JOIN ME ON PEAKBOT*

THANK YOU TO ALL OF THOSE WHO ALREADY JOINED ME ON PEAKBOT. SO FAR, I AM **UP ~\$1775** IN CLOSED TRADES SINCE INCEPTION ON JULY 17!

Trade what I trade, without lifting a finger, by connecting your brokerage account through [PeakBot](https://peakbot.com/intelligent-investing-bot/) to my account: <https://peakbot.com/intelligent-investing-bot/>. **Starting at \$197/month.**

My goal is to average ~\$100/day, which is ~\$500/week and ~\$2,000/month, while knowing full well that not all market environments are conducive to those returns.

My strategy gives the market time to validate my Elliott Wave thesis and avoids being a victim of options' time decay (theta) when wrong. I trade at most 3x per day; positions are rarely >50% of my portfolio; I average down at most 2x (e.g., at the 3rd and 5th waves); and I hedge-trade around a core position if necessary (e.g., at the 2nd and 4th waves). Most trades are swing- or intra-day.

DOW JONES INDUSTRIAL AVERAGE (DOW) & NYSE

Outlook: Medium-term (weeks to ~6 months) **BEARISH**. Short-term (days to ~2 weeks) **NEUTRAL**

WAVE LABEL KEY: BEARISH COUNT

[W-4] Major Impulse Wave	[W-a] Intermediate Impulse	[W-4,5]? Minor Impulse	53746 Invalidation level	50000+/-500 Fib target zone
---------------------------------------	---	-------------------------------------	---------------------------------------	--

CURRENT WAVE POSITION

Like we did for the SPX (see next page), also for the DOW we wondered: “to 4th or not to 4th that is the question.” A smaller (gray) 4th wave (iv?) or part of the larger green **W-4**. Since last week, the “**W-a/i** low at 51962” had not been breached; we could not know. Today that level was breached, so the bears’ only hope is for a **Green W-4** to 52215-975 (see chart 1), with an ideal target of ~52500. Above 52975, the alternative is in play: chart 2.

Please note that the DOW has retraced the entire five-day July rally and is therefore in a different wave count than all other indexes (and vice versa, obviously). This also suggests that a major low was not struck last week, as 9.9 out of 10 times, indexes get back in sync at major lows, while they top out at different times!

Meanwhile, the DOW remains below its CLOUD and below its declining 10-, 20-, and 50d SMA, which are now bearishly stacked (price<10<20<50). Thus, the 200d SMA remains a logical target if the warning levels for the Bears hold.

WARNING LEVELS are shown on the chart. Percentages (%) indicate the chance the uptrend is over.

S&P500 (SPX)

Outlook: Medium-term (weeks to ~6 months) BEARISH. Short-term (days to ~2 weeks) BULLISH.

WAVE LABEL KEY FOR BULLISH WAVE COUNT

[W-3] Major Impulse	[W-c] Intermediate Impulse	[W-5] Minor Impulse	[W-v] Minute Impulse	7507 Invalidation level	~7775+/-15 Fib target zone

WAVE LABEL KEY FOR VERY BULLISH WAVE COUNT

[W-3] Major Impulse	[W-c] Intermediate Impulse	[W-5] Minor Impulse	[W-iii] Minute Impulse	[W-1] Micro Impulse	7507 Invalidation level	~8525-8745 Fib target zone
----------------------------------	---	----------------------------------	-------------------------------------	----------------------------------	--------------------------------------	---

CURRENT WAVE POSITION

To 4th or not to 4th, that is the question, has now been answered. It is resolute **NO**, as the index broke above 7756 and even 7771. Thus, we now focus on the ending diagonal count toward 7860-7890. See charts 1 and 3 below. But as always, when one door closes, another opens. In this case, we are also tracking a very bullish wave count, in which the current rally since last Wednesday's low is only **W-1** of **W-iii** of a subdividing **W-5** (see charts 2 and 4 below). Both target the same upside initially (~7860-90), but for one option that's all she wrote and the index will drop to 7000+/-100, whereas for the other option we'll see a pullback to around 7650+/-50 from where we'll see the next rally to 8100+, etc.

Thus, **both options point to the same upside target zone over the next few days, followed by a pullback**. That pullback must always stay above 7507 (last week's low) to allow for 8500-8700. Below it, 6900-7100 is next. **Thus, 7507 is now the dividing line in the sand for the Bulls**. Since we cannot predict the future, we cannot know which path the market will take. It all depends on the new information that will become available over the next few days to weeks.

WARNING LEVELS are shown on the chart. Percentages (%) indicate the chance that the uptrend or downtrend is over.

-------------------------------------	--	--------------------------------------	--	---------------------------------------	-------------------------------------

CURRENT WAVE POSITION

As the index remains above the critical 11056 level set on September 3, we can still count the current rally as a c-wave in a larger complex B/2nd wave. See charts 1 and 2. The ideal upside target is ~13000 as long as last week's low holds. Due to the sideways price action over the last 2 months, we can also count it as a Bullish sequence (see charts 3 and 4) on the next page, where **W-iii** of **W-5** of **W-v** of **W-3** is already underway. The issue we have is last week's low, as it is almost a 90% retracement of the potential gray **W-i** rally. 2nd waves (gray **W-ii**) are hardly ever that long/deep. B-waves are. Thus, while it is technically possible and valid, this index still has more to prove about its true intentions. But if last week's low holds, we must look for higher prices.

WARNING LEVELS are shown on the chart. Percentages (%) indicate the chance the downtrend is over.

-------------------------------------	--	----------------------------------	---	---------------------------------------	---------------------------------------

CURRENT WAVE POSITION

As we stated last week, “The market floor has held numerous times, and if the index stays above it, downside is not going to happen. So, we must continue to present the alternative, which has the index in an irregular **b-wave** of **W-4**, with **W-b** of **W-b** at Wednesday’s low, and **W-c** of **W-b** now underway; with a serious warning for the Bulls below 28606.” That “no downside” was and remains correct, so we continue to look for higher prices, while raising the warning levels for the Bulls. See chart 1.

As we did for the SPX, we now also need to present a very bullish wave count for the NDX, which will target around 35000 (see chart 2). In that case, the index is now in **W-i** of **W-3** of **W-v**, etc. It should ideally top out for this **W-i** at around 30600-31000, like the irregular B-wave shown in chart 1. But instead of dropping below last week’s low, the index will, in this case, ideally bottom out at around 29500 +/- 250 for **W-ii** of **W-3** and then rally to ~33000 for **W-iii** of **W-3**, etc. We will present this option in detail tomorrow, but monthly chart 2 supports this thesis.

Thus, **both options point to the same upside target zone over the next few days, followed by a pullback**. That pullback must always stay above 28753 (last week’s low) to allow for ~35000. Below it, 26000+/-1000 is next. **Thus, 28753 is now the dividing line in the sand for the Bulls**. Since we cannot predict the future, we cannot know which path the market will take. It all depends on the new information that will become available over the next few days to weeks. Please note how far the NDX traded and closed outside the upper Bollinger band (see chart 1); it reminds us of the DOW one day before it topped (see chart 1 for the DOW; red circle).

--	----------------------------------	-----------------------------------	---------------------------------------	-----------------------------------

CURRENT WAVE POSITION

Our preferred view that “*W-v of W-1 is most likely underway*” remains correct and therefore remains the preferred view until proven otherwise. We are now NEUTRAL, as there are enough waves in place to consider W-1 complete. However, it requires at least a break below 80093 and ultimately 74995 to confirm. In addition, so far the MACD is following a classic W-I to W-V pattern as we outlined last week for ETH (see next page). So, while there may be more upside left as 5th waves tend to extend in cryptos, to \$93-94.5K; it is at this stage likely prudent to become a bit more defensive.

WARNING LEVELS are shown on the chart. Percentages (%) indicate the chance the uptrend is over.

CURRENT WAVE POSITION

Our preferred view that “*W-v of W-3 is most likely underway*” remains correct and therefore remains the preferred view until proven otherwise. However, as for BTC, there are enough waves in place to consider **W-i** complete. But it requires at least a break below 2480 and ultimately 2358 to confirm. In addition, so far the MACD is following a classic W-I to W-V pattern as we outlined last week. CURRENT WAVE POSITION

Although we can still allow for one smaller **W-v** to ~\$1200, as stated last week, “...it is not necessary as there are enough scribbles in place to consider **W-c** of **W-ii** as complete (especially for SILVER).” Thus today we present the bullish count: **W-iii** is getting started. All contingent on holding above this week’s low. Below it and deeper into the red/green target zone it is (See charts for price levels).

Thus, the risk/reward remains heavily skewed towards reward. As such, we are now **NEUTRAL** on GOLD and SILVER. More upside and we will turn **BULLISH**.

WARNING LEVELS are shown on the chart. Percentages (%) indicate the chance the uptrend is over.

With today's price action, we can now also label BRENT using WITC's count or **W-3** of **W-iii/c** of **W-3/c** has topped (see WITC), and **W-4** is underway, as shown, contingent on holding above the invalidation levels. We don't want to see price drop much more, or else the impulse structure becomes less reliable, which would mean the larger **W-2/b** could become (Very) complex... yikes... But for now, we have no signs of that.

*BACKTESTED TRADING SYSTEM PERFORMANCES

Our new trading systems work best when you apply the compounding principle, which involves reinvesting some or all your profits into the next trade. The more you compound, the better the returns will be. Please review the tables below.

Do not trade positions bought without the system's signals using the system's trading signals. Additionally, please refrain from entering a position when the trade is already in progress; wait for a new trading signal.

These systems operate entirely independently of our analysis. Do not try to combine or correlate them. They track prices and trends across several parameters, triggering buy, sell, or hold signals based on if/then conditions. Sometimes our analysis is correct while the system is wrong, or vice versa. Or both can be right or wrong. Therefore, these systems complement our analyses and represent the ultimate trading experience: simply execute the signal. Refer to the previous page for what trading really is: a mindless, boring process of execution. Nothing more, nothing less.

The code for these trading systems is available for purchase. Please contact us for pricing details. It is written in Pine Script and can be integrated directly with TradingView, Alpaca, or Interactive Brokers (IBKR), enabling it to manage all your trading needs. Any AI, such as GROK or ChatGPT, can quickly translate code into another language if necessary.
