# STOCKMARKETS

## SP500 Outlook: Bullish. Invalidation: 6720. Support: 6915. Resistance: 7050. Target: 7345-7490.

Although today's lower prices can be interpreted as bullish (see the NDX count on the next page), we must remain vigilant and aware that the POTENTIAL ending diagonal we've previously highlighted remains active. See below. Thus, the Bulls' warning levels remain at **6934**, **6917**, **6899**, **6878**, and **6824**.

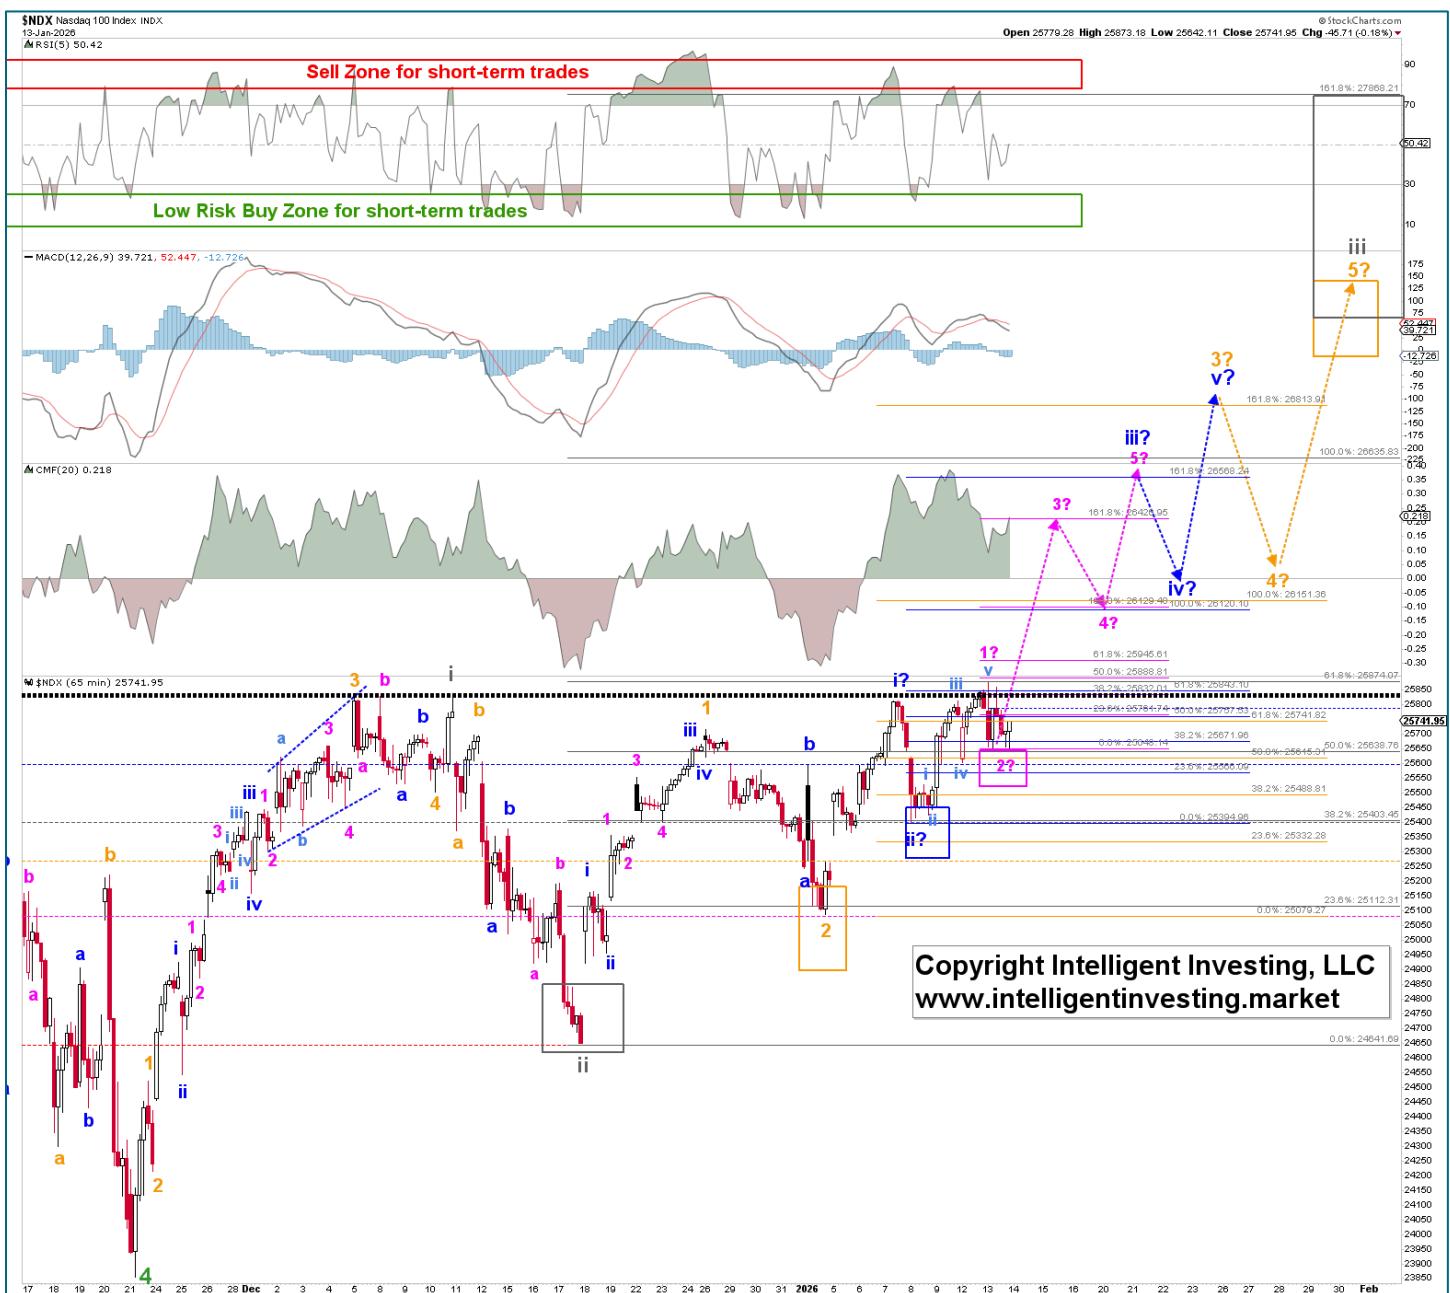

W-iv could, in that case, be underway at ~\$6900 before W-v kicks in at ~\$7120.

## NDX Outlook: Bullish. Invalidation: 24648. Support: 25350. Resistance: 25830. Target: 26680-28140.

Do or die time for the bulls. Namely, \$25830-50 is clearly stiff resistance, and it needs to be taken out on a daily closing basis. Meanwhile, the index continues to count best as five waves up and three waves down, with the most recent small rally also comprising five waves (i, ii, iii, iv, v). This would mean the index is about to commence in its 3<sup>rd</sup> of a 3<sup>rd</sup> of a 3<sup>rd</sup> wave (iii of 3 of iii) contingent on holding above its warning levels, which are set at 25603, 25400, 25266, 25086, and 24647, but if it cannot muster this impulse, than an ED, as shown for the SPX is the next best thing we must expect.

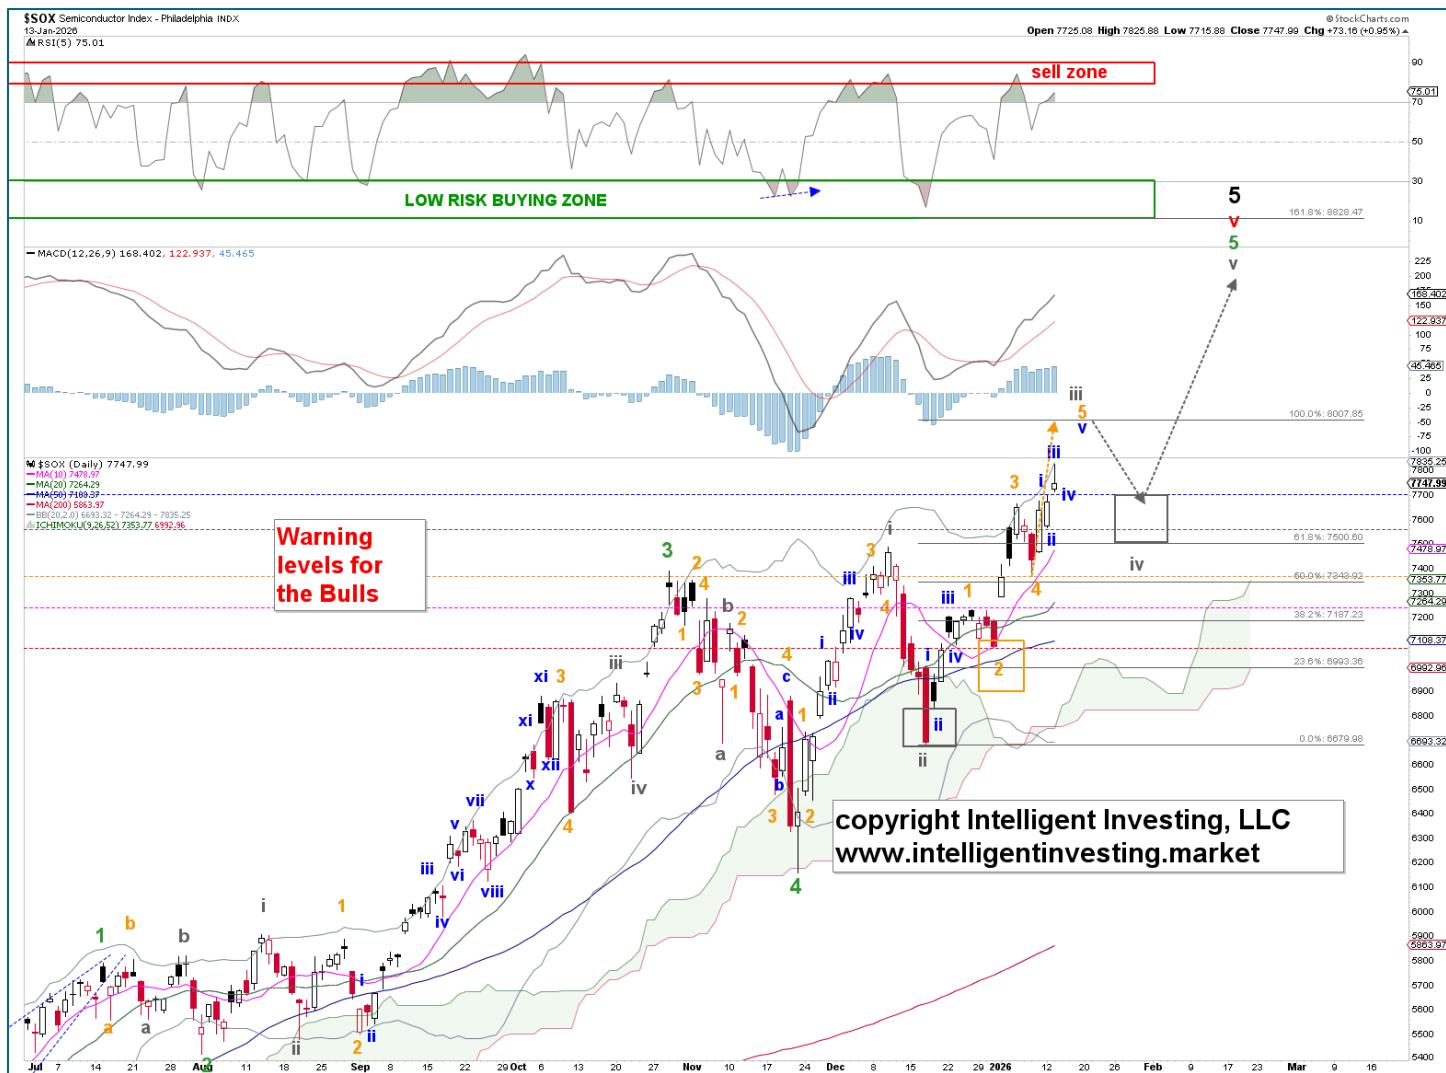

Note how the 200% extensions for the W-5, v, and 5 (numbers not shown, but arrows are) all align with the one-degree higher W-iii, 3, and iii ideal extensions (161.8, 161.8, 123.6%; respectively). Thus, the (amazing) setup is there. All we need is a catalyst. Tomorrow's Supreme Court decision on the legality of the tariffs, which, btw, clearly have not increased inflation (only money printing does....)

## SOX Outlook: Bullish. Invalidation: 6680. Support: 7100. Resistance: 8000. Target: 8250+/-250

As stated yesterday, “**W-5** of **W-iii** should now be underway, ideally to the 100% extension at \$8000, which remains our preferred thesis contingent on the index holding above its critical warning levels\*,....” We can now narrow it down to a **W-i** of **W-5** high on Friday, a **W-ii** low at yesterday’s low, and a **W-iii** high at today’s high, with a **W-iv** possibly already completed too. Thus, **W-v** of **W-5** of **W-iii** should be about to commence, contingent on these warning levels!

\*These levels have been raised to **7715**, **7567**, **7372**, **7233**, and **7082**

**DOW** Outlook: Bullish. **Invalidation:** 45728. **Support:** 48500. **Resistance:** 49500. **Target:** 49250-54000

Unless it's subdividing further, which is unfortunately always impossible to foresee when dealing with an ending diagonal as an ABC advance can become an ABabc, etc, **W-vii** may have topped out, and **W-viii** can ideally commence at \$ 48650 +/- 50. The warning levels for the Bulls remain at **49197, 48792, 48449, 47853, 47462**. Regardless, we remain bullish, as there are still not nine waves up from the green W-4 low, and even EDs require that.

## SMALL Outlook: Bullish. Invalidation: 1364. Support: 1490. Resistance: 1540. Target: 1750+/-50

Our ideal upside target remains at  $1750 \pm 50$ . The Bulls' warning levels remain at **1531, 1510, 1496, 1483**, and **1465**. There are not five larger waves up from the green **W-4** low, so the upside is most likely incomplete.

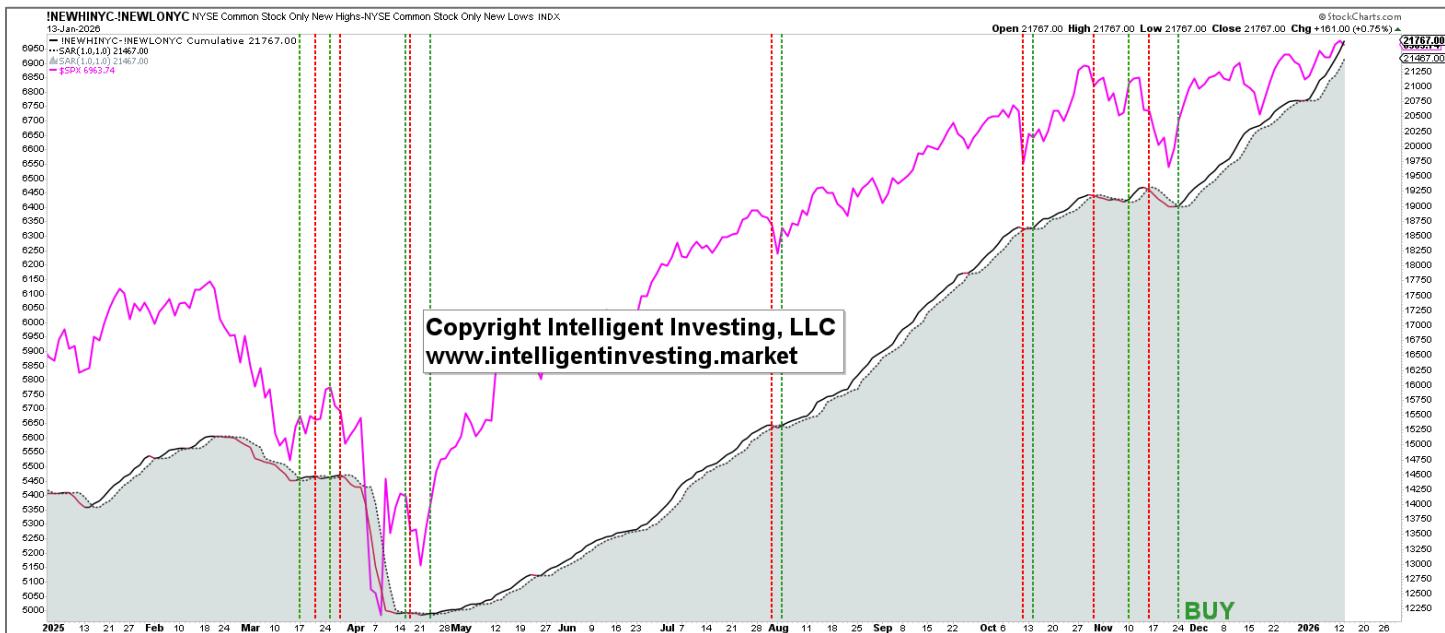

## MARKETBREADTH Outlook: Bullish.

The most critical market breadth indicator, the NYAD, reached a new ATH today. The green arrow indicates the indicator continues to make higher highs: **BULLISH**.

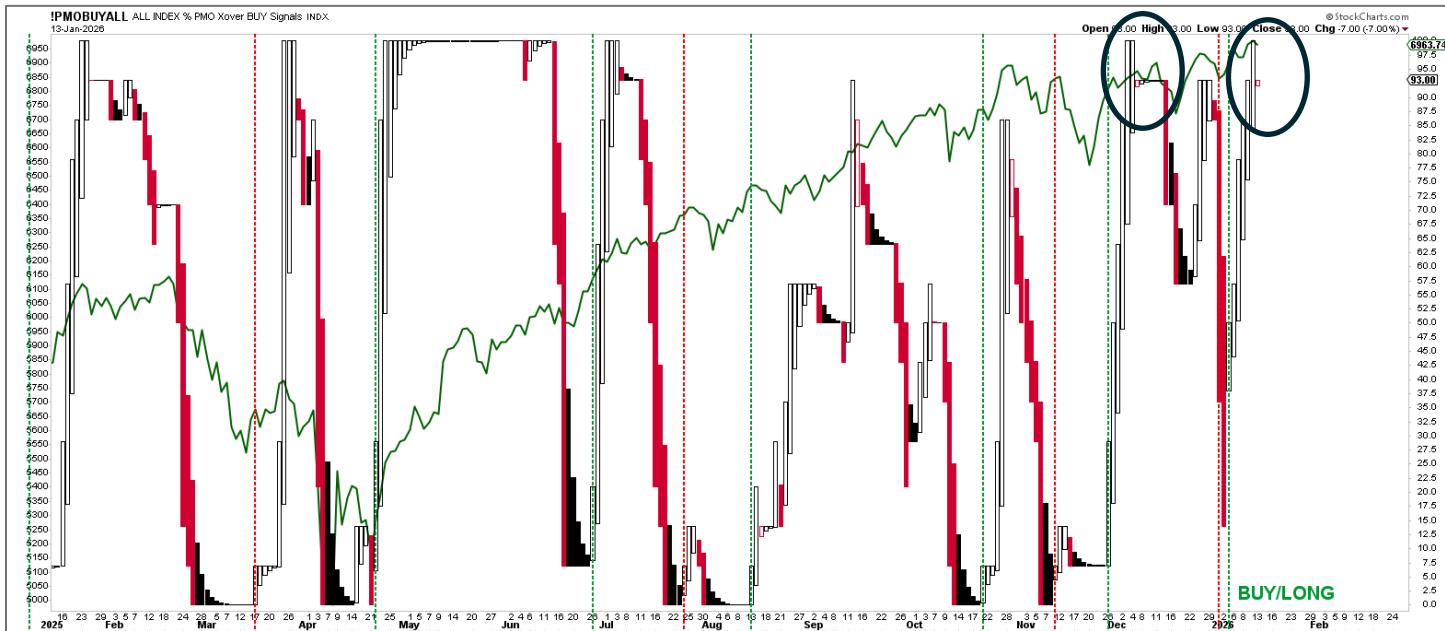

Our intermediate-term trend indicator remains positive and points higher: **BULLISH**.

The short-term buy/sell indicator fell to 93 today, like early December, but did not trigger a sell signal.

**NEUTRAL.**

The S&P500s Summation Index remains on a buy/long and positive since its November 26, 2025 signal:

**BULLISH.**

## CRYPTO CURRENCIES

### BTC Outlook: Bullish. Invalidation: 38505. Support: 46000. Resistance: 94000. Target: 164K

Simple is best, as Einstein used to say. Here's our simplest chart, showing that a potential bullish ascending triangle is forming. It aligns with the EW count we shared yesterday, when we found, *"It's clear BTC needs to break above the potential W-1/W-i level (~\$94,700) while holding above at least the potential W-ii levels (\$84,244) for this setup to kick in."* The potential W-iii targets ideally \$107,111 (See yesterday's chart) and the possible W-v targets ideally \$109-112K. Thus, the triangle breakout target of ~\$110K aligns well.

## BNB Outlook: Bullish. Invalidation: 515. Support: 825. Resistance: 1050-1150. Target: 1775+

Binance held the (black) trendline connecting its prior highs, a classic bullish signal. Note that we have not changed the red arrows/path in place since early 2026, and BNB has held the 2<sup>nd</sup> warning level for the Bulls elegantly. Meanwhile, BNB is above its rising 10m, 20m, and 50m SMA: a 100% Bullish chart. As such, we still view W-v to much higher prices as underway contingent on staying above the Bulls' warning levels at **939, 810, 693, and 515**.

Note also that the **W-i** high was 810, while last month's low was 813. Thus, no overlap between the 1<sup>st</sup> and the 4<sup>th</sup> wave so far!

# GOLD, MINERS & OIL

**OIL Outlook: Bullish. Invalidation: 58.72. Support: 60.60. Resistance: 65.80. Target: 70.00+**

Our primary expectation remains that **W-b** of **W-v** is underway, ideally targeting \$ 69 +/- 1.

## GLD Outlook: Bullish. Invalidation: 368.52. Support: 359.25. Resistance: 433. Target: 440+/-5

Our primary expectation remains that GLD is in its final **W-v**, which is subdividing into five smaller (orange) waves. And of those, the last wave (**W-5**) is also subdividing into five (blue) waves, with a **W-iv** now underway, to be followed by a final **W-v**, to ideally \$440+/-5, contingent on holding above the raised critical warning levels (3rd and 4th) at: **421.52**, **415.29**, **406.40**, **395.33**, and **368.52**. These warning levels mean that with each subsequent close below, the odds increase by 20% that the current uptrend has ended.

## TRADING IS BORING – JUST THE RULES, MA’AM\*

- Short-term results are (more) random than intermediate- to long-term. Focus accordingly.
- An "edge" appears only through repetition.
- Thus, a trader's job is not to win, but to relentlessly repeat the same actions.
- Therefore, a trader doesn't wait for opportunities driven by the urge and desire to trade.
- Your responsibility is to follow the rules, and nothing more.
  - Thus, you act only because
    - *"The opportunity has arrived,"*
    - *"It's the rule,"*
    - *"There is no choice but to act."*
- You don't have the authority to decide *"whether or not to follow that rule."*
- Avoid setting a daily profit target.
  - It is irrelevant to you and beyond your control.
- If you are going to reflect, focus on failing to follow the rules. That will teach you!
- A trading system with a 50-50 win/loss ratio (WLR) and a 2-1 win/loss percentage (%), WLP) is still more effective than one with a 90-10 (WLR) and a 1-5 (WLP).
  - It's not about how many trades you win.
  - It's about cutting losers and allowing winners to run.

Did you make a “good trade” today? Well, kudos to you, but if you only looked at the trade’s profit to decide whether it was good, you did it all wrong. Specifically, your P/L has nothing to do with that assessment. A profit gained by breaking your rules is the worst trade because it creates a false sense of success in your mind. Conversely, a loss that occurs while perfectly following your rules is a valuable learning experience that helps build a long-term edge.

Unless you can accept this, you haven't truly started trading.

Lastly, the 1<sup>st</sup> rule in trading is to always minimize your losses! Profits are secondary... Know the difference.

## \*BACKTESTED TRADING SYSTEM PERFORMANCES

Our new trading systems work best by applying the compounding principle, which involves reinvesting some or all of your profits in the next trade. The more you compound, the better the returns will be. Please review the table below. All the data for each ETF, CRYPTO, and almost every MAG7+ STOCK is also available [here](#).

Please do not trade positions bought without the system's signals using the system's trading signals. Additionally, please refrain from entering a position when the trade is already in progress; wait for a new trading signal.

These systems operate entirely independently of our analyses. Do not try to combine or correlate them. They track prices and their trends based on several parameters that trigger buy, sell, or hold signals through if/then conditions. Sometimes our analysis is correct while the system is wrong, or vice versa. Or both can be right or wrong. Therefore, these systems complement our analyses and represent the ultimate trading experience: simply execute the signal. Refer to the previous page for what trading really is: a mindless, boring process of execution. Nothing more, nothing less.

The code for these trading systems is available for purchase. Please contact us for pricing details. It is written in Pine Script and can be directly integrated into TradingView, Alpaca, or Interactive Brokers (IBKR), allowing it to manage all your trading needs. Any AI, such as GROK or ChatGPT, can quickly modify the code to another language if necessary.
