs: **BULLISH**.

The 2nd most important indicator, the SPX A/D, has not yet made a new ATH but remains in a strong uptrend since April last year, as it is well above the blue support line. Meanwhile, the indicator has been trending higher since its November low (green dotted arrow): **BULLISH**.

Lastly, we note the negative divergence from December 2024 to February 2025. That's the kind of divergence we're looking for to help determine that a larger correction is pending. Clearly, we don't have that now.

CRYPTO CURRENCIES

BTC Outlook: Bullish. Invalidation: 38505. Support: 46000. Resistance: 94000. Target: 164K

As you know, we always try to keep things new, fresh, and interesting. But if an asset's price remains range-bound for an extended period, as BTC (and ETH) have, there's not much new we can say beyond repeating the same old wave counts... Boring...!? Yes.

We always try to think outside our little box and found two interesting data points.

<https://x.com/GertvanLagen/status/2007130501543600254?s=20>

<https://x.com/GertvanLagen/status/2007128613909594253?s=20>

Besides, yesterday we posted the bearish OPTION for BTC. Note that doesn't mean we're bearish. We simply share the potential that's shown in the charts. But since neither the immediate bull nor bear case has been validated, we're still stuck in 2nd gear for the foreseeable future. Meanwhile, we remain long-term (years) bullish on BTC and ETH as both are great stores of value and have tremendous application potential.

Long story short, here are our two options with the warning levels.

Bulls' warning levels at **91499**, **90327**, **88410**, **86704**, and **84424**.

Bears' warning levels at **94804**, **96574**, **98978**, **101302**, and **103552**.

GOLD, MINERS & OIL

SILVER

We don't track Silver in detail, as we do for Gold and the Gold miners, but we have a broader perspective that aligns well with Gold's. SIL should complete a larger 3rd wave, embark on a larger 4th wave to about \$60, assuming a top at around \$ 90 +/- 5, followed by a final 5th wave well into the triple digits to complete the **C3** wave.

OIL (Brent) Outlook: Bullish. Invalidation: 58.7. Support: 60.0 Resistance: 65.6. Target: ~\$67.5

We remain of the opinion that the orange **W-b** to approximately \$67.5 is underway, before the final **W-c** to ideally \$45+/-5 kicks in to complete the **W-v** of **W-c** of **W-ii**, with **W-c** forming an ending diagonal, which is often of the 3-3-3-3-3 kind (abc-abc-abc-abc-abc).

TRADING IS BORING – JUST THE RULES, MA'AM*

- Short-term results are (more) random than intermediate- to long-term. Focus accordingly.
- An "edge" appears only through repetition.
- Thus, a trader's job is not to win, but to relentlessly repeat the same actions.
- Therefore, a trader doesn't wait for opportunities driven by the urge and desire to trade.
- Your responsibility is to follow the rules, and nothing more.
 - Thus, you act only because
 - *"The opportunity has arrived,"*
 - *"It's the rule,"*
 - *"There is no choice but to act."*
- You don't have the authority to decide *"whether or not to follow that rule."*
- Avoid setting a daily profit target.
 - It is irrelevant to you and beyond your control.
- If you are going to reflect, focus on failing to follow the rules. That will teach you!
- A trading system with a 50-50 win/loss ratio (WLR) and a 2-1 win/loss percentage (% WLP) is still more effective than one with a 90-10 (WLR) and a 1-5 (WLP).
 - It's not about how many trades you win.
 - It's about cutting losers and allowing winners to run.

Did you make a “good trade” today? Well, kudos to you, but if you only looked at the trade's profit to decide whether it was good, you did it all wrong. Specifically, your P/L has nothing to do with that assessment. A profit gained by breaking your rules is the worst trade because it creates a false sense of success in your mind. Conversely, a loss that occurs while perfectly following your rules is a valuable learning experience that helps build a long-term edge.

Unless you can accept this, you haven't truly started trading.

Lastly, the 1st rule in trading is to always minimize your losses! Profits are secondary... Know the difference.

**NOT TRADING ADVICE

*BACKTESTED TRADING SYSTEM PERFORMANCES

Our new trading systems work best by applying the compounding principle, which involves reinvesting some or all of your profits in the next trade. The more you compound, the better the returns will be. Please review the table below. All the data for each ETF, CRYPTO, and almost every MAG7+ STOCK is also available [here](#).

Please do not trade positions bought without the system's signals using the system's trading signals. Additionally, please refrain from entering a position when the trade is already in progress; wait for a new trading signal.

These systems operate entirely independently of our analyses. Do not try to combine or correlate them. They track prices and their trends based on several parameters that trigger buy, sell, or hold signals through if/then conditions. Sometimes our analysis is correct while the system is wrong, or vice versa. Or both can be right or wrong. Therefore, these systems complement our analyses and represent the ultimate trading experience: simply execute the signal. Refer to the previous page for what trading really is: a mindless, boring process of execution. Nothing more, nothing less.

The code for these trading systems is available for purchase. Please contact us for pricing details. It is written in Pine Script and can be directly integrated into TradingView, Alpaca, or Interactive Brokers (IBKR), allowing it to manage all your trading needs. Any AI, such as GROK or ChatGPT, can quickly modify the code to another language if necessary.
