JOIN ME ON PEAKBOT*

THANK YOU TO ALL OF THOSE WHO ALREADY JOINED ME ON PEAKBOT. SO FAR, I AM **UP \$1022** IN CLOSED TRADES SINCE INCEPTION ON JULY 17!

Trade what I trade, without lifting a finger, by connecting your brokerage account through [PeakBot](https://peakbot.com/intelligent-investing-bot/) to my account: <https://peakbot.com/intelligent-investing-bot/>. **Starting at \$197/month.**

My goal is to make ~\$100/day, which is ~\$500/week and ~\$ 2,000/month, knowing well that not all market environments are conducive to such returns.

My strategy gives the market time to validate my Elliott Wave thesis and avoids being a victim of options' time decay (theta) when wrong. I trade at most 3x per day; positions are rarely >50% of my portfolio; I average down at most 2x (e.g., at the 3rd and 5th waves); and I hedge-trade around a core position if necessary (e.g., at the 2nd and 4th waves). Most trades are swing- or intra-day.

[W-4] Major Corrective Wave	[W-a] Intermediate Corrective	[W-c] Minor Corrective	50250-51250 Fib target zone
--	--	-------------------------------------	--

CURRENT WAVE POSITION

W-a of **W-4** should be subdividing in a three-wave structure, of which **W-a** and **W-b** have completed, and **W-c** is underway.

Yesterday's high was most likely **W-b** of **W-a**, right at the 76.4% retracement of **W-a**, and now **W-c** should be underway to ideally 50250-51250 depending on what Fib extension the **c-wave** will choose and if the **c-wave** is a regular impulse or morphs into an ending diagonal. The diagonal **C-wave** will reasonably match the seasonality pattern, with a choppy down path into ~August 12, then a bigger bounce (**W-b**) into ~August 19, followed by the next leg lower (**W-c**) into late September. All +/- 5 trading days.

WARNING LEVELS are shown on the chart. Percentages (%) indicate the chance the downtrend is over.

-----------------------------------	-------------------------------------	--------------------------------	-------------------------------------	---------------------------------

CURRENT WAVE POSITION

W-a of W-4 should be underway with a subdividing three- or five-wave structure developing.

The index lost the rising trendline (June 11, 26 lows + July 23/27 lows) that has contained every pullback since the June 9 low, opening the door to the 6960-7200 zone, with 7105 as the ideal target. However, the short-term chart shows significant overlap over the last five days, including today, suggesting that a diagonal C-wave is underway, targeting ideally 7225-7280, which aligns reasonably well with the upper end of the larger target zone. The diagonal C-wave will also match the seasonality pattern, with a choppy down path into ~August 12 (W-iii, iv, v), then a bigger bounce (W-b?) into ~August 19, followed by the next leg lower (W-c?) into late September. All +/- 5 trading days.

WARNING LEVELS are shown on the chart. Percentages (%) indicate the chance the downtrend is over.

[W-3] Major Impulse wave	[W-iv] Intermediate corrective wave	[W-a] Minor Corrective	~\$10,750+/-250 Fib target zone
---------------------------------------	--	-------------------------------------	---

CURRENT WAVE POSITION

W-a of **W-iv** had not yet ended, and could attempt for the next lower Fib-level at ~\$9,975ish

Thus, as we stated yesterday, “we can allow for one more small set of abc lower to the ideal target of ~\$10,500, but it feels like picking up pennies in front of a steam train, although there are no signs of a bottom yet.” That one more set happened, and extensions to \$9,975 can continue until we see at least a break above today’s high, and especially above \$11,611. Then we can track the **W-b** to ideally \$12,500-13,500, followed by a **W-c** possibly as low as ~\$ 8,000 to close that pesky April 8 gap!

WARNING LEVELS are shown on the chart. Percentages (%) indicate the chance the downtrend is over.

[W-4] Major Impulse Wave	[W-a] Intermediate Corrective wave	[W-c] Minor Corrective	~\$26,475-800 Fib targets
---------------------------------------	---	-------------------------------------	-------------------------------------

CURRENT WAVE POSITION

W-c of W-a of W-4 reached its ideal downside targets and is extending.

Yesterday, the ideal targets for the NDX (~\$27,400) and the NASDAQ (~\$24,550) were reached, and there were enough waves in place on the daily and hourly timeframe to consider the ending diagonal **W-c** as complete, but we had no confirmation yet. Thus, we warned that “Below today’s low and NDX26,750, which would be around the rising 200d SMA, is next.” This extension appears to be the case, so we look for \$ 26500 +/- \$250, with the possibility of subdividing **W-c/3** as shown on the NAS. Thus, if the indexes stay below Monday’s high (NDX28,460), we can allow for lower prices.

WARNING LEVELS are shown on the chart. Percentages (%) indicate the chance the downtrend is over.

CURRENT WAVE POSITION

W-c of W-iv should be unerway.

The index remains essentially range-bound, but today's candle suggests that W-c of W-iv is underway to ideally \$1650+/-50, contingent on staying below Monday's high (~\$1,780).

--	----------------------------------	-----------------------------------	--------------------------------------

CURRENT WAVE POSITION

W-2 of **W-v** should be underway, contingent on holding above \$62,474, subdividing into five smaller (orange) waves.

Slight adjustment of the wave count as the decline is now too long and too deep for a **W-1** and counts better as a **W-2** of **W-v**. Average seasonality appears to align reasonably well with the recent price action: an important low early July, rally into late-July to mid-August. Fall dip and then rally again. All dates are +/- 1 week.

WARNING LEVELS are shown on the chart. Percentages (%) indicate the chance the uptrend is over.

CURRENT WAVE POSITION

W-ii of **W-1** of **W-i** is most likely underway.

As stated on Friday "But, we still must see a break below \$1,748 to be more certain **W-ii** is underway. Otherwise, this pullback was only **W-iv** and **W-v** can then still target \$2050+/-50." So, while \$1,748 has not been broken yet, a W-ii, which can be shallower than "normal" should be underway.

---------------------------------------	---	----------------------------------	---------------------------------------	-------------------------------------

CURRENT WAVE POSITION

Today's drop was likely **W-iv**, with a **W-v** to come.

Since price broke above \$76.90, we are now tracking an impulse higher, with today's drop still part of a smaller 4th wave and a **W-v** still pending. GDX needs to hold above the key price levels to allow for a 5th wave. If not, we'll see one last marginally lower low as this rally was then a B-wave. Meanwhile, supporting a bullish resolution is that GOLD's seasonality is Bullish for the rest of the year (see next section), and GOLD is due for an important mid-cycle low, based on the half-period harmonic of its larger 13.5-month cycle: https://x.com/mcclellanosc/status/2082105753612218538?s=12&t=og5_bFJdNsKNF2655kxwPA

CURRENT WAVE POSITION

W-i of **W-5** is likely underway, contingent on holding above \$3,941.

W-i of **W-5** should be subdividing with a nested **1-2**, **i-ii** setup, with **W-ii** about to bottom. All contingent on holding above \$3,960. Seasonality is Bullish for the rest of the year, as GOLD bottomed at around the same time(s) seasonality does in mid-term years. These are all +/-5 trading-day dates, btw. Meanwhile, Gold is due for an important mid-cycle low, based on the half-period harmonic of its larger 13.5-month cycle: https://x.com/mcclellanosc/status/2082105753612218538?s=12&t=og5_bFJdNsKNF2655kxwPA.

*BACKTESTED TRADING SYSTEM PERFORMANCES

Our new trading systems work best when you apply the compounding principle, which involves reinvesting some or all your profits into the next trade. The more you compound, the better the returns will be. Please review the tables below.

Do not trade positions bought without the system's signals using the system's trading signals. Additionally, please refrain from entering a position when the trade is already in progress; wait for a new trading signal.

These systems operate entirely independently of our analysis. Do not try to combine or correlate them. They track prices and trends across several parameters, triggering buy, sell, or hold signals based on if/then conditions. Sometimes our analysis is correct while the system is wrong, or vice versa. Or both can be right or wrong. Therefore, these systems complement our analyses and represent the ultimate trading experience: simply execute the signal. Refer to the previous page for what trading really is: a mindless, boring process of execution. Nothing more, nothing less.

The code for these trading systems is available for purchase. Please contact us for pricing details. It is written in Pine Script and can be integrated directly with TradingView, Alpaca, or Interactive Brokers (IBKR), enabling it to manage all your trading needs. Any AI, such as GROK or ChatGPT, can quickly translate code into another language if necessary.
