JOIN ME ON PEAKBOT*

THANK YOU TO ALL OF THOSE WHO ALREADY JOINED ME ON PEAKBOT. SO FAR, I AM **DOWN**

~\$2510 IN CLOSED TRADES SINCE INCEPTION ON JULY 17!

Trade what I trade, without lifting a finger, by connecting your brokerage account through [PeakBot](https://peakbot.com/intelligent-investing-bot/) to my account: <https://peakbot.com/intelligent-investing-bot/>. **Starting at \$197/month.**

My goal is to average ~\$100/day, which is ~\$500/week and ~\$2,000/month, while knowing full well that not all market environments are conducive to those returns.

My strategy gives the market time to validate my Elliott Wave thesis and avoids being a victim of options' time decay (theta) when wrong. I trade at most 3x per day; positions are rarely >50% of my portfolio; I average down at most 2x (e.g., at the 3rd and 5th waves); and I hedge-trade around a core position if necessary (e.g., at the 2nd and 4th waves). Most trades are swing- or intra-day.

CURRENT WAVE POSITION

Presenting the hourly scribbles again, which show that either **W-2** is completing, with a possible one last **W-iv**, **v** sequence for **W-c** of **W-2**, while we can also allow for a complex 4th wave. As long as the September low at 7507 holds, we can look for higher prices, and the recent price action is so far an overlapping move to the downside, where last week’s high was right in the ideal **W-b** target zone, and the current decline is gunning for the ideal **W-2** target zone. Above last week’s high and **W-2** or **W-4** completed. Above 8000, and we can remove the option in chart 2 as well and focus on the one in chart 1.

As shown for the DOW/NYSE, several market breadth indicators are also extremely oversold for the SPX (see page 8), with little room left for more downside. And when all selling is done, only buying is left.

WARNING LEVELS are shown on the chart. Percentages (%) indicate the chance that the uptrend or downtrend is over.

CURRENT WAVE POSITION

Combining the long-term (chart 2) with the short-term, the market would look much better with another rally (**W-v**) to the ideal target zone shown in the table above, which aligns with the bigger-picture target for **W-3**. Thus, for as long as the September 3 low at 11056 holds, we can look higher.

CHART 2

The NYMO is still performing as it did earlier this year (black boxes with similar orange, blue, and red vertical line setups), and the similar double positive divergence noted last week remains. While the NYSE closed lower today, the NYMO closed higher; the setup is solidifying.

Meanwhile, the NYSE is getting ridiculously oversold, with its RSI5 now at 1.8 and an actual reading of -665. As stated in earlier updates, these are setups associated with double-digit corrections and severe bear markets; not 5-7% pullbacks as we're currently seeing in the DOW, NYSE, and SMALL. So, **a truly unique and potentially contrarian reading**. Note that corrections can happen in price, time, and "stealth," i.e., under the hood. It appears that the latter is the case (see also the SPXMO and SPXSI)

The SPXMO still shows positive divergence: a green dotted arrow with higher highs and higher lows, but it remains negative. It must turn positive to confirm the next bull run. As such, the SPXSI is getting increasingly oversold, with a daily RSI5 and actual reading at levels seen only primarily during steep crashes and bear markets. **Overall, this setup most resembles late 2016**

Meanwhile, we can now start tracking a possible Zweig breadth thrust event, as the indicator closed below 0.40 yesterday.

[W-v] Intermediate Impulse	[W-2] Minor Impulse	87336 Invalidation level	65000-67000 Fib target zone
---	----------------------------------	---------------------------------------	--

CURRENT WAVE POSITION

Our preferred view remains that **W-v** is underway until proven otherwise, with **W-1** of **W-v** subdividing into five smaller grey waves (see chart 1). However, there are enough waves in place to consider **W-1** of **W-v** complete. But it still needs at least a break below 80093, and ultimately 74955, to confirm. In addition, the MACD is so far following a classic impulse pattern as well, as we outlined last week. So, while there may be more upside to \$93K+, things are behaving as if a larger intermediate top has been struck, but price has not given us any clues yet. If **W-2** is underway, we expect it to last several months as well.

WARNING LEVELS are shown on the chart. Percentages (%) indicate the chance the uptrend is over.

CURRENT WAVE POSITION

Our preferred view remains that **W-5** is underway until proven otherwise; with **W-i** of **W-5** subdividing into five smaller green waves (see chart 1). However, as for BTC, there are enough waves in place to consider **W-i** of **W-5** complete. But it still needs at least a break below 2480, and ultimately 2358, to confirm. In addition, the MACD is so far following a classic W-I to W-V pattern, as we outlined last week. So, while there may be more upside to \$3000+, things are behaving as if a larger intermediate top has been struck, but price has not given us any clues yet. *BACKTESTED TRADING SYSTEM PERFORMANCES

Our new trading systems work best when you apply the compounding principle, which involves reinvesting some or all your profits into the next trade. The more you compound, the better the returns will be. Please review the tables below.

Do not trade positions bought without the system's signals using the system's trading signals. Additionally, please refrain from entering a position when the trade is already in progress; wait for a new trading signal.

These systems operate entirely independently of our analysis. Do not try to combine or correlate them. They track prices and trends across several parameters, triggering buy, sell, or hold signals based on if/then conditions. Sometimes our analysis is correct while the system is wrong, or vice versa. Or both can be right or wrong. Therefore, these systems complement our analyses and represent the ultimate trading experience: simply execute the signal. Refer to the previous page for what trading really is: a mindless, boring process of execution. Nothing more, nothing less.

The code for these trading systems is available for purchase. Please contact us for pricing details. It is written in Pine Script and can be integrated directly with TradingView, Alpaca, or Interactive Brokers (IBKR), enabling it to manage all your trading needs. Any AI, such as GROK or ChatGPT, can quickly translate code into another language if necessary.
