# STOCKMARKETS

**SP500 Outlook: Bullish. Invalidation: 6720. Support: 6900. Resistance: 7000. Target: 7120-7335.**

The “dragging it out until April” ending diagonal remains our preferred EWP count until proven otherwise, and the warning levels for the Bulls for this EW count are CHANGED TO **6921, 6893, 6865, 6789, and 6720.**

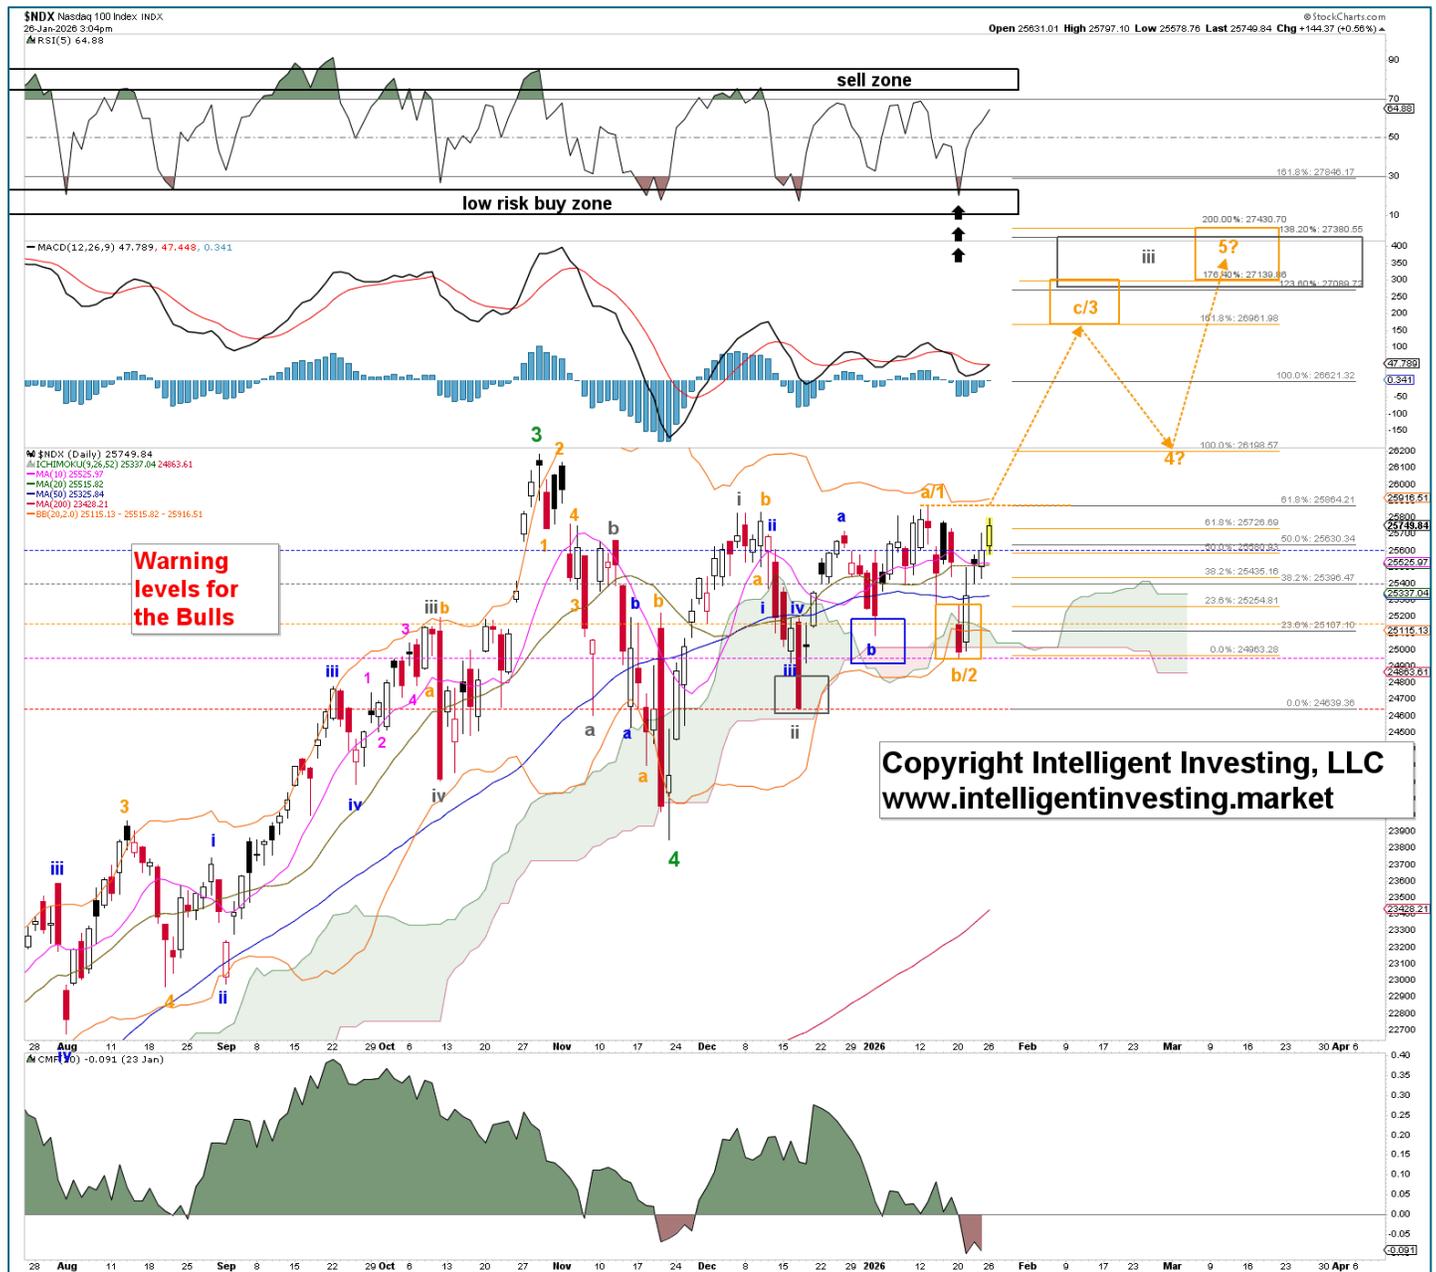

This means that last week’s low was **W-b** and **W-c** of **W-iii**, per the blue **W-a-b** pattern, should now be underway, contingent on the index holding above that low. We have zoomed in on the chart to show the potential path/pattern the index should take, assuming it will follow a reasonable standard ED... TBD.

**NDX Outlook: Bullish. Invalidation: 24648. Support: 25155. Resistance: 25830. Target: 27890-28150.**

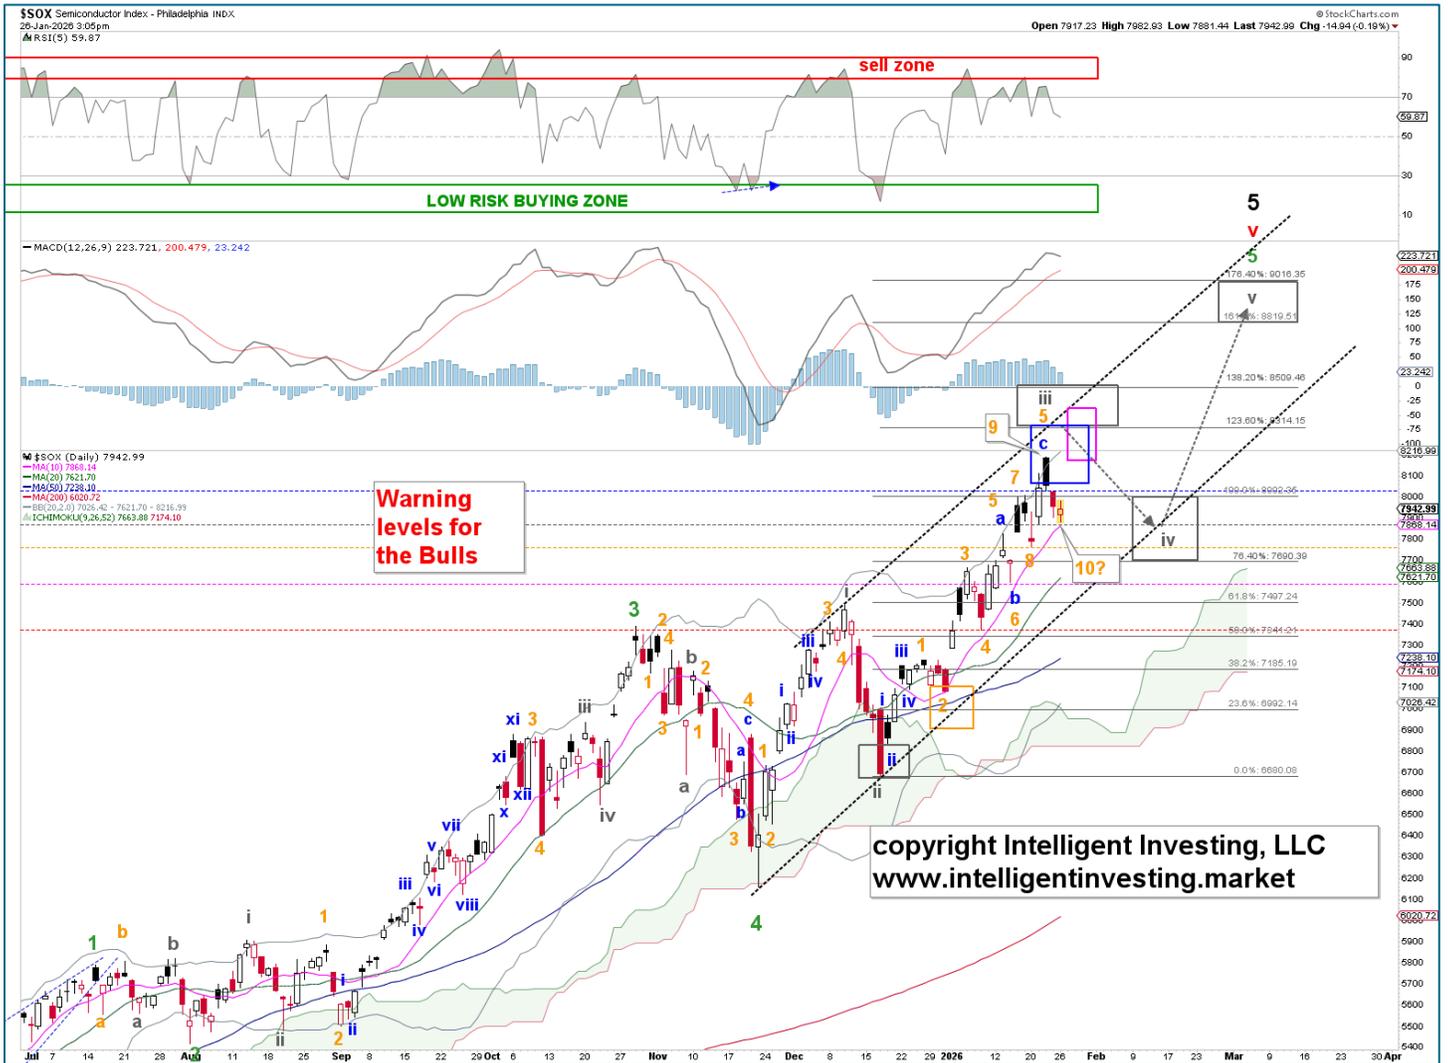

The “*dragging it out until April*” ending diagonal remains our preferred EWP count until proven otherwise, and the warning levels for the Bulls for this EW count are CHANGED TO **25501**, **25399**, **25155**, **24954**, and **24647**.

This means that last week's low was **W-b/2** and **W-c/3** of **W-iii**, should now be underway, contingent on the index holding above that low. We don't yet know whether the **W-iii** will be five or three waves. It can be either in an ED, though three waves are more common. For now, all we need is that long-awaited break above 25830 to confirm the W-3/c. Big tech earnings are due later this week (AAPL 01/29; MSFT, META, TSLA ON 01/28), which will move the market.

# SOX Outlook: Bullish. Invalidation: 7372. Support: 7700. Resistance: 8450+/-50. Target: 8900

With today's continued pullback, we can count 9 (orange) waves up, which could mean the **W-iii** topped. But as easy as five waves can become nine, so can nine become thirteen... Hence the "10?" label. Thus, while the bears made a good start today by pushing the index price below its 1<sup>st</sup> warning level (**8032, 7869, 7767, 7598, and 7372**) it's still holding the 2<sup>nd</sup>. We need to see a close below the 3<sup>rd</sup> level to be more certain the **W-iv** is underway. For all intents and purposes, we assume so, contingent on the index holding last week's high below. If it breaks above it without closing below the 2<sup>nd</sup> warning level, then we'll see a 13-wave **W-iii**. Overall, there's still not five gray waves up from the November low, so we remain bullish even if we see a pullback for the **W-iv**.

**SMALL Outlook: Bullish. Invalidation: 1464. Support: 1540. Resistance: 1600. Target: 1750+/-50**

No changes from last week. "Today, the **W-8** was confirmed, and we still ideally need a **W-9** to complete the **W-iii**. Thus, we still have 0 signs that is the case, ... so ... the **W-iii** can always extend, subdivide, etc. And remember, after **iii** comes **iv** and still a **v**. The Bulls' warning levels remain at **1578, 1552, 1530, 1504, and 1465.**"

# CRYPTO CURRENCIES

**BTC Outlook: Bearish. Invalidation: 97943. Support: 88400. Resistance: 95400. Target: 75-80K**

No changes from last week. "A last fifth wave to \$70-76K remains our preferred POV, before we see the next (massive?!) leg higher. That target is around the orange trend line and the \$75-80K support zone. It also shows that a break below \$75K is more bearish, potentially allowing BTC to reach around \$55K. For now, however, the stars seem to align for \$75-80K before the next leg higher can start, contingent on the bears holding price below the critical warning levels: **88329, 91140, 93703, 95374, and 97943.**" And for as long as gold keeps rallying, cryptos are draining. However, if you've followed our work on GOLD (and why not, as it's right at your fingertips), you will see that it is nearing the end of its rally. It all aligns!

# ETH Outlook: Bearish. Invalidation: 2615. Support: ~3000. Resistance: ~3400. Target: 3800+

No changes from last week as Ether's price remains below all its moving averages and Ichimoku cloud. A 100% downtrend. The silver lining: ALL important bottoms always form under such conditions! But we don't have any signs yet of a low in place. Thus, "a last fifth wave to \$2200-2400 remains our preferred POV, before we see the next (massive?!) leg higher."

The warning levels for the Bears are changed to: **2940, 3035, 3164, 3295, and 3403.**

And for as long as gold keeps rallying, cryptos are draining. However, if you've followed our work on GOLD (and why not, as it's right at your fingertips), you will see that it is nearing the end of its rally. It all aligns

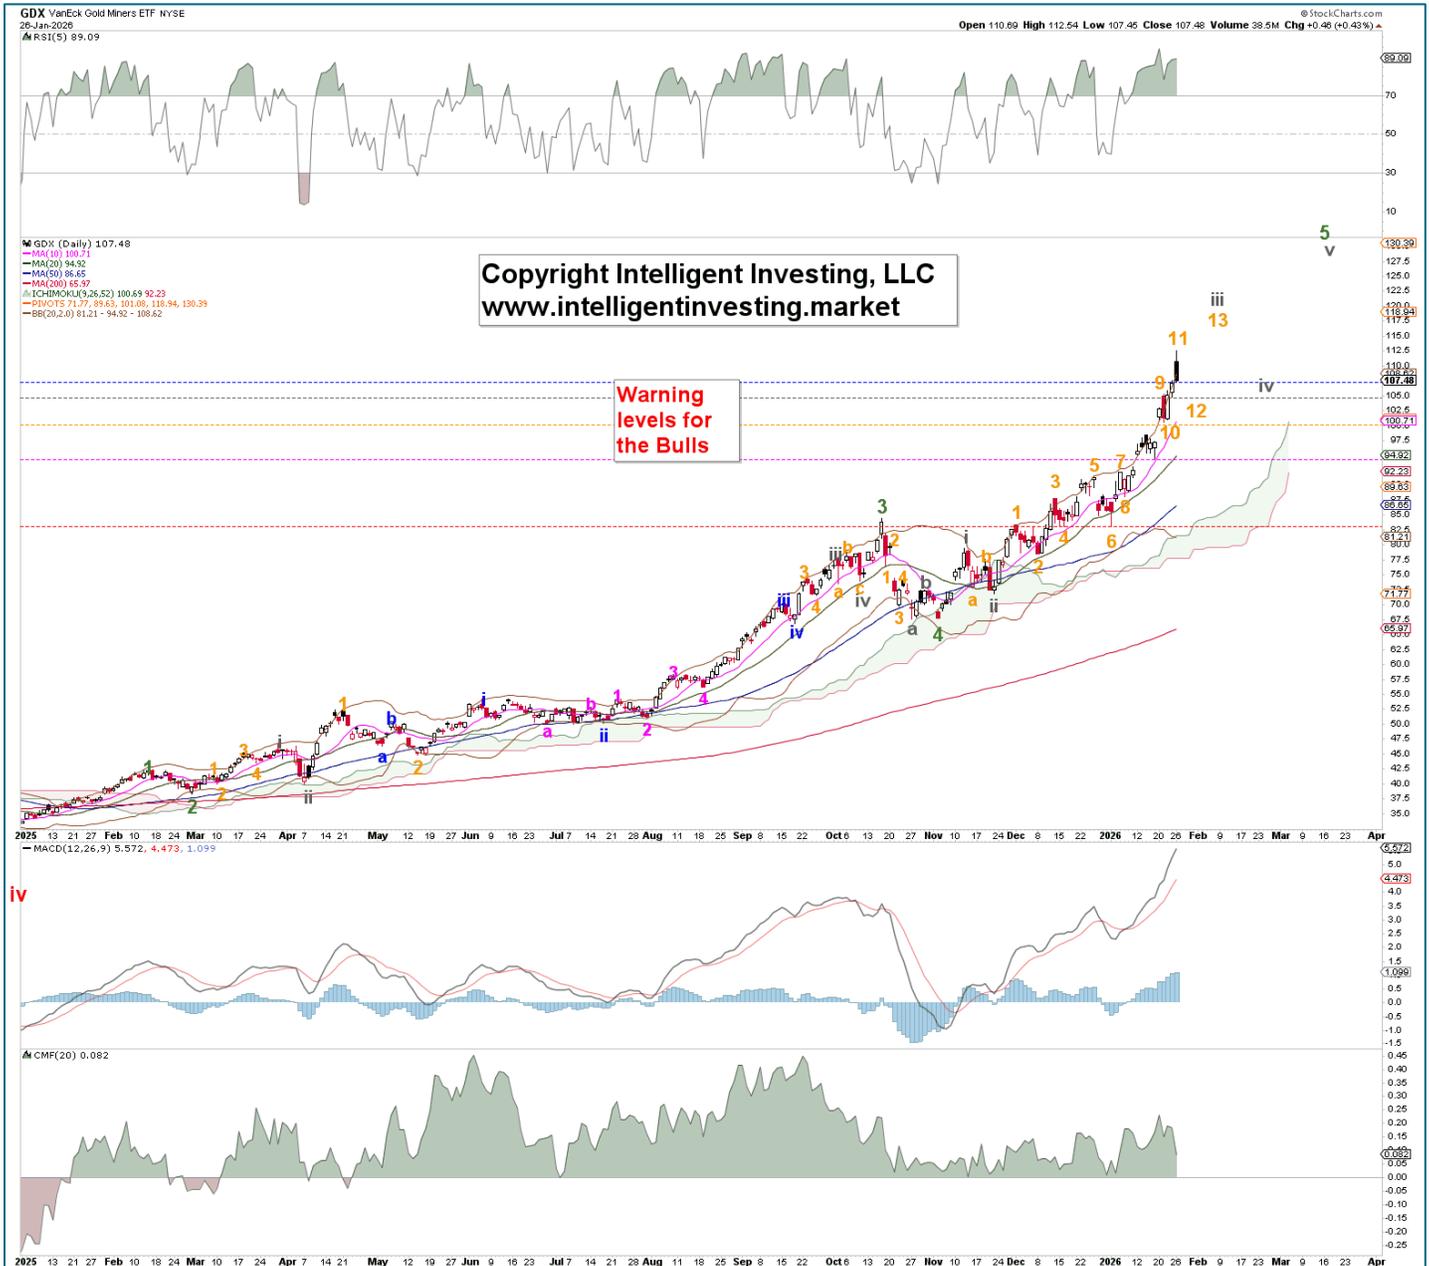

# GOLD, MINERS & OIL

**GDJ Outlook: Bullish. Invalidation: 83. Support: 100. Resistance: 118. Target: 120-130**

No changes other than that the subdividing **W-iii** of **W-5**, is going parabolic... Just WOW! See below. So, all we have to do is raise our warning levels: **105, 104, 100, 94, 83**. Thus, still 0 signs of a top, and it counts best as if the W-iii needs another 12, 13 wave before we can consider it complete. And after 3 come 4 and 5, thus there's still upside left.

And for as long as gold (and the miners keep rallying), cryptos are draining. However, if you've followed our work on BTC/ETH (and why not, as it's right at your fingertips), you will see that both are nearing the end of their correction, while GOLD/SILVER are nearing the end of their massively extended rallies. It all aligns!

# GOLD Outlook: Bullish. Invalidation: 4536 Support: 4650. Resistance: 5330. Target: ~5600

No changes other than that the super-subdivision of the super-extended **W-5**, etc., continues in classic GOLD fashion; see below. We can raise our warning levels to: **4966, 4900, 4772, 4630, 4536**. Thus, still 0 signs of a top, but watch these levels carefully as parabolic moves tend to end in spectacular fashion!

And for as long as gold keeps rallying, cryptos are draining. However, if you've followed our work on BTC/ETH (and why not, as it's right at your fingertips), you will see that both are nearing the end of their correction, while GOLD/SILVER are nearing the end of their massively extended rallies. It all aligns!

## TRADING IS BORING – JUST THE RULES, MA'AM\*

- Short-term results are (more) random than intermediate- to long-term. Focus accordingly.
- An "edge" appears only through repetition.
- Thus, a trader's job is not to win, but to relentlessly repeat the same actions.
- Therefore, a trader doesn't wait for opportunities driven by the urge and desire to trade.
- Your responsibility is to follow the rules, and nothing more.
  - Thus, you act only because
    - *"The opportunity has arrived,"*
    - *"It's the rule,"*
    - *"There is no choice but to act."*
- You don't have the authority to decide *"whether or not to follow that rule."*
- Avoid setting a daily profit target.
  - It is irrelevant to you and beyond your control.
- If you are going to reflect, focus on failing to follow the rules. That will teach you!
- A trading system with a 50-50 win/loss ratio (WLR) and a 2-1 win/loss percentage (% WLP) is still more effective than one with a 90-10 (WLR) and a 1-5 (WLP).
  - It's not about how many trades you win.
  - It's about cutting losers and allowing winners to run.

Did you make a "good trade" today? Well, kudos to you, but if you only looked at the trade's profit to decide whether it was good, you did it all wrong. Specifically, your P/L is unrelated to that assessment. A profit gained by breaking your rules is the worst trade because it creates a false sense of success in your mind. Conversely, a loss that occurs while perfectly following your rules is a valuable learning experience that helps build a long-term edge.

Unless you can accept this, you haven't truly started trading.

Lastly, the 1<sup>st</sup> rule in trading is to always minimize your losses! Profits are secondary... Know the difference.

## \*BACKTESTED TRADING SYSTEM PERFORMANCES

Our new trading systems work best by applying the compounding principle, which involves reinvesting some or all of your profits in the next trade. The more you compound, the better the returns will be. Please review the tables below.

Do not trade positions bought without the system's signals using the system's trading signals. Additionally, please refrain from entering a position when the trade is already in progress; wait for a new trading signal.

These systems operate entirely independently of our analyses. Do not try to combine or correlate them. They track prices and trends based on several parameters, triggering buy, sell, or hold signals via if/then conditions. Sometimes our analysis is correct while the system is wrong, or vice versa. Or both can be right or wrong. Therefore, these systems complement our analyses and represent the ultimate trading experience: simply execute the signal. Refer to the previous page for what trading really is: a mindless, boring process of execution. Nothing more, nothing less.

The code for these trading systems is available for purchase. Please contact us for pricing details. It is written in Pine Script and can be directly integrated into TradingView, Alpaca, or Interactive Brokers (IBKR), allowing it to manage all your trading needs. Any AI, such as GROK or ChatGPT, can quickly translate code into another language if necessary.
