STOCKMARKET

As our BIMBO alert from yesterday morning remains active, please consider that

- The more focused on the short term, the more frustrating things can become due to the stock market's inherent variability, especially during (4th wave) corrections. Namely, on any given day, the S&P500 only has a 53.7% chance of being up the next day. That's close to a coin toss (50%).
- The more focused on the long term, the more relaxed things become, as that 53.7% chance leads to SPX's average annual gain of 9-10%.
- We are not saying not to focus on the short-term, but to set realistic expectations regarding market conditions, performance, analysts' variability, etc., to be mentally prepared for the time frame of choice, especially during complex corrections. All to create more peace of mind, improve emotional stability, and thereby improve the quality of returns.

With that in mind, on Friday, we concluded "4th waves, especially, as we have pointed out this week, are complex and confusing. In EW jargon, they consist of **a-b-c** moves. And these types of moves can always add another set of **a-b-c**. So, when an **a-b-c** in either way, up or down, completes, it can easily subdivide into another **a-b-abc**. Since we know the **W-4** will comprise three larger waves: **a-b-c**, we're still feeling out the end of the **W-a**. If seasonality, history, etc., hold up, then it should be complete soon, and a counter-trend **W-b** rally is to be expected. Also, this one will subdivide into three waves. Meanwhile, the current **W-a** still also comprises three waves.

We are not afraid to admit that predicting yesterday's low was difficult each day and often frustrating, due to the stock market's overlapping downward pattern as the decline from the 7002 ATH developed into a triple zigzag (!): the green **a-b-c** pattern changed into an **abc-abc-abc** pattern, which was subdivided even further into a **abc-abc-12345-abc-abc-12345-abc-abc-12345**. Complex enough for you?! 😊 Hence, the three bulleted items...

Such a complex correction can obviously not be predicted in advance, as once the initial **abc** pattern finishes, the correction can already be considered complete. Additionally, the index remained within a range, staying above 6780 until last Monday, which provided no clear indication of whether it would rally more quickly to ideally 7120+ or correct further first. Not until March 3, last Tuesday, when the SP500 fell to 6710, did we know with greater confidence that the **W-3** top was in, as it had remained an alternative prior to that. That's only five (!) trading days ago...

Thus, while the **W-a** of **W-4** has likely ended, although a quadruple zigzag cannot be excluded, we will most likely continue with an **abc** environment as

the **W-b** of **W-4** will also subdivide into an **a-b-c**. Thus, frustration and higher-than-usual uncertainty will continue to be the name of the game, e.g., like today: *will it be five (orange) waves up or only three?* TBD!

Again, this is not to wash our hands in innocence, but to draw on years of experience, knowledge, and expertise to tell you what to expect. The easy part in the markets is over; e.g., the SPX is back at 6780...

DOW Outlook: Intermediate term (weeks to months) BEARISH. Short term (days to weeks) BULLISH

On Friday we concluded “the index closed below the last warning level for the Bulls, indicating the **W-3** topped. So now we can focus on completing **W-a** and the counter-trend rally **W-b**. See the second chart.

The question is whether **W-a** completed with a **c=1.618x a** relationship or if it will become five (green) waves. TBD. After five, it’s a bounce, after three as well. So, a bounce must be expected at any time.

Meanwhile, please note that the daily RSI5 (our bottom-following indicator) is in the highly reliable low-risk buy zone, and today’s price traded entirely outside the lower Bollinger band. This means that at least the **W-4?** can be expected, if not a larger **W-b**.”

So far, so good. Despite yesterday’s intra-day drop but higher close (and

hence our BIMBO warning 1.5 hrs. after market open!), the index is still above Friday’s levels.

However, we cannot yet exclude the **W-4, 5** scenario; thus, both aforementioned options remain on the table. Regardless, we must expect the **W-b**, even after five waves lower. A move above the orange warning level, without going below yesterday’s low, will greatly enhance the odds the **W-b** is underway, with full confirmation above the 4th level: **47634, 48354, 48731, 49815, and 50512**

SMALL Outlook: Intermediate term (weeks to months) BEARISH. Short term (days to weeks) BULLISH

On Friday we concluded that "All of this adds weight to the evidence that the **W-iii** top is in. However, the daily RSI5 has entered the low-risk buy zone. The ideal downside target lies around 1500 +/- 10, from which we should anticipate a bounce. Thus, the warning levels for the bears are set at: **1537, 1555, 1587, 1613, 1627.**" Today's close is back to Friday's, so we keep things exactly as is. The decline from the **W-iii** high still looks corrective at this stage. Above 1587 will greatly help determine the **W-b** is underway.

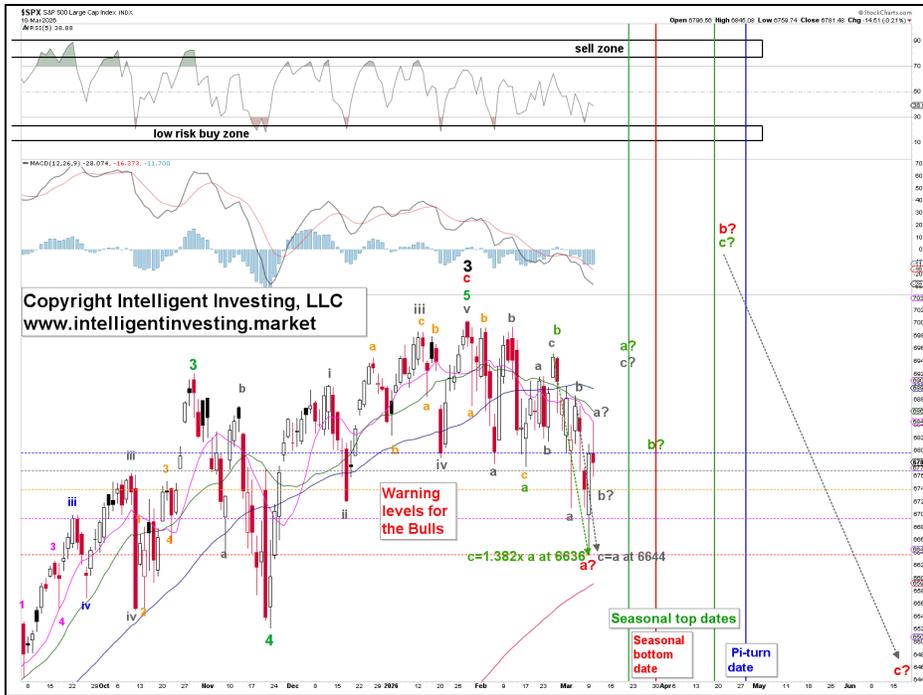

SOX Outlook: Intermediate term (weeks to months) BEARISH. Short term (days to weeks) BULLISH.

On Friday we concluded that “the remainder of the week has added further weight to the evidence that the **W-3** top is, and the warning levels for the bears can now be lowered to **7660, 7908, 8114, 8314, and 8498**. Meanwhile, the daily **RSI5** has entered the “low risk buy zone.” Also, the decline is starting to look like an impulse, with an ideal target around **7300 +/- 100**. As such, a bigger bounce should be contained to **8300 +/- 100**.”

Yesterday and today confirmed our thesis. And **W-a** has likely bottomed as the past two days were the biggest rally since the **W-3** top. Now, **W-a** of **W-b** has likely also topped. We expect **W-b** of **W-b** to drop to ideally **\$7600 +/- 100** before **W-c** of **W-b** rallies the index to ideally **8300 +/- 50**.

SP500 Outlook: Intermediate term (weeks to months) BEARISH. Short term (days to weeks) BULLISH.

At yesterday's low, the index reached the ideal $W-c = W-a$ target of 6644, as well as the ideal $W-c = 1.382x a$ target of 6636, by bottoming out at 6636. Except for the rally in early February, which lasted just over three days, the index has now experienced its largest rally in only two days. Therefore, the chances are increasing that the three-wave (a, b, c) $W-a$ of the $W-4$ has bottomed.

4th waves, like any other correction, consist of at least three waves: red $W-a$, b , and c . Although we cannot predict exactly how it will unfold—since no one has a crystal ball—we know that 4th waves are often flat (abc-abc-1,2,3,4,5), triangular (abc-abc-abc), or a mix of both. Since the

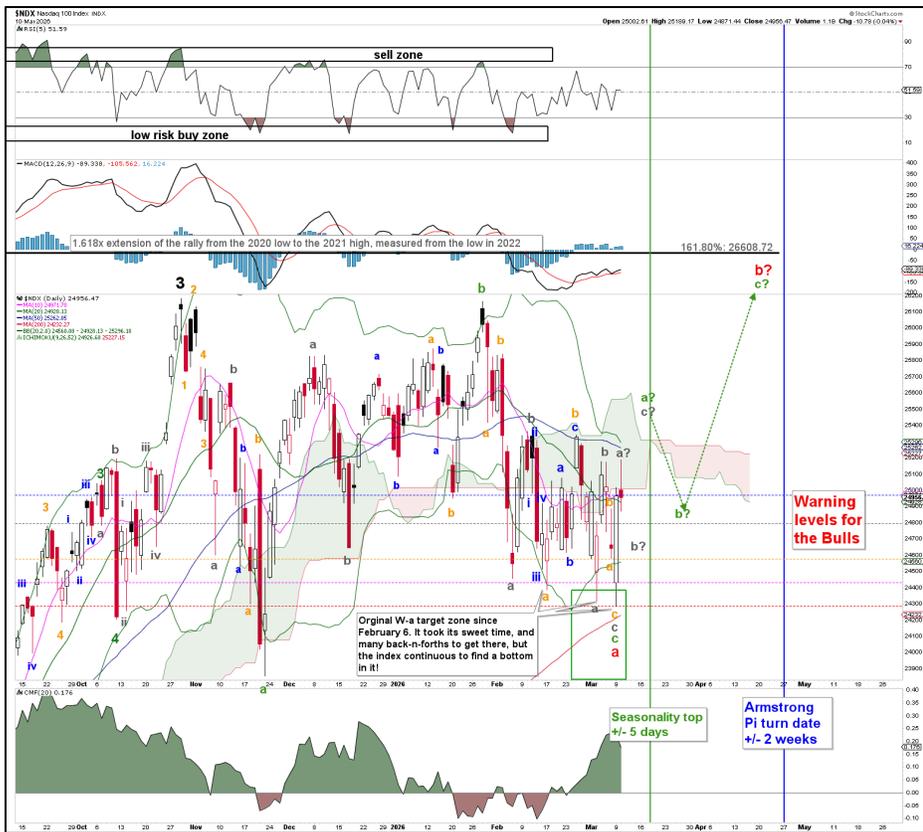

historic 2009 low, the larger 4th wave corrections in the current bull market have been flat corrections (2011, 2015/2016, 2018-2020). So, we should expect it to happen again.

In an irregular flat, the B-wave reaches a new ATH, as seen in 2011 and 2019. The future projection, based on mid-term election-year highs and lows and the Armstrong Pi-cycle turn dates (green, red, and blue timing boxes), is shown in Figure 2. It supports the development of such an irregular flat, contingent on price holding above 6636, the Bulls' fifth and final (red) warning level. After reaching the high, likely around late April, we should expect weakness until late September: the red C-wave.

Meanwhile, seasonality based on closing prices has a low around March 6, a high around March 11, a lower low around March 13, and exhibits a larger peak around March 20. So far, the index bottomed on a closing basis on March 6 and may have peaked today on March 10. Warning levels for the bulls are now set at: **6795, 6769, 6740, 6693, 6636.**

NDX Outlook: Intermediate term (weeks to months) BEARISH. Short term (days to weeks) BULLISH.

like the SP500, also this index suffers from TDS: Total Directionless Syndrom. Just look at the price action over the past month. Absolutely crazy. But also here we start to see light at the end of the tunnel, and as stated over and over again, to set the right expectations “4th waves, especially, as we have pointed out this week, are complex and confusing. In EW jargon, they consist of a-b-c moves. And these types of moves can always add another set of a-b-c. So, when an a-b-c in either way, up or down, completes, it can easily subdivide into another a-b-abc. This means to expect the unexpected.”

The last two days just proved that point. But despite yesterday’s lower low, but not lower close (!), the index is therefore still at the same level it was up to six months ago, and thus,

we haven’t altered our broader Elliott Wave count, which still indicates a move to roughly \$26600 for the red **W-b**, depending on the index staying above its warning levels for the Bulls set at **24967, 24795, 24579, 24429, 24289**. We’ve only had to update the daily price movements.

Thus, in the short term, the forecasted larger red **W-a** did reach its ideal \$24,200 ± 200 target zone, albeit via several unexpected brief detours, as the index, like the SPX, subdivided into a double corrective pattern since its ATH in October last year. The index can thus still be in a final three-wave **a-b-c** move to approximately \$26,600.

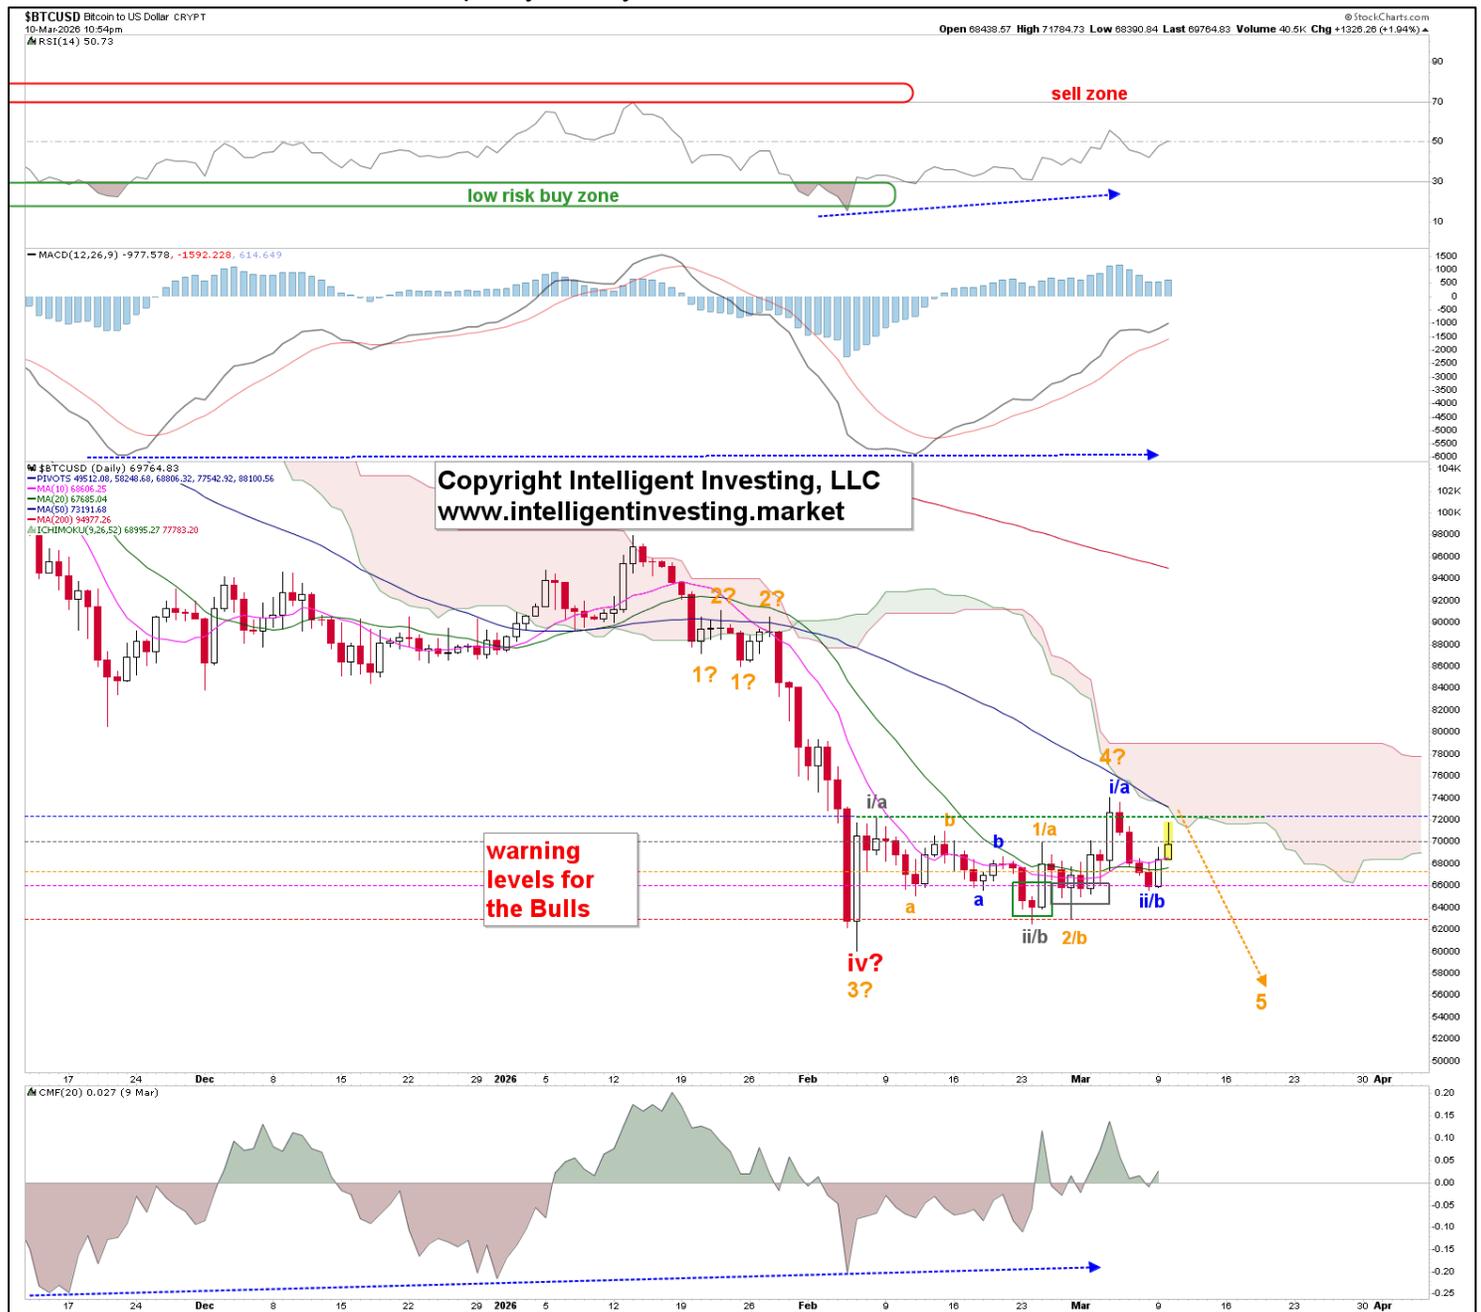

A break below this week’s low is simple; it means the **W-a** is becoming even more complex. But as long as yesterday’s low holds, we expect the **W-b** to be underway, subdividing into the **W-a,b,c** and **W-a-,b,c** patterns. A drop for **W-b** of **W-a** to \$24400-600 should not be unexpected, from where **W-c** of **W-a** can rally to ideally \$25400-600.

CRYPTO CURRENCIES

BTC Outlook: NEUTRAL

Remains range-bound, between 63-72K, so we can still be dealing with this pesky **W-4, 5** scenario. But, as last week, no critical levels have been broken yet, so we can keep the warning levels for the Bulls at **72226, 70116, 67407, 66148, 63030**. Thus, as nothing has changed from what we stated on Friday “we probably need weeks of additional price data before we can be confident about exactly what we’re dealing with. That’s just the simple truth. But, critical levels are holding for now, and please keep in mind that even if we see the **W-5**, it’s back up from there just as much.”

Thus, from a technical perspective, BTC clearly needs to rise above its declining 50d SMA (now at 73191) and then above its Ichimoku Cloud (at 79K) to target at least the declining 200d SMA (now at 94977). Thus, the crypto is still in an intermediate- to long-term bearish regime: price<50<200 and below its Cloud. The tight 9K range suggests a breakdown can target 54K (orange W-5 arrow), while a breakout can target 81K, propelling BTC above its Cloud, based on simple symmetry.

ETH Outlook: NEUTRAL

Remains range-bound, between 1900-2100, so we can still be dealing with this pesky **W-4, 5** scenario. But, as last week, no critical levels have been broken yet, so we can keep the warning levels for the Bulls at **1746, 1803, 1846, 1928, and 1995**. Thus, as nothing has changed from what we stated on Friday, *“we probably need weeks of additional price data before we can be confident about exactly what we’re dealing with. That’s just the simple truth. But, critical levels are holding for now, and please keep in mind that even if we see the **W-5**, it’s back up from there just as much.”*

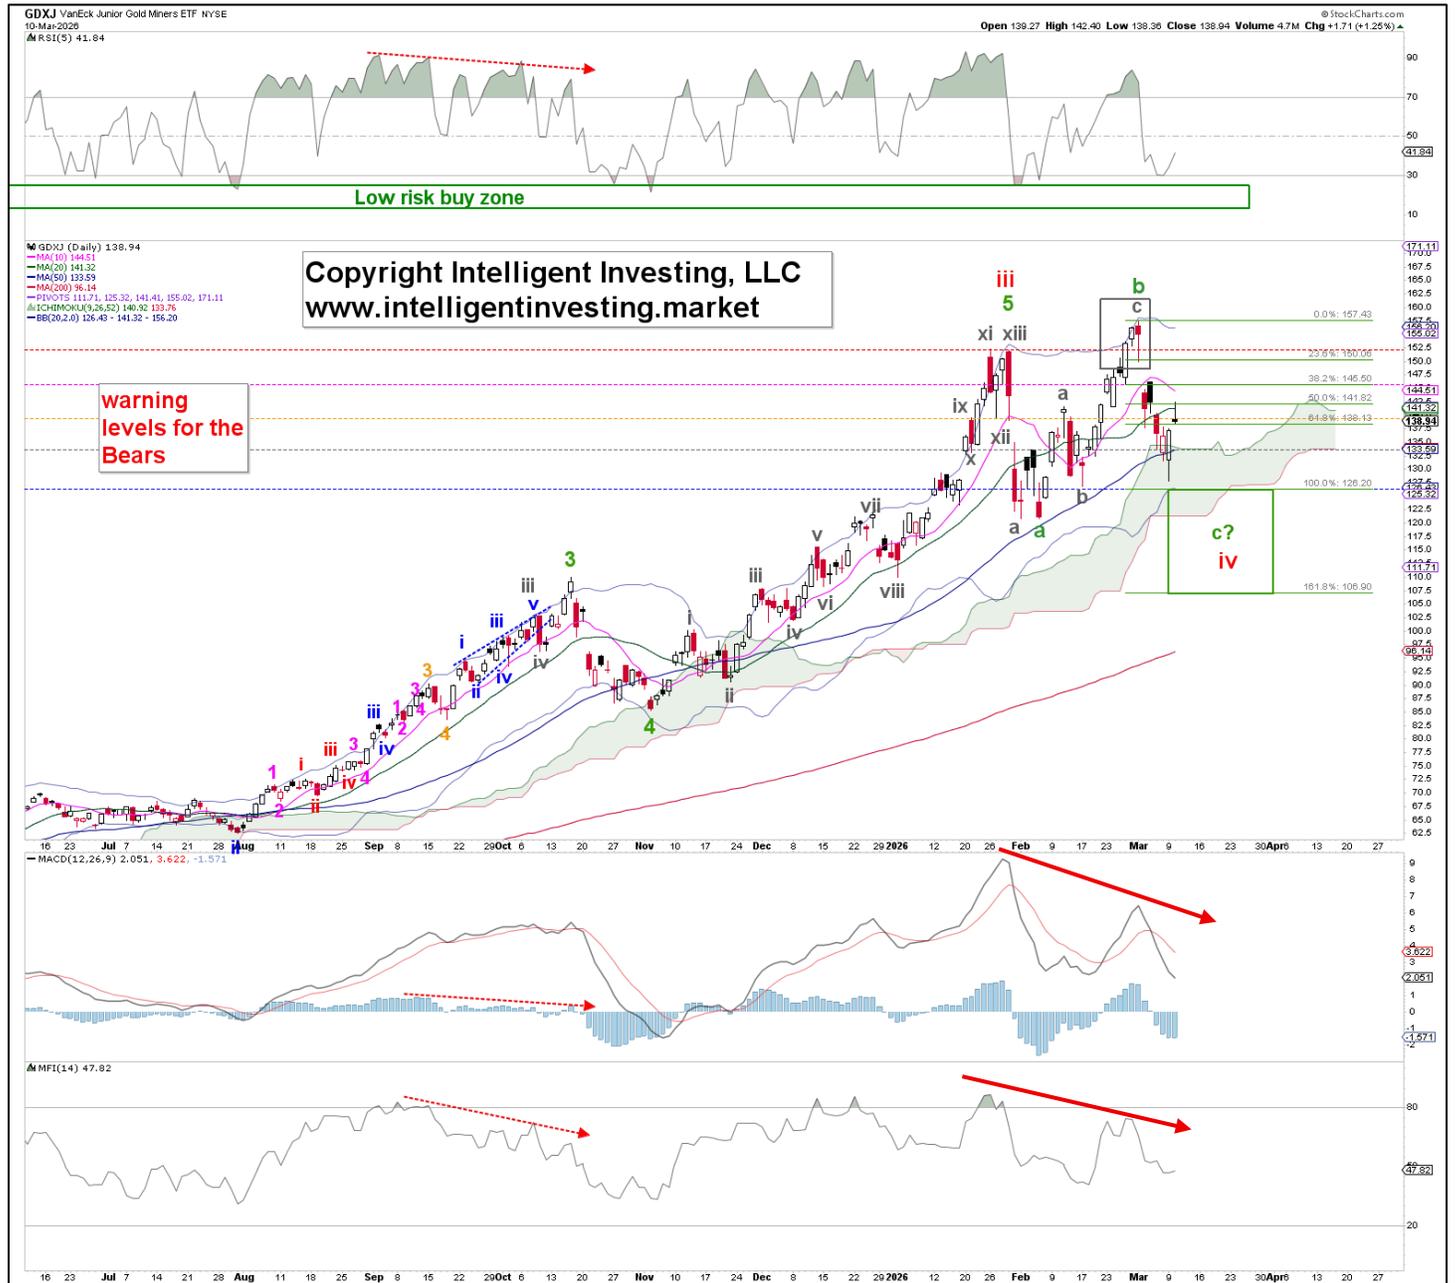

Thus, from a technical perspective, ETH clearly needs to rise above its declining 50d SMA (now at 2224) and then above its Ichimoku Cloud (at 2600) to target at least the declining 200d SMA (now at 3299). Thus, the crypto is still in an intermediate- to long-term bearish regime: price < 50 < 200 and below its Cloud. The tight 2K range suggests a breakdown can target 1700 (orange W-5 arrow), while a breakout can target 2300, propelling ETH above its Cloud, based on simple symmetry.

GOLD, MINERS & OIL

GDX Outlook: NEUTRAL

On Friday, we simply stated, "Let's keep it very simple: **W-c** of **W-iv** should be underway, contingent on holding below at least 152." The ideal target was set at 106-126, and yesterday the junior miners bottomed at 127.79. Thus, we may have an irregular running flat on our hands. This means the **W-c** is shorter than usual and fails to reach its ideal downside target. While we cannot exclude a subdividing **W-c** of **W-iv**, the potential is there for **W-v** to have already started as long as yesterday's low holds. As such, we are now neutral and no longer bearish.

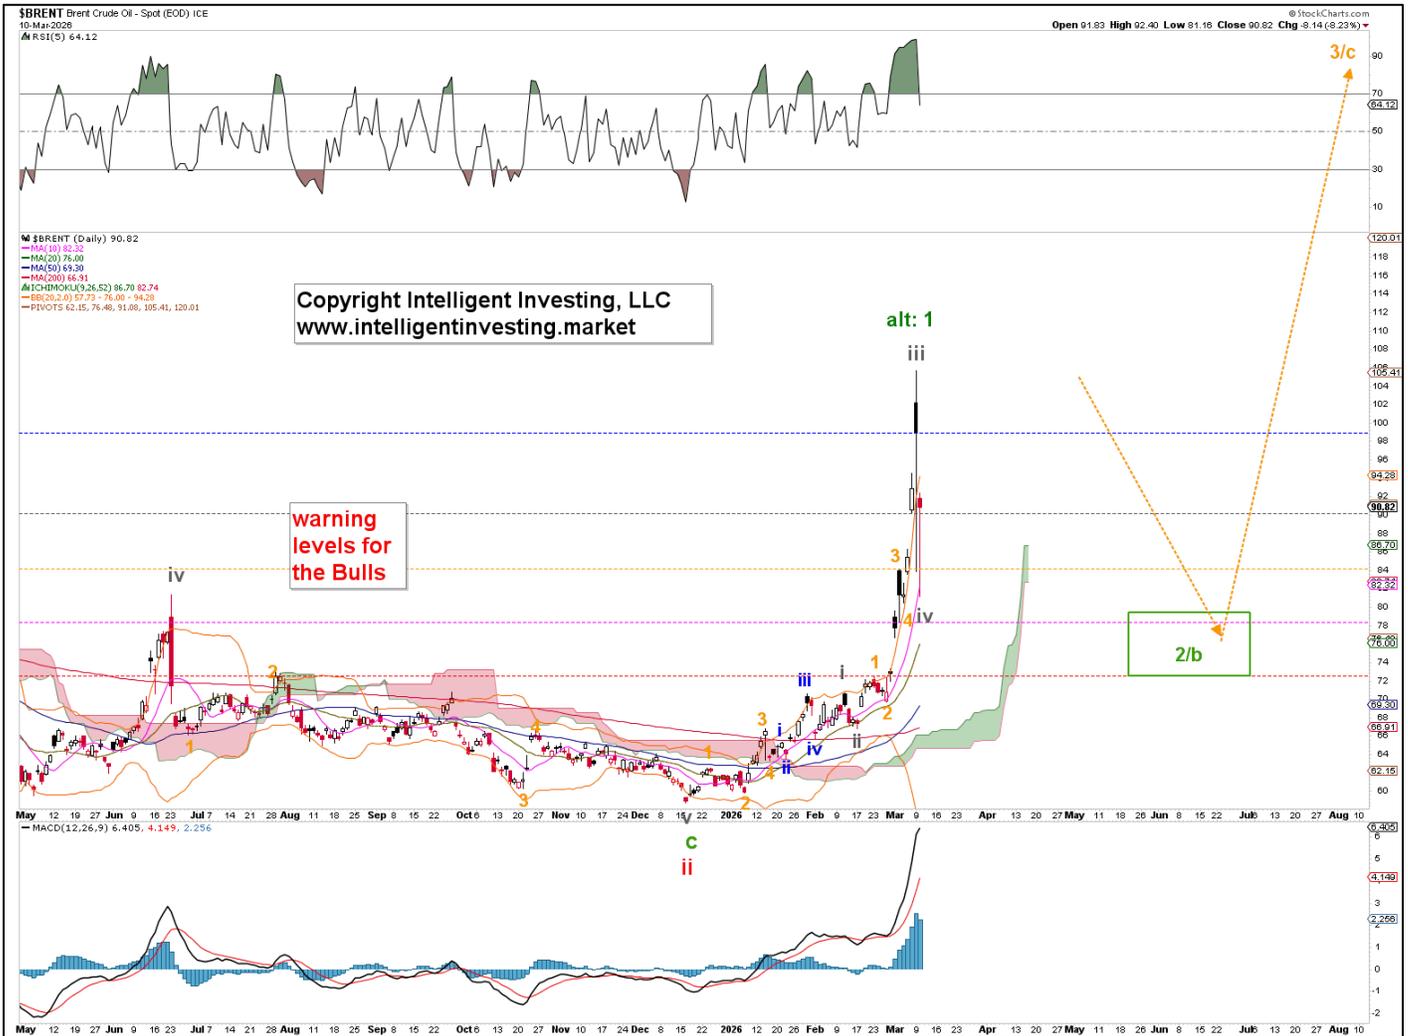

GOLD Outlook: NEUTRAL.

No changes from Friday, although the price action is sloppy: "*W-c* of *W-iv* should be underway, contingent on holding below at least 5400."

OIL Outlook: NEUTRAL. Target: 105+/-5

Holy smokes Batman, the super extended target zone was reached yesterday, and why we stated that we wouldn't chase it up there, and thank goodness we didn't as BRENT dropped almost 25% in a day. Thus, **W-1** may have already completed, though we cannot exclude one last **W-v** to about \$110. The warning levels for the bulls are set at **99, 90, 84, 78, and 72**.

TRADING IS BORING – JUST THE RULES, MA'AM*

- Short-term results are (more) random than intermediate- to long-term. Focus accordingly.
- An "edge" appears only through repetition.
- Thus, a trader's job is not to win, but to relentlessly repeat the same actions.
- Therefore, a trader doesn't wait for opportunities driven by the urge and desire to trade.
- Your responsibility is to follow the rules, and nothing more.
 - Thus, you act only because
 - *"The opportunity has arrived,"*
 - *"It's the rule,"*
 - *"There is no choice but to act."*
- You don't have the authority to decide *"whether or not to follow that rule."*
- Avoid setting a daily profit target.
 - It is irrelevant to you and beyond your control.
- If you are going to reflect, focus on failing to follow the rules. That will teach you!
- A trading system with a 50-50 win/loss ratio (WLR) and a 2-1 win/loss percentage (%), WLP) is still more effective than one with a 90-10 (WLR) and a 1-5 (WLP).
 - It's not about how many trades you win.
 - It's about cutting losers and allowing winners to run.

Did you make a "good trade" today? Well, kudos to you, but if you only looked at the trade's profit to decide whether it was good, you did it all wrong. Specifically, your P/L is unrelated to that assessment. A profit gained by breaking your rules is the worst trade because it creates a false sense of success in your mind. Conversely, a loss that occurs while perfectly following your rules is a valuable learning experience that helps build a long-term edge.

Unless you can accept this, you haven't truly started trading.

Lastly, the 1st rule in trading is to always minimize your losses! Profits are secondary... Know the difference.

*adapted from "Yumi 🌸🌸, @samuraipips358"

**NOT TRADING ADVICE

*BACKTESTED TRADING SYSTEM PERFORMANCES

Our new trading systems work best by applying the compounding principle, which involves reinvesting some or all of your profits in the next trade. The more you compound, the better the returns will be. Please review the tables below.

Do not trade positions bought without the system's signals using the system's trading signals. Additionally, please refrain from entering a position when the trade is already in progress; wait for a new trading signal.

These systems operate entirely independently of our analyses. Do not try to combine or correlate them. They track prices and trends based on several parameters, triggering buy, sell, or hold signals via if/then conditions. Sometimes our analysis is correct while the system is wrong, or vice versa. Or both can be right or wrong. Therefore, these systems complement our analyses and represent the ultimate trading experience: simply execute the signal. Refer to the previous page for what trading really is: a mindless, boring process of execution. Nothing more, nothing less.

The code for these trading systems is available for purchase. Please contact us for pricing details. It is written in Pine Script and can be directly integrated into TradingView, Alpaca, or Interactive Brokers (IBKR), allowing it to manage all your trading needs. Any AI, such as GROK or ChatGPT, can quickly translate code into another language if necessary.
