JOIN ME ON PEAKBOT*

THANK YOU TO ALL OF THOSE WHO ALREADY JOINED ME ON PEAKBOT. SO FAR, I AM DOWN ~$2000 IN CLOSED TRADES SINCE INCEPTION ON JULY 17!

Trade what I trade, without lifting a finger, by connecting your brokerage account through PeakBot to my account: https://peakbot.com/intelligent-investing-bot/. **Starting at $197/month**.

My goal is to average ~$100/day, which is ~$500/week and ~$2,000/month, while knowing full well that not all market environments are conducive to those returns.

My strategy gives the market time to validate my Elliott Wave thesis and avoids being a victim of options' time decay (theta) when wrong. I trade at most 3x per day; positions are rarely >50% of my portfolio; I average down at most 2x (e.g., at the 3rd and 5th waves); and I hedge-trade around a core position if necessary (e.g., at the 2nd and 4th waves). Most trades are swing- or intra-day**.**

[W-3] Major Impulse Wave	[W-b] Intermediate Impulse	[W-a] Minor Impulse	54744 Invalidation level	53250+/-500 Fib target zone

CURRENT WAVE POSITION

No changes from yesterday as the DOW has essentially gone sideways over the last 3-4 days. Note the NYSE is doing much better and formed a bullish reversal candle today, from around the 62% retracement of the recent four-day rally. Meanwhile, its MACD recently gave a buy signal. Thus, a breakout targets 24500+/-200. That will align with the gray W-c target zone for the DOW.

WARNING LEVELS are shown on the chart. Percentages (%) indicate the chance the downtrend is over.

CURRENT WAVE POSITION

There's still too little price data to differentiate between the two options, but the general direction for now should be higher, even with the last two days' pullback, if only for blue **W-v** of orange **W-c** -in the form of an overlapping ending diagonal- of gray **W-v**, etc., which should ideally reach ~7910. Thus, as stated yesterday, "[*Tuesday's] high at 7844 seems to have fallen short, allowing for a subdividing upside move";* this subdivision is what we're most likely seeing now.

WARNING LEVELS are shown on the chart. Percentages (%) indicate the chance that the uptrend is over.

CURRENT WAVE POSITION

Still nothing is out of the ordinary as the index topped at the ideal W-iii of W-3 level on Tuesday and has reached the ideal W-iv of W-3 zone. But, the bulls must hold the line and rally price above Tuesday's high to seal the W-v of W-3 move to 14250+/-250. A drop below 12,200 and especially 12,016 will not be a good sign and will shift the odds in favor of the bearish wave count (chart 2)

CURRENT WAVE POSITION

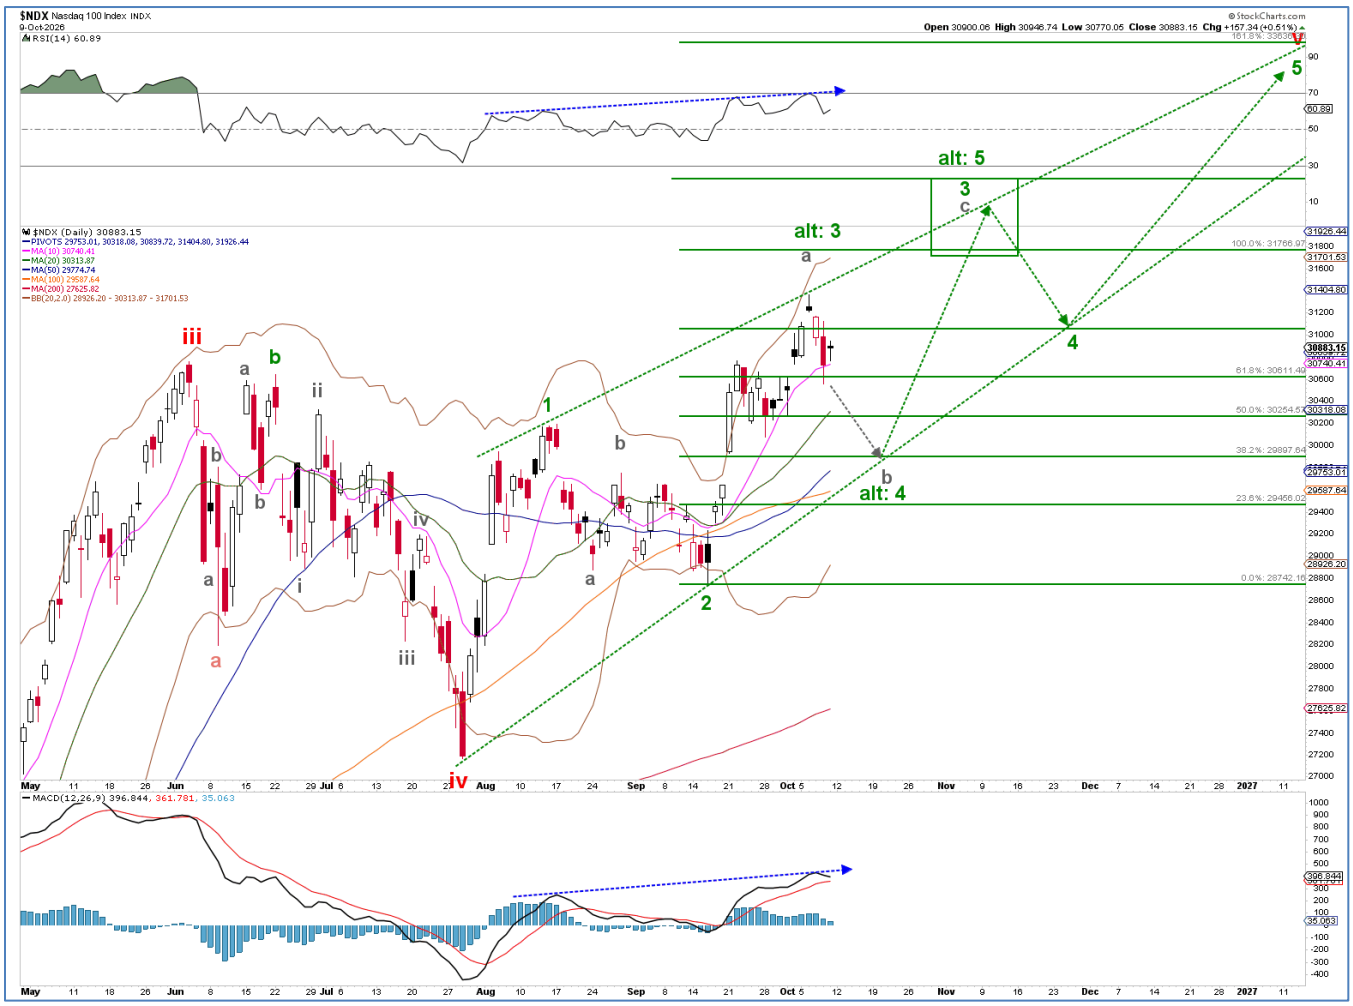

Going to play devil's advocate and show a possible, larger ending diagonal forming on the NDX. It's a possibility, not a certainty. I'm posting this option also because the nested **1,2,i,ii,1,2,i,ii** setup (as shown for the SPX in chart 1) is almost too obvious. Anyone with a basic understanding of the EWP sees it, and that's almost too easy. Not that it's impossible. We keep it on our radar because several market breadth indicators still have room to grow, but markets aren't always that easy.

Besides, I can't recall when a nested 1-2 setup like this materialized. Maybe it will now, and that would be great. But this large ED will fool most, including those who think the SPX option in chart 2 is operable. Instead of the big flush for the larger **W-4**, all we get is a smaller **W-4** retrace… So we must keep an eye out for it; it can signal near-term weakness (**W-b**) for the NDX while the DOW/SPX continue to rally, aka sector rotation.

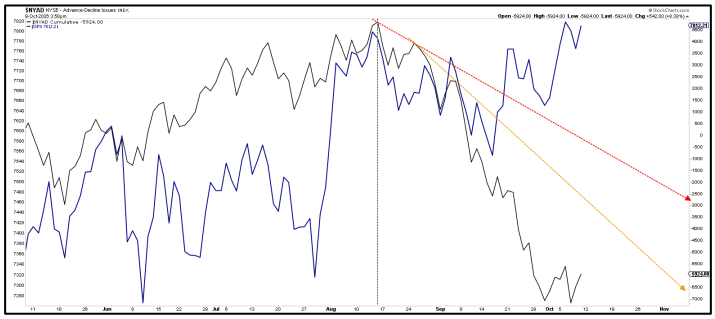

WARNING LEVELS are shown on the chart. Percentages (%) indicate the chance the uptrend is over.

ELLIOTT WAVE Charts With Key Technical Indicators

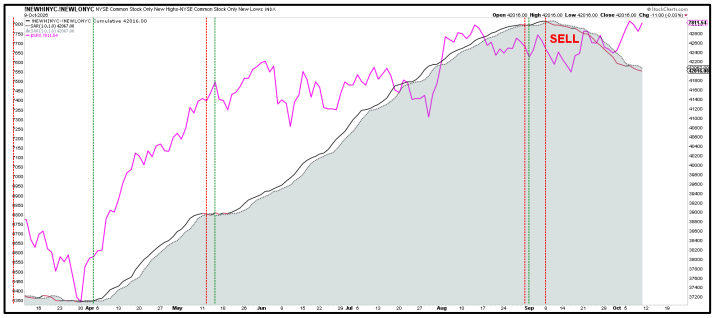

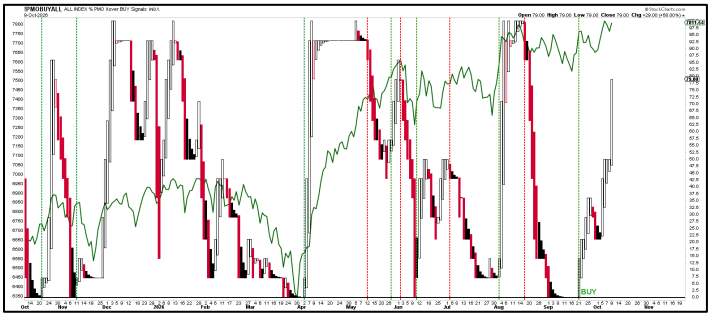

The most important market breadth indicator, the NYAD, has a lot of catching up to do and is not confirming the SPX's ATHs (and NAS/NDX); neither is the SPX's AD line, whose weekly chart is more akin to late-2024 to early-2025 (black circle, solid arrows). However, prior divergences have been erased (red circles, dotted circles). **BEARISH**

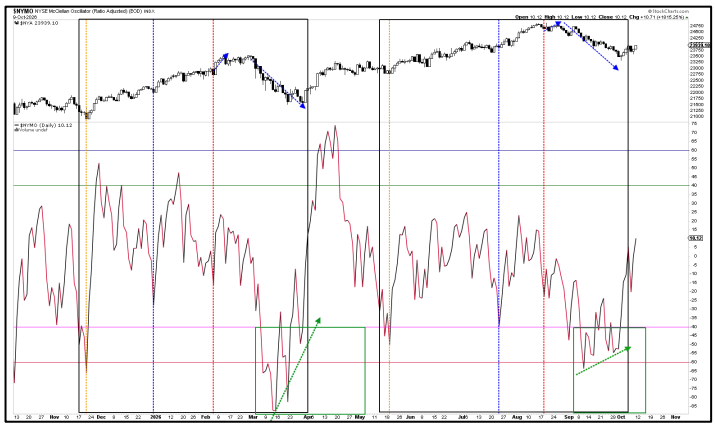

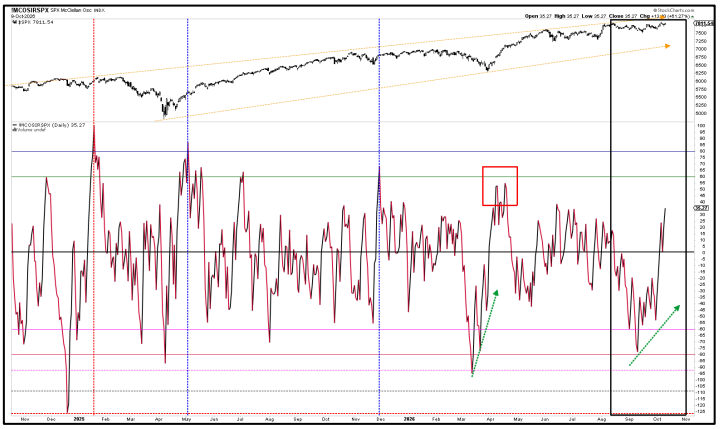

Meanwhile, the 52w new high-based intermediate-term trend indicator remains a sell signal, while the short-term trend indicator (PMO buyall) remains a buy and is racing toward topping out.

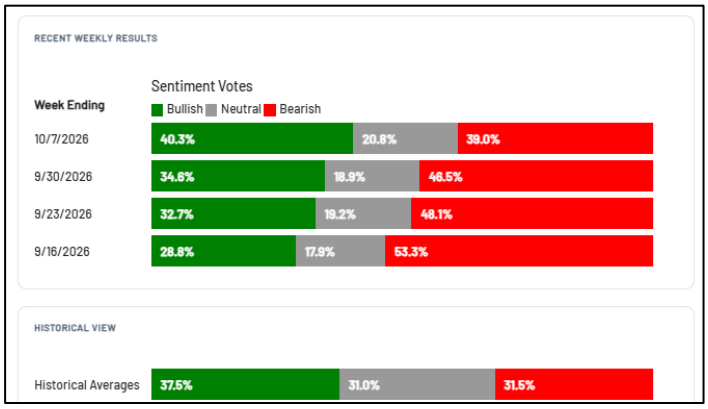

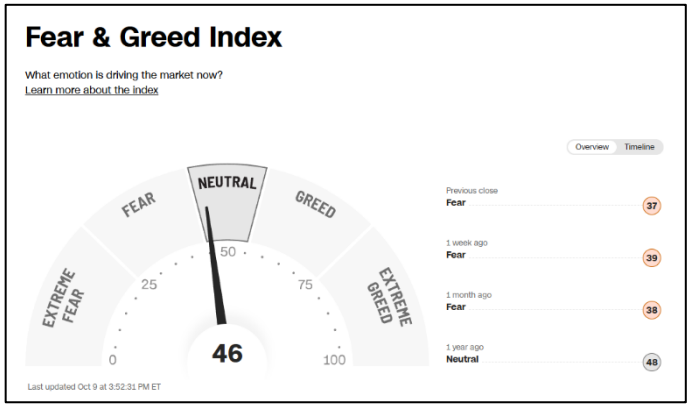

The NYMO printed its 2nd positive day since it turned negative on August 16; it still has a lot to catch up. We'll monitor it to see if it can reach (at least) the 70s, like April, but preferably >90 to signal a bigger advance is underway. The SPXMO looks a bit healthier, and also here we'll have to see if it can at least reach >60, but preferably >80, to signal a larger uptrend is underway. But note that such spikes can coincide with the final 5th waves (early and late 2025)

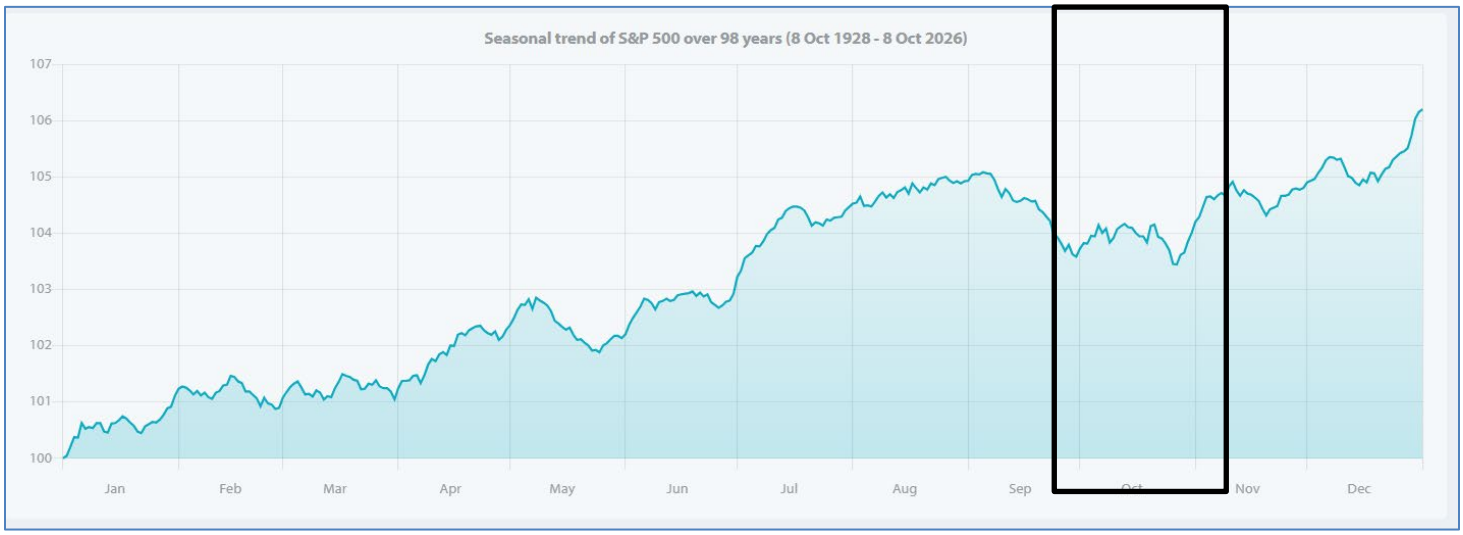

Individual investor sentiment is quickly turning more Bullish, which can be a contrarian indicator. Not shown here, but active money managers (NAAIM) not shown) are above average invested (86% vs 74%), which is not too crazy, as >100 often coincides with (local) tops. Meanwhile, the more technically derived, not-a-true-opinion Fear and Greed index is now back in Neutral territory. **NEUTRAL**

Lastly, seasonality is reasonably back on track. It had a low -on a closing basis- due 09/30. We got 09/30 (technically 10/01). A high 10/06. We got 10/06 (both on a closing basis and actual high). Then a low is due, on average, on 10/09; we got 10/08. A high is due around 10/13, a low around 10/19, followed by another high and low around 10/21 and 10/26, respectively.

WAVE LABEL KEY

[W-V]	[W-2]	57739	70,500+/-5000
PRIMARY Impulse	Major Impulse	Invalidation level	Fib target zone

CURRENT WAVE POSITION

Today we are showing the weekly chart with an overall one-degree-higher wave count. I.e., the July low was the primary **W-IV** instead of a Major **W-4**, and thus the recent high was **W-1** of **W-V** instead of **W-i**. But don't worry too much about the nomenclature; we could also label it "*kashkasjdhjks W-1*," AKA "Potato vs. Potato."

What matters is that we can count five (**red**) waves up from the July low to the recent high by using weekly closing prices, with the 2nd and 4th waves being down weeks. In fact, this allows us to count five smaller (green) waves within **W-iii**. CLASSIC!

This supports our thesis that **W-2** is underway, unless also **W-v** subdivides, to ideally $70,500+/-5000. Both the lower and higher ends are support levels.

WARNING LEVELS are shown on the chart. Percentages (%) indicate the chance the uptrend is over.

[W-5] Major Impulse Wave	**[W-i]** Intermediate Impulse	**[W-4,5]** Minor Impulse	**2358** Invalidation level	**$3000+/-50** Fib target zone

CURRENT WAVE POSITION

Ethereum is still right at the lower end of the ideal **W-4** target zone and must hold above $2358 to allow for a final **W-5** higher. But ETH has already tagged the $2427 level, thus increasing the odds the **W-i** top is in. Meanwhile, technical indicators remain weak and point down: bearish. To make matters worse, price is at the lower Bollinger band, and the bands are starting to expand, while ETH has also lost the 50d SMA as support. It can now target ~2$350 based on simple symmetry. Thus, the larger "***W-ii** is underway*" count is now preferred.

WAVE LABEL KEY

[W-5]	[W-iii]	[W-1]	84.36	$150+/-5
Major Impulse wave	Intermediate Impulse	Minor Impulse	Invalidation level	Fib target zone

CURRENT WAVE POSITION

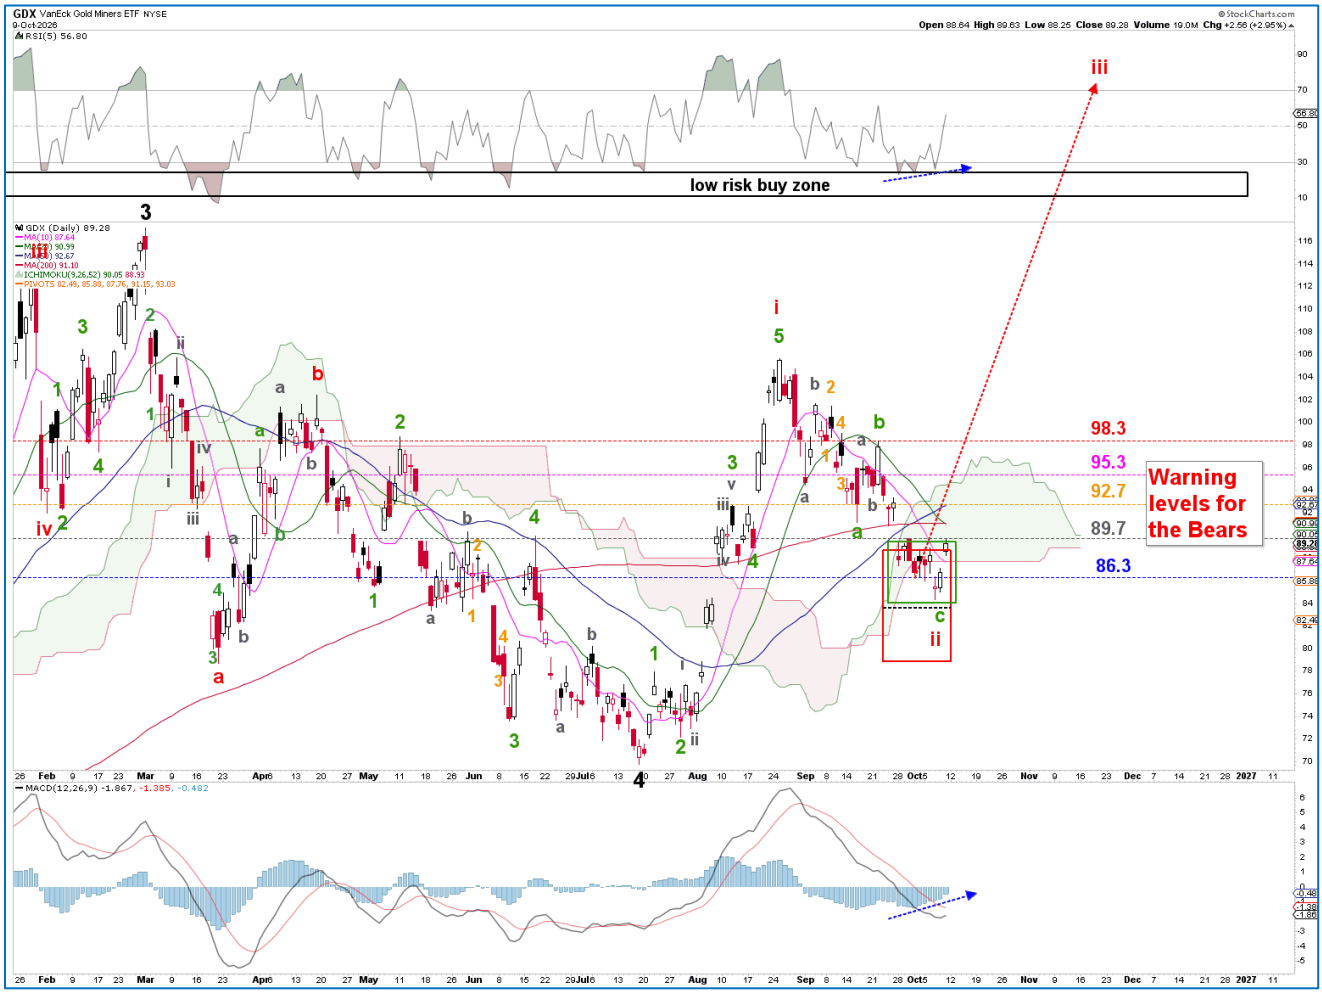

Yesterday we found that "*the setup** is there, but price needs to confirm: a break above $92.7 will go a long way toward confirming **W-iii**.*" Thus, today's follow-through to the upside is a good confirmation of our bullish thesis, but the Bulls are not out of the woods just yet. But for as long as this week's low hold we can assume **W-iii** is under way.

***It has now reached the lower end of the ideal green **W-c** target zone, which is near the 61.80% retrace of **W-i** (black dotted horizontal line in the **W-ii** target box): classic! There are more than enough waves in place to consider **W-c** (as **c=a**) complete, while the positive divergence on the daily RSI5 and MACD continues to build (**blue dotted arrows**). All while price is in the ideal green and red target zones*

CURRENT WAVE POSITION

Yesterday, we found that "…*positive divergences (blue dotted arrows) continue to build as price remains in the ideal target zone for **W-ii**. Meanwhile, we can count five gray waves (i, ii, iii, iv, v) lower for the green **W-c** of **red W-ii**, while W-iii is subdivided into five orange waves (1, 2, 3, 4, 5). Classic and picture-perfect! A break above $4316 will go a long way toward confirming the start of **W-iii**.*" While we did not get that far today, the stars are well aligned for a low. Thus, as long as this week's low holds, we can allow for the **W-iii**.

The same goes for SILVER, which bottomed right at the 76.40% retracement of **W-i**, and although it also has not broken above its key level ($65.08), which will go a long way to confirm **W-iii,** we can state the same "*as long as this week's low holds, we can allow for the **W-iii***."

CURRENT WAVE POSITION

UCO and USO are in two different wave counts on the smaller time frames, but in the same in the bigger picture. Last, we found that UCO would target the blue target zone as an ending diagonal **W-ix**, which it now has. Thus, a smaller 4th-wave pullback is most likely imminent. Meanwhile, USO appears still to be at the starting gates of **W-5**. Hence, clear UCO is not USO, similarly, as BRENT is not WTIC.

*BACKTESTED TRADING SYSTEM PERFORMANCES

Our new trading systems work best when you apply the compounding principle, which involves reinvesting some or all your profits into the next trade. The more you compound, the better the returns will be. Please review the tables below.

Do not trade positions bought without the system's signals using the system's trading signals. Additionally, please refrain from entering a position when the trade is already in progress; wait for a new trading signal.

These systems operate entirely independently of our analysis. Do not try to combine or correlate them. They track prices and trends across several parameters, triggering buy, sell, or hold signals based on if/then conditions. Sometimes our analysis is correct while the system is wrong, or vice versa. Or both can be right or wrong. Therefore, these systems complement our analyses and represent the ultimate trading experience: simply execute the signal. Refer to the previous page for what trading really is: a mindless, boring process of execution. Nothing more, nothing less.

The code for these trading systems is available for purchase. Please contact us for pricing details. It is written in Pine Script and can be integrated directly with TradingView, Alpaca, or Interactive Brokers (IBKR), enabling it to manage all your trading needs.
