JOIN ME ON PEAKBOT*

THANK YOU TO ALL OF THOSE WHO ALREADY JOINED ME ON PEAKBOT. SO FAR, I AM DOWN ~$1970 IN CLOSED TRADES SINCE INCEPTION ON JULY 17!

Trade what I trade, without lifting a finger, by connecting your brokerage account through PeakBot to my account: https://peakbot.com/intelligent-investing-bot/. **Starting at $197/month**.

My goal is to average ~$100/day, which is ~$500/week and ~$2,000/month, while knowing full well that not all market environments are conducive to those returns.

My strategy gives the market time to validate my Elliott Wave thesis and avoids being a victim of options' time decay (theta) when wrong. I trade at most 3x per day; positions are rarely >50% of my portfolio; I average down at most 2x (e.g., at the 3rd and 5th waves); and I hedge-trade around a core position if necessary (e.g., at the 2nd and 4th waves). Most trades are swing- or intra-day**.**

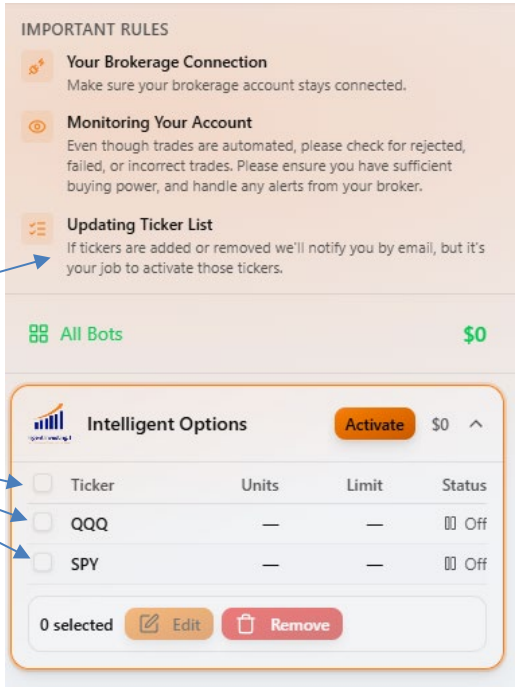

Requirements:

- $10K investment minimum
- Tradier, Schwab, or Tasty Trade account

DOW JONES INDUSTRIAL AVERAGE (DOW) & NYSE

Outlook: Medium-term (weeks to ~6 months) BULLISH. Short-term (days to ~2 weeks) BULLISH

WAVE LABEL KEY: BULLISH COUNT (CHART 1)

[W-3] Major Impulse Wave	[W-viii, ix] Intermediate Impulse	[W-1,2,3,4,5] Minor Impulse	50546 Invalidation level	57500+/-500 Fib target zone

WAVE LABEL KEY: BEARISH COUNT (CHART 2)

[W-3] Major Impulse Wave	[W-b] Intermediate Corrective	[W-a,b,c] Minor Corrective	54744 Invalidation level	52400+/-100 Fib target zone

CURRENT WAVE POSITION

No change to our perspective: the POTENTIAL larger ending diagonal (ED) structure for **W-ix** shown in chart 1 is filling in reasonably well, as projected by the grey lines. But remember, EDs are tricky, so be very flexible and open-minded. The bounce option is shown in chart 2 and could have completed, but a more subdivided **W-b** "feels" more normal and likely; i.e., a 2-month-long **W-a** is likely not retraced with a 2-week-long bounce (**W-b**); thus, yesterday's high was then **W-a,** now **W-b** is underway, to be followed by **W-c** to ideally 52750-53250, possibly as high as 53750-54250. **W-b** should ideally target 51000-400, which has been reached. A break above yesterday's high then confirms **W-3/c.**

WARNING LEVELS are shown on the chart. Percentages (%) indicate the chance the downtrend is over.

WAVE LABEL KEY FOR THE SMALLER ENDING DIAGONAL (CHART 2)

[W-3] Major Impulse	**[W-c]** Intermediate Impulse	**[W-5]** Minor Impulse	[W-v] Minute Impulse	[W-c] Micro Impulse	[W-a,b,c] Nano Impulse	**7616** Invalidation level	~7910 Fib target zone

CURRENT WAVE POSITION

The nested 1,2, i,ii, 1,2, i,ii, 1,2 setup is off the table, which is no surprise given the issues we had with it. Thus, the larger ED we introduced on Monday, shown in chart 1, was already gaining validity yesterday, as we can apply this price action to all indices (DOW, SOX, and SPX), and even more so today. Hence, W-c of W-iii of W-5, etc is subdividing, contingent on holding above 7616. The smaller ED we've been tracking remains on the table too, as shown in chart 2, also with a subdividing W-c underway. Remember that because EDs are all three-wave patterns (a-b-c), they are much harder to forecast than a non-overlapping impulse. Expect many unexpected twists and turns. The 2nd alternative and least likely pattern (not shown) is that the larger **W-3** is in place for a highly unorthodox ending diagonal. It requires a break below 7507 to confirm this path.

WARNING LEVELS are shown on the chart. Percentages (%) indicate the chance that the uptrend is over.

CURRENT WAVE POSITION

Like the DOW, our perspective hasn't changed despite today's price action: the POTENTIAL larger ending diagonal (ED) structure for **W-v** shown in chart 1 is filling in reasonably well, as projected by the dotted lines. But remember, EDs are tricky, so be very flexible and open-minded. The bounce option is shown in chart 2 and could have completed. Note that, unlike the DOW, the bounce (**W-b**) for this index is much more proportionate in price and time than the **W-a**. As such, we expect a potential DOW bounce to also become protracted. A break below 11000 is needed to confirm this option. However, remember that seasonality (see Friday's update) is bullish starting in late October.

WARNING LEVELS are shown on the chart. Percentages (%) indicate the chance the uptrend is over.

CURRENT WAVE POSITION

The nested **1,2**, **i,ii**, **1,2**, setup is off the table due to critical overlap, which is no surprise given the issues we had with it. Thus, the larger ED we introduced on Monday, shown in chart 1, was already gaining validity yesterday, as we can apply this price action to all indices (DOW, SOX, and NDX), and even more so today. Hence, **W-3** is subdividing, contingent on holding above 28753. The index has now reached the ideal **W-b** of the **W-3** target zone, and tagging the green 23.60% level at ~29460 would be ideal, as **W-c** = **W-a** could then target the 123.60% extension. Remember that because EDs are all three-wave patterns (a-b-c), they are much harder to forecast than a non-overlapping impulse. Expect many unexpected twists and turns. There has been no negative divergence between the August, September, and October highs (blue arrows) on either the RSI or MACD, suggesting higher prices; i.e., the indicators confirmed the higher prices.

Alternatively, the larger **W-3** is in place for a somewhat unorthodox, albeit possible, irregular **b**-wave. In that case, **W-1** of **W-c** is now underway to ideally ~29650, followed by a **W-2** to ~30600+/-100, etc.

WARNING LEVELS are shown on the chart. Percentages (%) indicate the chance the uptrend is over.

CURRENT WAVE POSITION

Last week's low did NOT hold, ☹ so **W-iii** is NOT underway, as stated yesterday "*If [that low does] not [hold], we look for $4000 and $57 before the Bulls can try again*…"

SILVER even broke below that $57 level, and we need to re-assess its wave count, as the five waves up from the July 17 low are now almost 100% retraced, which means that rally was a larger c-wave of a larger B-wave flat… very tricky. But it also means the correction is almost over, as the current decline is then the final decline. We'll provide an updated chart on Friday.

*BACKTESTED TRADING SYSTEM PERFORMANCES

Our new trading systems work best when you apply the compounding principle, which involves reinvesting some or all your profits into the next trade. The more you compound, the better the returns will be. Please review the tables below.

Do not trade positions bought without the system's signals using the system's trading signals. Additionally, please refrain from entering a position when the trade is already in progress; wait for a new trading signal.

These systems operate entirely independently of our analysis. Do not try to combine or correlate them. They track prices and trends across several parameters, triggering buy, sell, or hold signals based on if/then conditions. Sometimes our analysis is correct while the system is wrong, or vice versa. Or both can be right or wrong. Therefore, these systems complement our analyses and represent the ultimate trading experience: simply execute the signal. Refer to the previous page for what trading really is: a mindless, boring process of execution. Nothing more, nothing less.

The code for these trading systems is available for purchase. Please contact us for pricing details. It is written in Pine Script and can be integrated directly with TradingView, Alpaca, or Interactive Brokers (IBKR), enabling it to manage all your trading needs. Any AI, such as GROK or ChatGPT, can quickly translate code into another language if necessary.
