JOIN ME ON PEAKBOT*

THANK YOU TO ALL OF THOSE WHO ALREADY JOINED ME ON PEAKBOT. SO FAR, I AM **UP ~\$1480** IN CLOSED TRADES SINCE INCEPTION ON JULY 17!

Trade what I trade, without lifting a finger, by connecting your brokerage account through [PeakBot](https://peakbot.com/intelligent-investing-bot/) to my account: <https://peakbot.com/intelligent-investing-bot/>. **Starting at \$197/month.**

My goal is to average ~\$100/day, which is ~\$500/week and ~\$2,000/month, while knowing full well that not all market environments are conducive to those returns.

My strategy gives the market time to validate my Elliott Wave thesis and avoids being a victim of options' time decay (theta) when wrong. I trade at most 3x per day; positions are rarely >50% of my portfolio; I average down at most 2x (e.g., at the 3rd and 5th waves); and I hedge-trade around a core position if necessary (e.g., at the 2nd and 4th waves). Most trades are swing- or intra-day.

Requirements:

- \$10K investment minimum
- Tradier, Schwab, or Tasty Trade account

CURRENT WAVE POSITION

To 4th or not to 4th, that **REMAINS the question**, as today price remained in the ideal **W-4** target zone. See chart 1. The index is still in the 7640s. So, a break below this week’s low (7507) will confirm **W-5**, with a serious warning for the Bulls below 7550.

The alternative therefore remains: a larger ending diagonal. See chart 2. This path is operable on a break above 7756, with full confirmation above 7771. We have penciled in the ideal path for the **W-v**: **W-1** peaked today, **W-2** drop to 7560+/-20. **W-3** rally to 7800+/-20, **W-4** drop to 7720+/-20, followed by a final **W-5** to ideally 7860+/-20, which would match the larger (gray) 161.80% extension at 7864 as well as the “**v=0.618x(i+iii)**” extension.

WARNING LEVELS are shown on the chart. Percentages (%) indicate the chance that the uptrend or downtrend is over.

CHART 1

CHART 2

Below, we have plotted all the FED rate decisions since 2015, when they started changing interest rates for the first time since December 2008, as well as how the markets performed on average after each such change. Overall, rate hikes are received more negatively than rate cuts, but the markets just seem to do what they were already doing, and most of it is noise in the bigger picture; i.e., there's not one single stand-out market response. This essentially confirms our thesis that the market beats its own drum and that whatever the FED's rate decision is, it doesn't matter too much to the overall trend. See 2022 and 2023, for example: the market went down in the face of rate hikes (2022) but also went up (2023).

[W-3] Major Corrective	[W-iv] Intermediate corrective	[W-c] Minor Impulse	1832 Invalidation level	1625-50 Fib target zone
-------------------------------------	---	----------------------------------	--------------------------------------	--------------------------------------

CURRENT WAVE POSITION

The weekly and monthly chart align, showing that the index is in **W-iv** of **W-3** with an ideal target at 1625-50. **W-v** of **W-3** should then target ~2000. Thus, the risk/reward is skewed towards reward at this stage. A break above 1832 will confirm this wave count, with a serious warning for the bears above 1750.

WARNING LEVELS are shown on the chart. Percentages (%) indicate the chance the uptrend or downtrend is over.

CHART 1 (WEEKLY)

CHART 2 (MONTHLY)

MARKET BREADTH & SENTIMENT

Outlook: Medium-term (weeks to ~6 months) BULLISH. Short-term (days to ~2 weeks) NEUTRAL

The most important market breadth indicators: the A/D line, in this order (NYAD, SPXAD, Common Stock Only NYAD) continue to make lower lows and show no signs of a reversal: **BEARISH**.

The 52w new High intermediate-term trend indicator (4th chart) remains on a sell, as does the PMO short-term trend indicator despite the past two days: **BEARISH**

The 2nd most important market breadth indicator, such as the NYMO, remains negative, but positive divergence is building like the decline in March. This setup can support continued lower prices over the next 1-2 weeks. Meanwhile, the summation index (NYSI) is at -300 and is thus oversold. But it has fallen below that level ~40 times since 1998, so it is not uncommon. However, the NYSI is clearly racing toward an important low. The same applies to the SPXMO and SPXSI (3rd and 4th chart): **NEUTRAL, as we have not seen a significant MO reversal (like in April).** Note that divergence on the SPXMO also often lasts ~2 weeks before it matters (green dotted arrows).

Sentiment, often a contrarian indicator, especially at important lows, is getting negative: **BULLISH**

---------------------------------------	---	----------------------------------	---------------------------------------	-------------------------------------

CURRENT WAVE POSITION

Although we can still allow for one smaller **W-v** to \$90-88; as stated yesterday “...it is not necessary as there are enough scribbles in place to consider **W-c** of **W-ii** as complete.” Thus today we present the bullish count: **W-iii** is getting started. All contingent on holding above this week’s low at 91.19. Below it and deeper into the red/green target zone it is (88+/-2).

WARNING LEVELS are shown on the chart. Percentages (%) indicate the chance the uptrend is over.

[W-5] Major Impulse wave	[W-iii] Intermediate corrective	[W-1] Minor corrective	62.32 Invalidation level	59+/-2 Fib target zone
--------------------------------	---------------------------------------	------------------------------	--------------------------------	------------------------------

CURRENT WAVE POSITION

Although we can still allow for one smaller **W-v** to ~\$1200; as stated yesterday “...it is not necessary as there are enough scribbles in place to consider **W-c** of **W-ii** as complete (especially for SILVER).” Thus today we present the bullish count: **W-iii** is getting started. All contingent on holding above this week’s low. Below it and deeper into the red/green target zone it is (See charts for price levels).

Thus, the risk/reward remains heavily skewed towards reward. As such we are now **NEUTRAL** on **GOLD** and **SILVER**. More upside and we will turn **BULLISH**.

WARNING LEVELS are shown on the chart. Percentages (%) indicate the chance the uptrend is over.

With today's price action, we continue to track two smaller 4th wave counts: either **W-iv** of **W-3** is becoming complex (see BRENT), or **W-3** of **W-iii/c** of **W-3/c** has topped (see WITC). Regardless, higher prices are still expected for **W-5** and **W-v**, as shown, contingent on holding above the invalidation levels.

*BACKTESTED TRADING SYSTEM PERFORMANCES

Our new trading systems work best when you apply the compounding principle, which involves reinvesting some or all your profits into the next trade. The more you compound, the better the returns will be. Please review the tables below.

Do not trade positions bought without the system's signals using the system's trading signals. Additionally, please refrain from entering a position when the trade is already in progress; wait for a new trading signal.

These systems operate entirely independently of our analysis. Do not try to combine or correlate them. They track prices and trends across several parameters, triggering buy, sell, or hold signals based on if/then conditions. Sometimes our analysis is correct while the system is wrong, or vice versa. Or both can be right or wrong. Therefore, these systems complement our analyses and represent the ultimate trading experience: simply execute the signal. Refer to the previous page for what trading really is: a mindless, boring process of execution. Nothing more, nothing less.

The code for these trading systems is available for purchase. Please contact us for pricing details. It is written in Pine Script and can be integrated directly with TradingView, Alpaca, or Interactive Brokers (IBKR), enabling it to manage all your trading needs. Any AI, such as GROK or ChatGPT, can quickly translate code into another language if necessary.
