JOIN ME ON PEAKBOT*

THANK YOU TO ALL OF THOSE WHO ALREADY JOINED ME ON PEAKBOT. SO FAR, I AM DOWN ~$2005 IN CLOSED TRADES SINCE INCEPTION ON JULY 17!

Trade what I trade, without lifting a finger, by connecting your brokerage account through PeakBot to my account: https://peakbot.com/intelligent-investing-bot/. **Starting at $197/month**.

My goal is to average ~$100/day, which is ~$500/week and ~$2,000/month, while knowing full well that not all market environments are conducive to those returns.

My strategy gives the market time to validate my Elliott Wave thesis and avoids being a victim of options' time decay (theta) when wrong. I trade at most 3x per day; positions are rarely >50% of my portfolio; I average down at most 2x (e.g., at the 3rd and 5th waves); and I hedge-trade around a core position if necessary (e.g., at the 2nd and 4th waves). Most trades are swing- or intra-day**.**

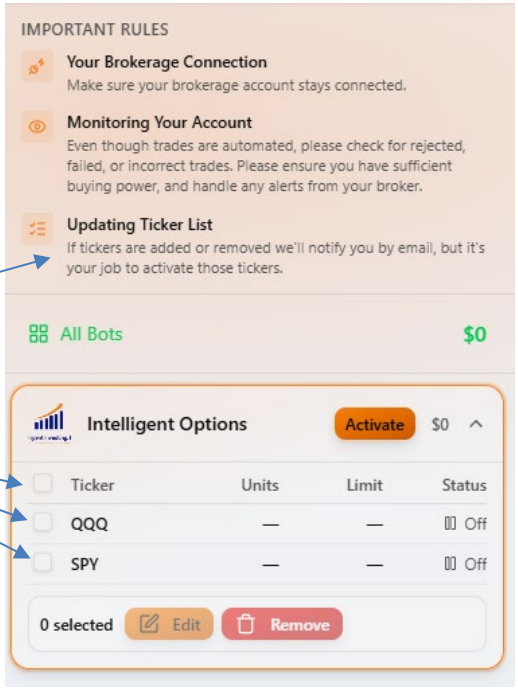

Requirements:

- $10K investment minimum
- Tradier, Schwab, or Tasty Trade account

CURRENT WAVE POSITION

The potential **W-1** as a leading diagonal has reached its ideal 52,700-900 target zone but there are no signs of a reversal (**W-2**) yet. The alternative is the ongoing **W-b** to about 53,500 +/- 500, which must be followed by a break below the October 6 low to unlock the mid- to high-40,000s.

Yesterday we also mentioned a 2nd alternative (chart 3 next page): "***W-3*** *could already be underway. If the index stays above 51,846, it can move higher more directly.*" So far it is doing this, and we can raise that level to 52,209. If we don't see a reversal soon, this count will become our preferred path.

WARNING LEVELS are shown on the chart. Percentages (%) indicate the chance the downtrend is over.

Outlook: Medium-term (weeks to ~6 months) BULLISH. Short-term (days to ~2 weeks): NEUTRAL

WAVE LABEL KEY

[W-3] Major Impulse	[W-c] Intermediate Impulse	[W-5] Minor Impulse	[W-v] Minute Impulse	[W-c] Micro Impulse	7507 Invalidation level	8000-8125 Fib target zone

CURRENT WAVE POSITION

Yesterday we shared two short-term diagonal options, one with a detour (first a bit higher to ~7810) before heading down to 7700+/-20, the other with "*a more immediate decline to that 7700+/-20 level from where the next rally can start.*" Thus, all roads led to 7700+/-20, and today we got that immediate decline, and to as low as 7637! So far so good, and although the decline was only 0.56% deeper than expected, it strongly suggests the short-term diagonal pattern morphed into an a-b-c for a subdividing W-b of W-b.

We now have enough scribbles in place to consider the (extremely complex) W-b complete, while the index keeps adhering to the diagonal pattern's lower trend line on a closing basis. Thus, the intermediate-term diagonal pattern is still alive and well.

We can allow for a drop to as low as 7580, while the bears are in serious trouble above yesterday's high (7740). Below 7507, we must adopt a more bearish intermediate-term count, but we remain bullish long term. However, as shown in the seasonality and market breadth section (which aligns with Larry William's POV in yesterday's video), a year-end rally is likely around the corner. This also matches the SOX and NDX completing their five-wave decline, while the DOW could already be in its 3rd of the 9th wave.

WARNING LEVELS are shown on the chart. Percentages (%) indicate the chance that the uptrend is over.

CURRENT WAVE POSITION

Full focus is now on completing the **C**-wave of the larger **4th** wave, which is morphing into a zigzag, most often a 5-3-5 pattern. The ideal target is around the 200d SMA, as that's where **c = 0.618 to 0.764x a** resides.

WAVE LABEL KEY: chart 1

[W-4] Major Corrective	[W-c Intermediate Impulse	[W-5] Minor Impulse	31361 Invalidation level	27000+/-1000 Fib target zone

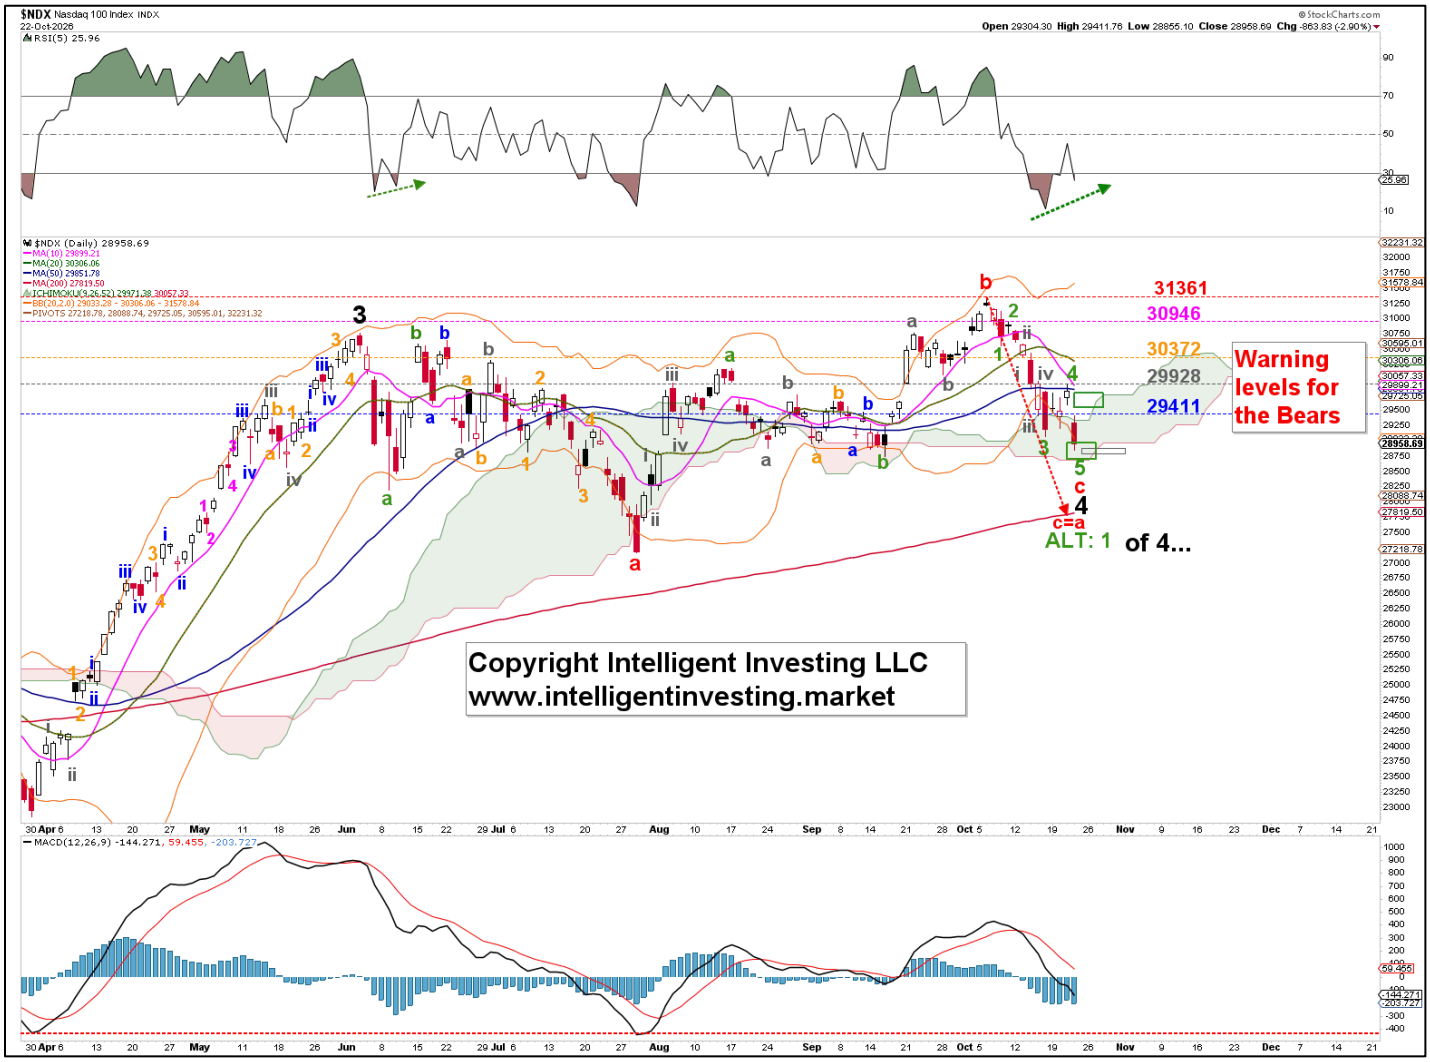

CURRENT WAVE POSITION

Full focus is now on the completion of the **C**-wave of the larger 4th wave, which is morphing into an irregular, running flat in a five-wave fashion in five green waves (**W-3** and **4** are complete and **5** is underway)). Flat corrections are 3-3-5 patterns, which would match the price action since the May high. Note that these five waves lower **can** be only **W-1** of **W-c** of **W-4**… Regardless, when **W-5** completes, we must expect at least a sizeable bounce (5-7%), but based on seasonality, etc. we prefer a multi-month rally (**W-5**).

WARNING LEVELS are shown on the chart. Percentages (%) indicate the chance the uptrend is over.

ELLIOTT WAVE DAILY Chart With Key Technical Indicators

SEASONALITY & MARKET BREADTH (BULLISH)

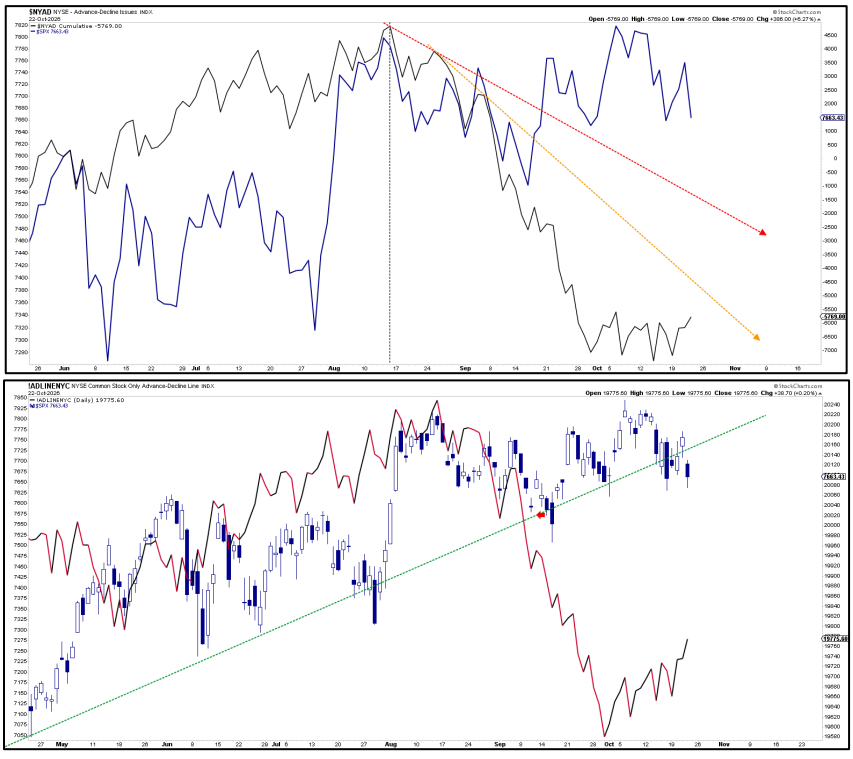

Seasonality supports the bullish case. The index tends to decline from October 21 through October 27, followed by an almost yearlong rally*. See below. More importantly, despite a down day of over 1% in the SPX, its cumulative advancing/declining (A/D) line increased, meaning more stocks advanced than declined, as most selling was confined to the technology sector and was not broad-based.

***The seasonal pattern has been on track for October**: A low was due on 09/30 (on a closing basis). The index bottomed on 09/30 (technically 10/01). A high was due on 10/06. The SPX topped out on 10/06 (both on a closing basis and as the actual high). Then, on average, a low was due around 10/09; the index bottomed on 10/08. Seasonally, a high comes in around 10/13, followed by a low around 10/19, then another high and low around 10/21 and 10/27, respectively. We got the high on 10/12 (but not on a closing basis), and the decline ended on 10/16, with a top yesterday on 10/21. Now the final decline is here.*

The SPX's A/D line is about to test its major (red, dotted) downtrend line in place since its August high. A break above that line will strongly signal that the A/D's downtrend, and, with it, the market's downtrend, has ended.

Also, the NYSE' Cumulative A/D line and the Common Stock Only Cumulative A/D line increased today. As did JUNK bonds, which trade as high-risk stocks. Overall, under the hood, this paints a bullish picture.

*BACKTESTED TRADING SYSTEM PERFORMANCES

Our new trading systems work best when you apply the compounding principle, which involves reinvesting some or all your profits into the next trade. The more you compound, the better the returns will be. Please review the tables below.

Do not trade positions bought without the system's signals using the system's trading signals. Also, do not enter a position while a trade is already in progress; wait for a new trading signal.

These systems operate entirely independently of our analysis. Do not try to combine or correlate them. They track prices and trends across several parameters, triggering buy, sell, or hold signals based on if/then conditions. Sometimes our analysis is correct while the system is wrong, or vice versa. Both can be right or wrong. Therefore, these systems complement our analyses and represent the ultimate trading experience: simply execute the signal. Trading really is a mindless, boring process of execution. Nothing more, nothing less.

The code for these trading systems is available for purchase. Please contact us for pricing details. It is written in Pine Script and can be integrated directly with TradingView, Alpaca, or Interactive Brokers (IBKR), enabling it to manage all your trading needs. Any AI, such as GROK or ChatGPT, can quickly translate code into another language if necessary.
