JOIN ME ON PEAKBOT*

THANK YOU TO ALL OF THOSE WHO ALREADY JOINED ME ON PEAKBOT. SO FAR, I AM DOWN ~$2000 IN CLOSED TRADES SINCE INCEPTION ON JULY 17!

Trade what I trade, without lifting a finger, by connecting your brokerage account through PeakBot to my account: https://peakbot.com/intelligent-investing-bot/. **Starting at $197/month**.

My goal is to average ~$100/day, which is ~$500/week and ~$2,000/month, while knowing full well that not all market environments are conducive to those returns.

My strategy gives the market time to validate my Elliott Wave thesis and avoids being a victim of options' time decay (theta) when wrong. I trade at most 3x per day; positions are rarely >50% of my portfolio; I average down at most 2x (e.g., at the 3rd and 5th waves); and I hedge-trade around a core position if necessary (e.g., at the 2nd and 4th waves). Most trades are swing- or intra-day**.**

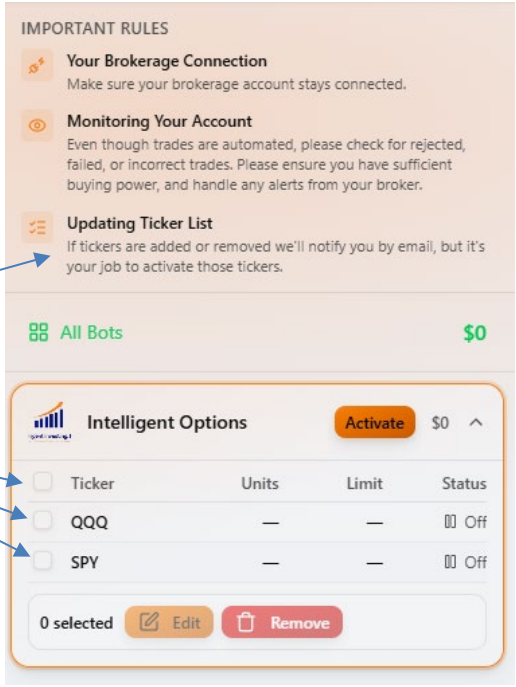

Requirements:

- $10K investment minimum
- Tradier, Schwab, or Tasty Trade account

DOW JONES INDUSTRIAL AVERAGE (DOW) & NYSE

Outlook: Medium-term (weeks to ~6 months) BULLISH. Short-term (days to ~2 weeks) BULLISH

WAVE LABEL KEY: BULLISH COUNT

WAVE LABEL KEY: BEARISH COUNT

[W-3] Major Impulse Wave	[W-b] Intermediate Impulse	[W-a] Minor Impulse	54744 Invalidation level	53250+/-500 Fib target zone

CURRENT WAVE POSITION

No changes from yesterday as the DOW has essentially gone sideways over the last 3-4 days. Note the NYSE is doing much better and formed a bullish reversal candle today, from around the 62% retracement of the recent four-day rally. Meanwhile, its MACD recently gave a buy signal. Thus, a breakout targets 24500+/-200. That will align with the gray W-c target zone for the DOW.

WARNING LEVELS are shown on the chart. Percentages (%) indicate the chance the downtrend is over.

CURRENT WAVE POSITION

There's still too little price data to differentiate between the two options, but the general direction for now should be higher, even with the last two days' pullback, if only for blue **W-v** of orange **W-c** -in the form of an overlapping ending diagonal- of gray W-v, etc., which should ideally reach ~7910. Thus, as stated yesterday, "[*Tuesday's] high at 7844 seems to have fallen short, allowing for a subdividing upside move";* this subdivision is what we're most likely seeing now.

WARNING LEVELS are shown on the chart. Percentages (%) indicate the chance that the uptrend is over.

[W-3] Major Corrective	[W-iv] Intermediate Corrective	[W-b] Minor corrective	[W-c] Minute corrective	14655 Invalidation level	14000+/-500 Fib target zone

CURRENT WAVE POSITION

So far, nothing is out of the ordinary: the index topped at the ideal W-iii of W-3 level on Tuesday and has reached the ideal W-iv of W-3 zone. Now the bulls must hold the line and rally price above Tuesday's high to seal the W-v of W-3 move to 14250+/-250. A drop below 12,200 and especially 12,016 will not be a good sign and will shift the odds in favor of the bearish wave count (chart 2)

CURRENT WAVE POSITION

Another 61.80% retracement (**W-2?**) of a recent rally. In this case, the rally from the potential **W-ii** low on September 28 to Tuesday's high: **W-1**. Thus, if the Bulls can rally price above that high, **W-3** of **W-iii** of **W-3** is underway, ideally to ~32650. See chart 1. If the index drops below that low, with a serious warning below 30274, the Bulls can step aside, and we'll shift focus to the bearish alternative shown in chart 2. Thus, we should know soon enough which of these two is truly operable.

WARNING LEVELS are shown on the chart. Percentages (%) indicate the chance the uptrend is over.

WAVE LABEL KEY: BEARISH

[W-v]	[W-2]	87336	65000-67000
Intermediate Impulse	Minor Impulse	Invalidation level	Fib target zone

CURRENT WAVE POSITION

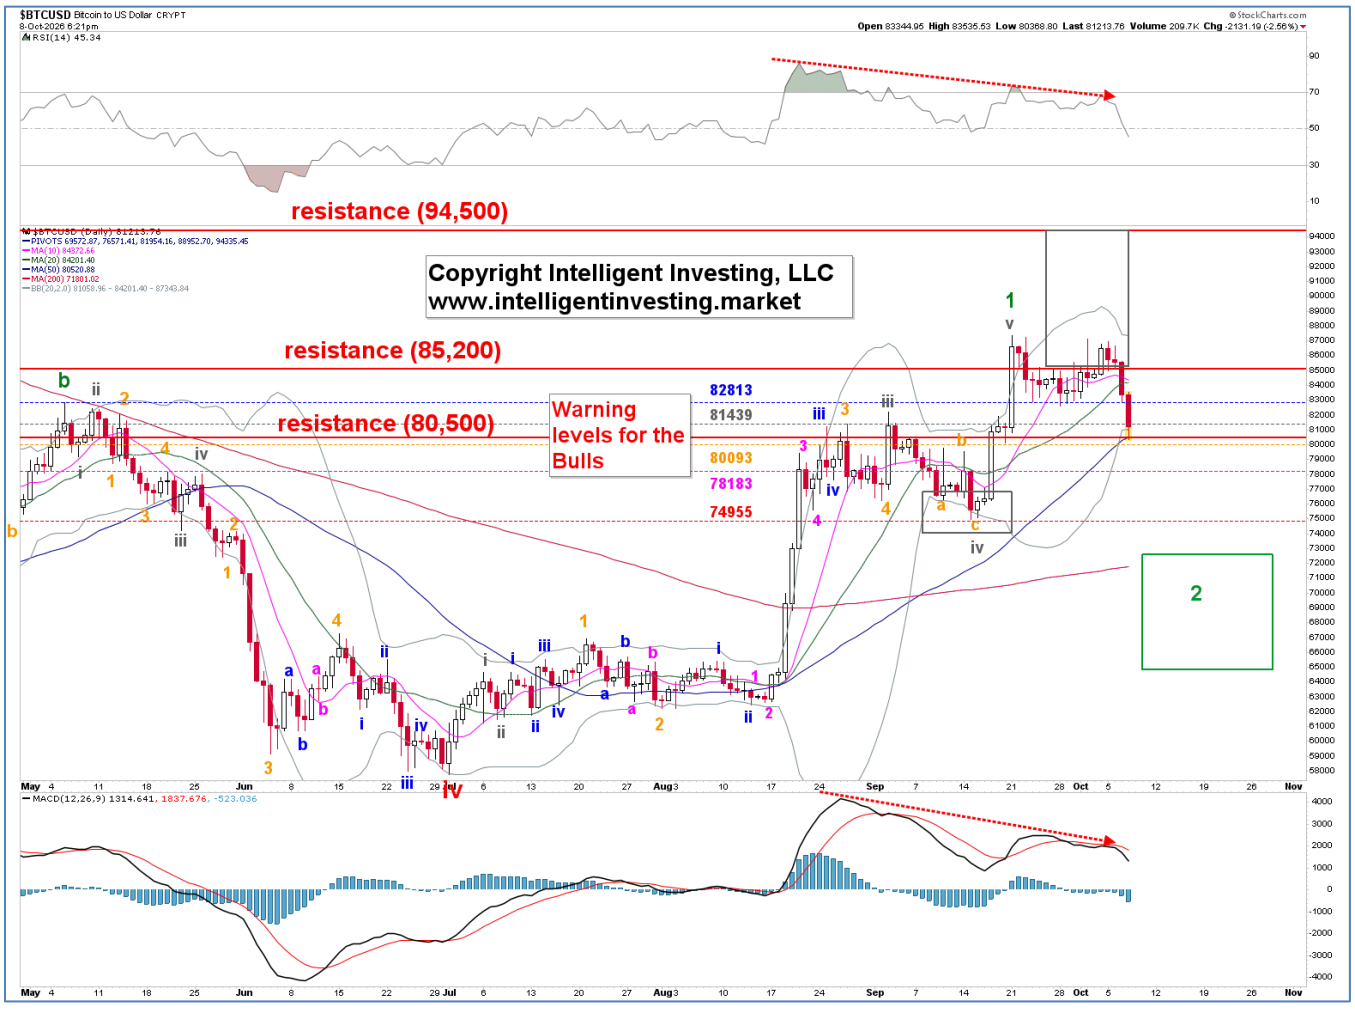

Today's price action shifts the odds in favor of the "***W-2** is underway*" EWP count. Technical indicators look weak, point down, and are on a sell, while BTC lost the 10d and 20d SMAs and is now testing its 50d SMA. Below it targets the 200d SMA at ~71K. Meanwhile, price is at the lower Bollinger band, and these bands are starting to expand: bearish. Thus, the bulls must step in soon to allow for one last rally (see ETH's chart 2), deeper into the $90K zone. But for now, that's a distant alternative.

WARNING LEVELS are shown on the chart. Percentages (%) indicate the chance the uptrend is over.

[W-5] Major Impulse Wave	**[W-i]** Intermediate Impulse	**[W-4,5]** Minor Impulse	**2358** Invalidation level	**$3000+/-50** Fib target zone

CURRENT WAVE POSITION

Ethereum is right at the lower end of the ideal **W-4** target zone and must hold above $2358 to allow for a final **W-5** higher. But ETH has already tagged the $2427 level, thus increasing the odds the **W-i** top is in. Meanwhile, technical indicators remain weak and point down: bearish. Insult to injury, price is at the lower Bollinger band, and these bands are starting to expand, while ETH has also lost the 50d SMA as support. It can now target ~2$350 based on simple symmetry. Thus, the larger "***W-ii** is underway*" count is now preferred.

WARNING LEVELS are shown on the chart. Percentages (%) indicate the chance the uptrend is over.

WAVE LABEL KEY

[W-5]	[W-ii]	[W-c]	98.36	$78-84
Major Impulse wave	Intermediate Impulse	Minor Impulse	Invalidation level	Fib target zone

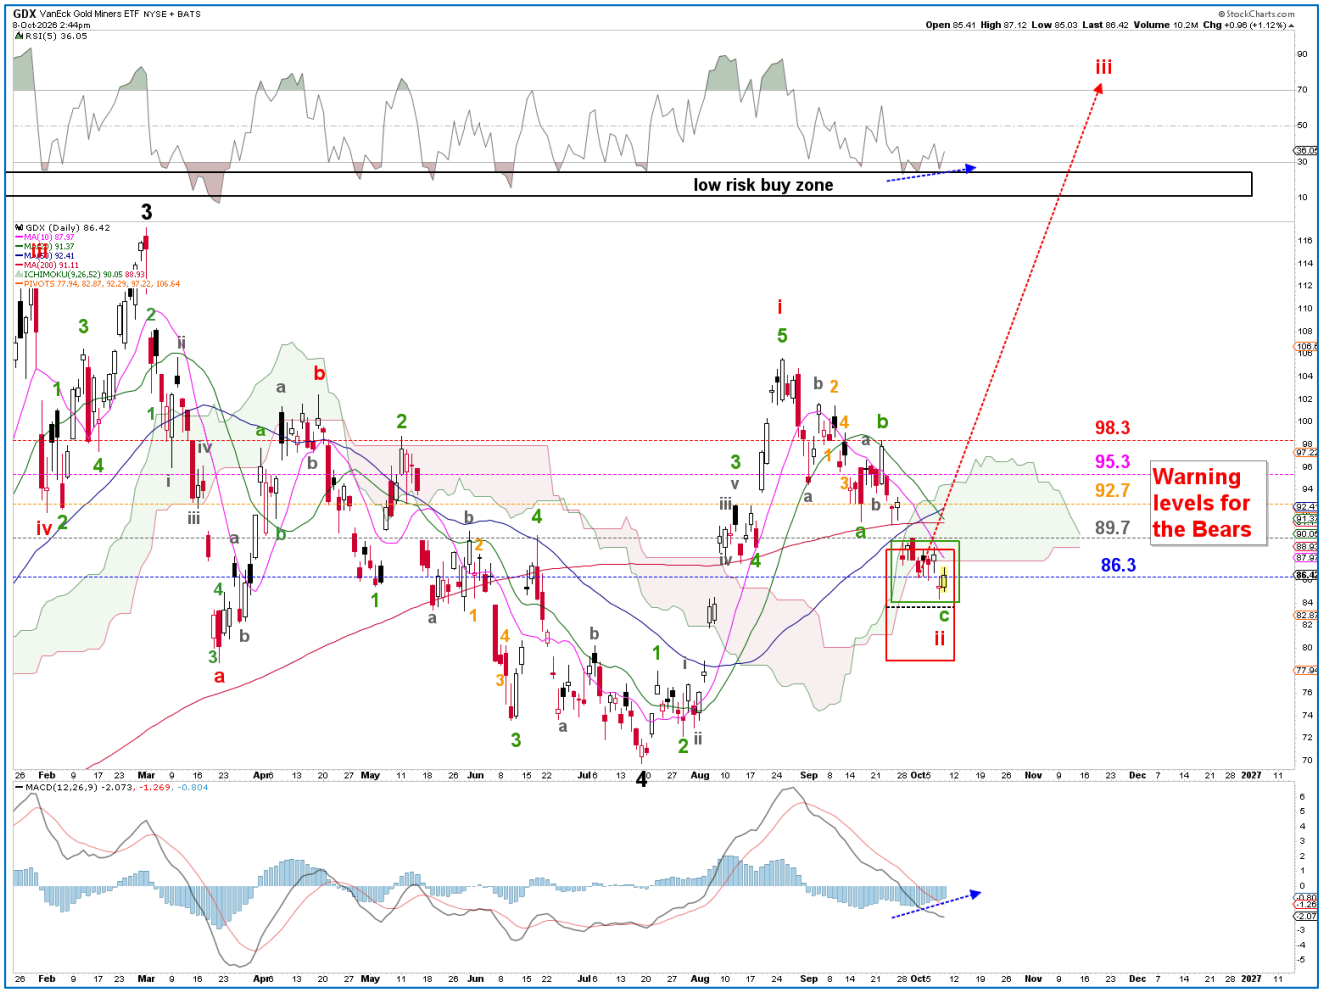

CURRENT WAVE POSITION

It has now reached the lower end of the ideal green **W-c** target zone, which is near the 61.80% retrace of **W-i** (black dotted horizontal line in the W-ii target box): classic! Meanwhile, there are more than enough waves in place to consider **W-c** (as **c=a**) complete, while the positive divergence on the daily RSI5 and MACD continues to build (**blue dotted arrows**). All while price is in the ideal green and red target zones. Thus, the setup is there, but price needs to confirm: a break above $92.7 will go a long way toward confirming **W-iii**.

WARNING LEVELS are shown on the chart. Percentages (%) indicate the chance the uptrend is over.

Major Impulse wave	Intermediate corrective	Minor corrective	Minute corrective	Invalidation level	Fib target zone

CURRENT WAVE POSITION

Yesterday's lower low in GOLD at $4066 brought it awfully close to that "*would look great with one lower low to around $4050*," while positive divergences (blue dotted arrows) continue to build as price remains in the ideal target zone for **W-ii**. Meanwhile, we can count five gray waves (**i, ii, iii, iv, v**) lower for the green **W-c** of **red W-ii**, while **W-iii** is subdivided into five orange waves (**1, 2, 3, 4, 5**). Classic and picture perfect! A break above $4316 will go a long way toward confirming the start of **W-iii**.

Silver continues to count well as a completed flat **wave-ii**, with an irregular flat **W-b** of **W-ii** in and by itself… Flat corrections end with a five-wave C-wave, which we have now! Yes, the **W-iv** did "*progress in a very complex manner*," as stated it could last, but here, as for GOLD, positive divergences are building while price is in the ideal **W-ii** target zone. A break above $65.08 will go a long way to confirm **W-iii**.

WARNING LEVELS are shown on the chart. Percentages (%) indicate the chance the uptrend is over.

CURRENT WAVE POSITION

The **W-4** we have been tracking may have been deeper and more complex than expected (an **a-b-c**), but overall both BRENT and WTIC can still support this wave count, as support holds and there's no critical overlap (we adjusted the **W-1** high for WTIC, see chart 2, which makes for an irregular flat **W-2**).

*BACKTESTED TRADING SYSTEM PERFORMANCES

Our new trading systems work best when you apply the compounding principle, which involves reinvesting some or all your profits into the next trade. The more you compound, the better the returns will be. Please review the tables below.

Do not trade positions bought without the system's signals using the system's trading signals. Additionally, please refrain from entering a position when the trade is already in progress; wait for a new trading signal.

These systems operate entirely independently of our analysis. Do not try to combine or correlate them. They track prices and trends across several parameters, triggering buy, sell, or hold signals based on if/then conditions. Sometimes our analysis is correct while the system is wrong, or vice versa. Or both can be right or wrong. Therefore, these systems complement our analyses and represent the ultimate trading experience: simply execute the signal. Refer to the previous page for what trading really is: a mindless, boring process of execution. Nothing more, nothing less.

The code for these trading systems is available for purchase. Please contact us for pricing details. It is written in Pine Script and can be integrated directly with TradingView, Alpaca, or Interactive Brokers (IBKR), enabling it to manage all your trading needs. Any AI, such as GROK or ChatGPT, can quickly translate code into another language if necessary.
